

VALERY TRADING

Comprehensive EA's Set-up & Strategy Guide

Introduction

Welcome to the step-to-step setup instructions for my expert advisors. In this guide you'll find two main sections:

The first section is a general one, where I will walk you through on how to choose the correct broker to trade, choosing MetaTrader 4 or 5, installing EAs in your MetaTrader terminal and loading them on your trading charts as well as VPS information. Even though this section will be the most basic one, and you may already have experience with EAs and MetaTrader, I strongly recommend that you at least check it superficially to make sure you're not missing any important configuration steps (such as webrequest servers)

The second section is divided in 4 parts: one for each of my EAs. You'll find instructions specific to these expert advisors, a comprehensive list of EA parameters and options of use, recommended strategy for each EA, and some bonus tips and tricks

I will try to cover everything relevant to my expert advisors on this guide, but it is possible that you still have doubts or face some issues while installing, configuring or trading with them. Please, feel free to contact me anytime at valery@valerytrading.com and I will be more than happy to help you out

Best wishes,

Valeriia Mischenko

Top-rated MQL Developer

Table of contents

This is a summary of what you will find in this guide (feel free to skip any of the parts according to your level of expertise)

Here's what we are going to go through (you can click on each title to skip directly to that page):

- [Buying License](#)

General Section

Brokers selection

Broker selection is essential in case of night scalping. You need to have really good trading conditions during the rollover to profit from it. But how can you choose the broker?

There is a [service](#) that can help with that question. These are the best current options:

Brokers selection

The good brokerage options for night scalping (in order) are:

1. **IC Markets** (1st option, best conditions not only at night, but overall)
2. **Pepperstone** (almost as good, best option for big lot sizes)
3. **Tickmill** (good, but a bit worse than the previous two)
4. Pepperstone (best option for big lot sizes)
5. RannForex (small offshore broker, sometimes with the best trading conditions)
6. XM (very good trading conditions at night)
7. FIBO Group (also very good trading conditions at night)
8. MT.COOK (small, but capable broker for professionals)
9. ThinkMarkets
10. AxiTrader
11. Coinexx (offshore broker that accepts US citizens)

Please, do not try to use the EA on brokers with bad conditions during the rollover!
Although you will most probably get profit in the long run, your results will be much worse than users of the brokers listed above

Brokers selection

Once you've made your research and decided which broker (or brokers) you will be using for trading, you should then download their MetaTrader 4 or MetaTrader 5 platform, depending on what you prefer

In this example, I will be using MetaTrader 4 platform offered by IC Markets broker. To download it, I just went into the IC Markets website, created an account and downloaded/installed the MT4 on my pc

MetaTrader 4 vs MetaTrader 5

It doesn't matter much whether you use MetaTrader 4 (MT4) or MetaTrader 5 (MT5), as the trading algorithm behind the EAs is the same. All my expert advisors are available for both platforms

There are internal differences between platforms, but it's my work as the developer that you do not notice these

Also, there are sometimes different quotes in MT4 and MT5, but these differences are usually small and random

Most people prefer MT4, as more brokers support it. MT5 has a better tester, which I recommend to use. Please feel free to test for yourself both platforms and decide which one to use

Allowing web requests

The following step is to allow web requests. Here you will input certain URLs the expert advisor will be making requests in order to work correctly

In order to allow them, follow these steps:

1. On your MetaTrader platform, head to the menu on the header, place your mouse over the 'Tools' menu and left-click
2. Head down to the '**Options**' menu and left-click (you can simply press Ctrl+O and the same menu will open)

Allowing web requests

3. Head over to the 'Expert Advisors' tab on the top menu, and left click
4. Check the '**Allow WebRequest for listed URL**' box
5. Add the following URLs by clicking on the green '+' symbol and copy-pasting one by one :
 - <https://ec.forexprostools.com>
 - <https://www.worldtimeserver.com>
 - <http://timesrv.online>
 - <http://valeryservice.com>
5. Left click on the 'OK' button

Once again, make sure that this option is enabled, as without it, the expert advisor will not be able to work

Enabling automated trading

Once you've installed your preferred broker MetaTrader 4 or 5 platform on your PC and opened an account, it's time to get the EA ready

Your first step will be to enable auto trading on your MetaTrader platform:

To do so, follow the next steps:

1. On your MetaTrader platform, head to the menu on the header place your mouse over the 'Tools' menu and left-click
2. Head down to the '**Options**' menu and left-click (you can simply press Ctrl+O and the same menu will open)

Enabling automated trading

3. Head over to the 'Expert Advisors' tab on the top menu, and left click.
4. Check the '**Allow automated trading**' box
5. Left click on the 'OK' button

And that 's it!

Make sure that this option is enabled, as without it, the expert advisor will not be able to places trades automatically on your account

Installing the Expert Advisors (EAs)

It's time now to install the EA on your MetaTrader terminal

Your Expert Advisors are visible on the **navigator** on the left-hand side of the MT terminal. In case you do not see it on your screen, open it by pressing CTRL+N

Once you've located your navigator, follow these steps:

1. Press F4 to open the MetaEditor
2. Locate the 'Experts' folder on the left hand side of the MetaEditor window
3. Right click on the 'Experts' folder and click on 'Open folder'

Installing the Expert Advisors (EAs)

Once you click on 'Open folder' a folder containing all of your terminal's Expert Advisor files will open

What you need to do now is simply drag or copy & paste the your .ex4 or .ex5 Expert Advisor file (depending if you're using MetaTrader 4 or MetaTrader 5 platform) to this folder, and close it

Installing the Expert Advisors (EAs)

Once drag or paste the EA file into your Experts folder, head back again to your MetaTrader terminal and follow these steps:

1. Go to your navigator and place your mouse above the Expert Advisors menu
2. Right click on the Expert Advisors menu
3. Click on '**Refresh**'
4. Your Expert Advisor will now appear below the Expert Advisors menu

Opening a chart

The next step is to open a market chart where you will later load the EA in order to trade. To do so head over to the icons menu on the top of your MetaTrader terminal and click on the 'Open a new chart' one:

A list of the major FX currency pairs will be displayed now. According to the EA you're using and strategy, the pairs you choose will vary. For this example, I will open a EURUSD chart

The next step will be to define a timeframe for this chart. To do so, head over to the menu above the chart and choose your desired timeframe, which range from M1 (one minute) to MN (monthly, and select the one you want to work with

Again, time frame varies with each EA and strategy, but for this example, I will be setting it up on M5 (five minutes)

Loading the EA into the chart

Once your chart is set up, you're now ready to load your Expert Advisor into it

Doing it is really simple: just click on the EA name on the 'Experts' menu inside the navigator, and **drag** it to the chart

Once you drop the EA on the chart, a window with the following tabs will pop on your screen:

1. About
2. Common
3. **Inputs (explained on the next page)**

Configuration of parameters

If you head to the 'Inputs' tab, you will see all the configurable parameters for each expert advisor

Loaded values are the default ones for the strategy of each EA. You can either use the EA with these parameters, or modify them to best fit your specific needs

You'll find a comprehensive list of each EA parameters and options of use inside the strategy section of each, later in this guide

Automated trading

Whether you decide to go with the preloaded parameters or modify them, you will need to click on the 'OK' button and then everything will be ready for your EA to start trading automatically on your account

As in this example I am using Night Hunter Pro EA, it looks something like this:

To verify that everything is set up correctly, you can check if there is a smiley or a sad face next to the EA name on the top hand-right side of your chart. A smiley face means everything is ok, and a sad face means there is some configuration error

VPS (Virtual Private Server)

A VPS (Virtual Private Server) is a virtual machine sold as a service by an Internet hosting service. I strongly recommend you to install EAs on a VPS to ensure they will be able to run continuously without interruptions, or needing to have your PC switched on all day long

So, which VPS-server should you choose?

Free Windows-VPS from Amazon or Google is suitable only for one terminal on which the signal is copied

Free VPS servers are not suitable for the operation of several terminals or for the full-fledged work of EA, since they are severely limited in computing power and/or the amount of RAM

VPS (Virtual Private Server)

MQL5-VPS has two advantages:

1. Low latency between VPS and trade server
2. You do not need to spend activation to run EA on MQL5-VPS

But MQL5-VPS has significant drawbacks:

1. Very expensive. \$ 15 per month for 1 account, while on one Windows-VPS you can run 10-20 MT4 / MT5 terminals at the same time
2. Inconvenient. You cannot visually observe what is happening in the trading terminal. You can only read the logs. Very often this is not enough to quickly sort out problems that arise

Paid Windows-VPS is the best solution. For 95% of all possible tasks VPS server with 2-4 cores, 4-8 gb RAM and an SSD disk will be enough. On such a VPS, you can easily run 5-10 MT4/MT5 terminals

Avoid hosters that have the word "forex" in their name. For such hosters, Windows-VPS will cost 2-4 times more than the real market price

It is very important that your Windows VPS is close to your broker trading server. This minimizes the delay in trading

VPS (Virtual Private Server)

Here is a list of Windows VPS hosters that I can recommend:

- [Contabo](#)
 - 4 Core
 - 8GB RAM
 - 200GB
 - \$12/month
 - Ger, USA, MO
- [PowerVPS](#)
 - 2 Core
 - 5GB RAM
 - 40GB
 - \$12/month
 - Fra, Ger
- [Hyonix](#)
 - 2 Core
 - 4GB ram
 - 50GB
 - \$12/month
 - UK, USA VA+CA

Staying updated (Telegram channel)

Finally, I can not recommend you enough to follow my [Telegram announcement channel](#)

Why?

You'll find there my constant updates and thoughts of my expert advisors and market behavior as well as algorithmic trading in general

By keeping up to date with the most relevant information, you'll be able to make the best decisions to maximize your profits while keeping your risk controlled

It can make a big difference, trust me

To follow, just click on the link above and become a subscriber

I recommend you activate notifications so you get notified right away when a new post has been made

Free Trials

Free trials

You'll find here 4 of the highest rated Expert Advisors on the MQL market, and you can try any of them, for free. You're invited to see with your own eyes the power of these trading algorithms in action

There is an EA to suit everyone's personality, appetite and risk, so please choose carefully. You're more than welcome to download all of them, and test as intensively as you can, in a **period of 14 days**. You'll be able to test both on demo and real MetaTrader accounts

You should not go further if you landed here looking for a 'holy-grail' trading system to make you rich overnight, which is something that simply does not exist. Please do not waste our time and energy if you're expecting that. Proceed only if you're 100% serious about a strict rule-based approach to trading, allowing you to maximize profits while having risks under control

Thanks for understanding

Trial license activation

Once you download your desired expert advisor, install and set it up on your MetaTrader terminal, you need to make the request for your 14 days license trial.

You will need to fill a simple form on my website with your email address, which expert advisor you want to use the trial with, and your MetaTrader account number (the account with which you will be using the EA).

Once you send the form, please allow me up to 24 business hours to activate the trial on your account

As soon as I activate it, you will receive a confirmation email

You can access the trial activation form by [clicking here](#)

Activate your trial here

In order to activate your trial, please fill the following form and allow me **24 business hours** to complete the process

In case your trial does not get activated within 24 business hours, please contact me at valery@valerytrading.com

NIGHT HUNTER

Expert Advisor Set-up & Strategy Guide

Night Hunter Pro: Description

Night Hunter Pro is an advanced scalping system which utilizes smart entry/exit algorithms with sophisticated filtering methods to identify only the safest entry points during calm periods of the market

NHP is a professional tool developed by me years ago that is constantly updated, incorporating all the latest innovations in the trading area

Nothing fancy here, no testing Holy Grails, no "risk-free martingale", only strict rule-based approach to trading, allowing to maximize return, while having risks under control

- Supported currency pairs: GBPUSD, EURUSD, EURCHF, USDCAD, USDCHF + CHFJPY, AUDCAD, EURCAD, EURAUD, EURGBP, EURJPY, AUDJPY
- Recommended time frame: M5
- Does not use martingale or grid

Night Hunter Pro: Description

- FIFO/FTMO compatible
- Requires good brokerage conditions: low spread and slippage during the rollover time. I advise using a really good ECN broker
- Should run on a VPS continuously
- I recommend disabling trades on weekends while markets are volatile
- Features
 - One Chart Setup: you only need one chart to trade all symbols
 - Solid backtest and live performance
 - Advanced News Filter
 - Stock Market Crash Filter
 - Auto GMT detection
 - Self Diagnostic System
 - Negative Swap Filter

Night Hunter Pro: Set-up video

In case you have not installed the Night Hunter Pro EA in your computer yet, here is a step-to-step video to help you with that

Remember that you can go through each one of the steps on this guide as well, on the general section

Night Hunter Pro: Back-testing video

As you know, past performances is not an indicative of future performances. But in case you're interested, here you have a video showing a live back-test of NHP

In order for the video to not be too long, the selected period is of 2 years

Night Hunter Pro: Inputs

Once you load NHP on your chart, pop-up box will appear showing settings of your EA. Make sure that all the settings and alerts are correct before clicking OK. A full list of settings is located in the next paragraph

If your broker uses a suffix (e.g. EURUSD.a) you should update names in the Symbols separated by comma parameter

Variable	Value
ab -----> MM & Risk settings <-----	Select the risk settings
Check for Instances of the EA	true
Allow Opening a new Trade	true
Lot-sizing Method	Fixed Lots
Fixed Lot	0.01
Dynamic Lot (Balance/Equity based)	10000.0
Max Risk per Trade	5.0
Max Lot per Order	200.0
Max Open Lots	200.0
Use Even LotSize	false
Max Spread for Market Orders, in pips	5.0
Max Spread for Pending Orders [0-disabled]	0.0
Max Slippage for a non-ECN acc, in pips	5.0
Max Symbols at a time	5
Max Net Number of Currencies [0-disabled]	2
Allow to Buy/Sell	Buy and Sell
Minimum Free Margin % [0-disabled]	0.0
Max Floating Drawdown %	100.0

Buttons: Load, Save, OK, Cancel, Reset

Night Hunter Pro: Comprehensive description of parameters

- Allow Opening a new Trade - enable/disable opening of new trades. You can disable it while having opened trades to have the EA close trades that are opened, but stop opening new ones after that
- Lot-sizing Method - select the lot sizing method according to the risk you want to take: Fixed Lots will use fixed lot size from the 'Fixed lot' parameter, Dynamic Lots will use 'Dynamic Lot' parameter, Max Risk per Trade will calculate lots based on % risk per trade, and 3 predefined presets will calculate risk automatically for you. When you choose one method you will only use the parameters that refer to it. For example, if you have chosen Dynamic Lots option you should use the 'Dynamic Lot' parameter below. Changing 'Fixed Lot' and 'Max Risk per Trade' won't matter. Also when you choose one of the predefined risk profiles all the three parameters below won't matter
- Fixed Lot - fixed trading lot. If you want to have all trades the same fixed lot size, select "Fixed Lots" in the 'Lot-sizing Method' and set here the lot size you want
- Dynamic Lot - balance/equity to be used per 0.01 lot. If you want to have for example 0.01 lot size per 100 of your deposit select "Dynamic Lots" in the 'Lot-sizing Method' and set 100 in the 'Dynamic Lot' parameter
- Max Risk per Trade - will calculate the lot size, so that risk per trade stays within specified limit. E.g. setting this parameter to 5 will have all trades lose 5% of the deposit in case of hitting SL

Night Hunter Pro: Comprehensive description of parameters

- Maximum Lot - maximum allowed trading lot. The EA won't open trades higher than this lot
- Maximum Spread, in pips - maximal allowed spread for position closing. Works rarely, as most of the trades are closed using TP
- Maximum Slippage for a non-ECN acc, in pips - max allowed slippage
- Max Spread for Pending Orders - if the current spread exceeds the specified value, the EA will not place new pending orders and will cancel already placed ones. This feature can be used to prevent EA from trading if spreads go through the roof, but based on my results there's little sense in using it for anything else
- Maximum Symbols at a time - max allowed number of symbols that can be opened at the same time
- Allow to Buy/Sell - enable/disable Buy/Sell trades
- Maximum Drawdown Percent - if current floating drawdown exceeds the specified % the EA will close open positions

Night Hunter Pro: Comprehensive description of parameters

- Max Floating Drawdown in Money - if the floating drawdown in money exceeds the specified value, the EA will perform actions specified in the 'Max Drawdown Action' parameter. This option can be used, for example, to prevent losses higher than specified by your prop trading firm
- Max Drawdown Action - allows specifying actions to be taken after the max. drawdown is reached (in money or %):
 - 'Close trades & stop trading for 24h' - the EA will close all open trades and will not open new ones for 24 hours;
 - 'Close trades & stop trading until restart' - the EA will close all open trades and will not open new ones until the EA/MT restarts;
 - 'Prohibit opening new trades' - new trades will be prohibited as long as the floating drawdown is above a specified value;
 - 'Prohibit opening new trades until restart' - new trades will be prohibited until the EA/MT restarts
- Max Drawdown Calculation - allows to specify how the maximum drawdown is calculated:
 - 'The account' - takes into account all positions opened on the account, including trades opened manually or by other EAs;
 - 'This strategy' - takes into account only positions opened by this set file of the EA

Night Hunter Pro: Comprehensive description of parameters

- Maximum Net Number of Currencies - allows to limit the number of open trades with the same currencies (not symbols/currency pairs) in the same direction. The parameter does not lead to performance improvements on tests, still, it limits risks, so it is recommended to be used with a value of 2 when more than 3 pairs are traded at a time. This parameter limits the exposure to risk in a smart way (not just by limiting the number of pairs traded)

For example, we set 'Maximum Net Number of Currencies'=2 and got 3 position open:

- long EURUSD
- long GBPUSD
- short EURCHF
- Net number of open positions with the same currencies:
 - EUR = 0 (long EURUSD + short EURCHF)
 - USD = -2 (long EURUSD + long GBPUSD)
 - GBP = 1 (long GBPUSD)
 - CHF = 1 (short EURCHF)

As you can see, USD has reached the max. limit (-2), so any orders that can lead to a new short USD trade (for example, short USDCHF) will be canceled and prohibited

Night Hunter Pro: Comprehensive description of parameters

- Medium Impact News - enable/disable news events with medium impact (2 stars news)
- Low Impact News - enable/disable news events with low impact (1 star news)
- Speaks - if false, then the EA will not take into account news events marked as Speeches/Speaks
- News List Refresh Rate - news events list update frequency (selection from the drop-down list)
- Symbol Suffix - here you can specify a symbol suffix if your broker uses one
- Placing Orders During Rollover Time - enable/disable placing pending orders during rollover time
- Friday Half Lots - halving trading lots on Friday evening
- Handle Max Drawdown Events on Every Tick - enable/disable drawdown event handling on every tick (instead of once a minute that is used by default, it may consume more CPU resources)
- Max Daily Drawdown Limit % FTMO Rules in Money [0-disabled] - maximum daily drawdown limit in MONEY, calculated according to the FTMO rules. Non-trading operations (like withdrawals) during the day are not taken into account

Night Hunter Pro: Comprehensive description of parameters

- Max Daily Drawdown Reset Hour FTMO Rules (Broker time) - hour to reset the max. drawdown with the prop firm
- Min Profit To Close Trade Before Midnight, in pips [0-disabled] - automatically closes profitable trades before midnight if the specified profit is reached
- Hide TakeProfit - on/off TakeProfit hiding
- Max Open Lots - here you can put a value limiting the total lots that can be opened by the EA on all currency pairs
- Minutes to Stop Trading - minutes to stop trading
- Block Trading for the Entire Day - prohibits opening new trades throughout the day if HV hits the specified level just once at any moment during the day
- Show Stats - show a panel with some statistics

Night Hunter Pro: Strategy

- Symbols separated by comma - list of pairs to trade. Suffix needs to be included if your broker uses one! Supported pairs: GBPUSD, EURUSD, EURCHF, USDCAD, USDCHF + CHFJPY, AUDCAD, EURCAD, EURAUD. First 3 ones are the preferred option (like on Best Pairs and MT 5 Extreme signals)
- Hour to Start/Stop Placing Orders - when to start/stop placing pending orders. Set Smart Time Filter to false if you want to optimize these parameters
- Smart Time Filter - enable/disable smart time filter, it is preferred to enable this parameter, unless using custom set files with optimized timing parameters
- Hour to Stop Trading (on Friday) - hour to stop trading (on Friday). All open positions will be closed at this hour. Set it to 22 if you do not want trades to be held over weekends
- New Year Holiday Filter - enable/disable Christmas/New Year filter. It is recommended to use this filter to prevent low-liquidity market tricks during these holidays
- StopLoss, in pips - stop loss value in standard 4 digit pips. By default are used different optimal SL values for different pairs
- Hide StopLoss - enable/disable SL hiding. You may use this option to hide your real SL from the broker

Night Hunter Pro: Strategy

- Rollover Time Filter - enable/disable the rollover filter
- Swap Filter - cancels trading on Wednesday evening in the direction of the negative swap or cancels trading on every day when swap is exceeded (parameter is adjustable). It is preferred to be used with the default value. Can be disabled on swap-free accounts
- Max Negative Swap, in pips - max negative swap
- News Filter Enabled - enable/disable News Filter (must be allowed access to the URL <http://ec.forexprostools.com> in order to use this filter)
- Wait Minutes Before/After Event - suspend trading before/after the news (default values are preferred)
- Split Orders - embedded feature allowing to split the entry on several slightly different entries. With the default value feature is disabled, 10 is the maximum value (splitting the lot size on 10 different entries)s. Preferred to use with large lot sizes to prevent slippages!
- Adjust Order Price? - if false, the EA will not use the price adjustment for 'Split Orders' parameter and all orders will be placed at the same price

Night Hunter Pro: Strategy

- Minimum Price Range - minimum distance between pending buy and sell orders expressed in %ATR. The option can significantly improve performance (Profit Factor, Expected Payoff), but reduces the number of trades. Recommended value - 0...20. The value of 0 usually shows best results with EURUSD and GBPUSD pairs, while value of 20 is recommended in case of trading other pairs or in case of having bad trading conditions with the broker (higher values make EA less susceptible to bad trading conditions of the broker)
- Randomize Order/TP/SL Levels - if enabled, the EA will randomly slightly change the entry/TP/SL levels. This option allows you to have unique entry/TP/SL values
- Adjust TP Price - allows you to adjust take profit. In case of a positive/negative value, take profit will be increased/decreased by the specified number of pips
- Minimum Free Margin % - if Free Margin% falls below the specified value, the EA will not place new pending orders and will cancel already placed ones
- Trade Comment - comment

Night Hunter Pro: Strategy

- UID (0...9) - unique EA instance number. Usually no need to change it, unless using different set files on the same pair (might be needed for advanced users with their own custom configurations). In this case you need to make sure that every set file uses unique UID number
- ShowPanel - enable/disable Info-panel. It is better to enable the info-panel, as it will show most of what can go wrong there. But it can be disabled to save VPS resources
- GMT/DST Test - GMT offset in winter and DST in Tester. This parameter has no effect on live trading (unless 'Disable Automatic GMT Detection' is set to true)
- Disable Automatic GMT Detection - Set it to 'true' to disable automatic GMT detection. You can use the 'GMT Test/Manual' and 'DST Test/Manual' parameters to manually set the GMT offset in live trading
- News Filter can be used in the Strategy Tester. To apply the option you should download the news events data file '[NewsEvents.txt](#)' and copy it to the common MT4/5 directory - '\\Common\\Files' (File -> Open Data Folder -> Up to 'Terminal' -> Common -> Files). The data file can be found using the link above

Night Hunter Pro: What to do if your results differ from my signals

- Check the set file you use. I recommend trading only the 3 best pairs, it usually gets a bit better overall results. Yes, any particular month can be better with a 9-12 pairs combination, but I'm talking about the overall statistics here. Although trading 5 pairs is also fine
- Check whether your broker is good enough for night scalping at all. Many brokers have huge spreads and commissions + slippages, they will slowly get most of your scalping profits to themselves through bad trading conditions during the night. If you are not sure how to check it, please, write me in private messages or in the EA discussion
- Use rebate service of your liking that will pay you back part of the commission you paid to the broker or a commission discount if that is applicable to your broker. If you need advice, please, write me personally
- With IC Markets the use of AUD-nominated accounts will allow you to reduce the commission you pay to the broker by 20-30%. You will lose a bit during the exchange to/from AUD, so this is a solution for the long term. If you want to know whether this can help you, write me in private messages

Night Hunter Pro: What to do if your results differ from my signals

- You should use the 'Split Orders' parameter in case of significant slippages on entries/exits due to the use of big lot size. This parameter will split big lot sizes on several slightly different entries to prevent slippage from occurring. Slippage dependence on the lot size varies from broker to broker, usually it is much better to keep lot size of a single entry not larger than 0.2-0.5 (2-5 lot size of the overall entry with the 'Split Orders' set to 10). If your order size is larger than 0.8-1 you will experience significant slippage with most brokers. In this case you can lower risks or split the deposit across multiple accounts/brokers
- If you have a significant deposit size, better split it between different brokers, as well as between accounts of the same broker. You will diversify your trading a little bit this way and you will have lower slippages due to smaller lot sizes. You can combine splitting the entry and using several brokers/accounts to improve execution significantly for almost any sensible amount of funds
- If your results are pretty much the same as mine, just wait for at least a month, and if this month turns out to be a bad one - at least a quarter and you will see that the overall profit is close to mine and close to the overall statistics. Please, do not watch it trading day by day if you are not a professional trading with years of experience! The essential feature of the normal human psyche (not a deformed one of a professional trader) is loss aversion. To make it simple: you feel the pain of losing the money twice as much as the joy of receiving it. So if you watch trading day by day it will mess with your head: even if you have the overall profit, you will have a feeling that it all goes to hell

Night Hunter Pro: Tricks & tips you might need

- Using several brokers for diversification will help you to smooth out the overall result. BUT: all these brokers need to have good trading conditions during the night. Write me personally if you need specific advice on that
- Most of the parameters are already close to optimal values. It is preferred to use default values for most parameters (except the 'Symbols separated by comma' and lot-sizing related parameters)
- EURUSD, GBPUSD and EURCHF are the most liquid pairs with the least slippage, night scalping usually works best on these pairs. Additional diversification across multiple pairs might help a bit in case of small lot sizes or might not help you at all (especially with significant lot sizes). Based on the Occam's razor it is better to trade only a few best pairs, not trying to involve additional diversification for little gain
- The VPS choice hardly matters in case of Night Hunter Pro, as it uses pending orders. Pending order is executed on the broker side, so it's essentially like having 0 ms latency all the time, no matter what VPS you use. You might as well have 2000 ms latency with your VPS, it won't matter and execution will always be on the broker side due to the use of pending orders
- If you want to not have trades held over weekends, you need to set 'Hour to Stop Trading (on Friday)' to 22. This way EA won't open new trades at Friday and won't have trades held over weekends

Night Hunter Pro: Tricks & tips you might need

- If you want to use several instances of the EA on one account (for example, to use your own optimised set files with different pairs, timing, SL levels, etc.) you need to have unique UID number for every copy of the EA! Otherwise different instances of the EA will conflict with one another. For example, first set file can have UID = 0, second one a have UID = 1 and so on
- If you get "Failed to get MODE_MARGINREQUIRED" error and it's there multiple times it means one of the following:
 - You either got some of the symbols wrong (e.g. haven't added suffix)
 - Or you haven't shown symbols you would like to trade in the Market Watch
 - Or you listed symbols in the 'Symbols separated by comma' parameter using wrong delimiter (for example, a dot or some other symbol instead of a comma)
- Some brokers might restrict having pending orders too close to the current price, effectively restricting any scalping this way. Most brokers do not use such option, as it is mostly used by small brokers working against its own clients, but you can check if your broker has something like this (picture "Stops_Level" below)

That's it! You'll find in this guide all the information regarding NHP that I could possibly think of, so I think it comes of great help to you while using the EA.

EVENING SCALPER

Expert Advisor Set-up & Strategy Guide

Evening Scalper Pro: Description

Evening Scalper Pro is a state-of-the-art mean-reversion trading system that operates during the American trading session. It's very different from most other scalping systems, since it uses a unique trading logic on cross pairs that have a strong mean-reverting tendency with high profit targets.

ESP enters the market with market orders from 19 to 23h, it does not open trades during rollover (0:00-1:00). In terms of a trade duration it's classical scalping: in and out of the trade within a few hours at the most.

This EA uses a number of advanced techniques to identify the most accurate points of entry and exit, which is why win rate is high.

- Supported currency pairs: EURNZD, EURAUD, AUDNZD, NZDCAD, AUDCAD, EURGBP, GBPAUD, GBPCAD
- Recommended timeframe: M5

Evening Scalper Pro: Description

- Does not use martingale or grid
- FIFO compatible
- Backtests should be done with Tick Data Suite GMT+2 with US DST. This GMT offset is used by most brokers
- Features
 - One Chart Setup: you only need one chart to trade all symbols
 - Multiple currency pairs support
 - Doesn't open trades during periods of low liquidity and bank rollover (0:00-1:00)
 - Market execution
 - Solid backtest and live performance
 - Advanced News Filter
 - Stock Market Crash Filter
 - Auto GMT detection
 - Self Diagnostic System
 - Negative Swap Filter

Evening Scalper Pro: Set-up video

In case you have not installed the Evening Scalper EA in your computer yet, here is a step-to-step video to help you with that

Remember that you can go through each one of the steps on this guide as well, on the general section

Evening Scalper Pro: Back-testing video

As you know, past performances is not an indicative of future performances. But in case you're interested, here you have a video showing a live back-test of ESP

In order for the video to not be too long, the selected period is of 2 years

Evening Scalper Pro: Inputs

Once you load ESP on your chart, pop-up box will appear showing settings of your EA. Make sure that all the settings and alerts are correct before clicking OK. A full list of settings is located in the next paragraph

If your broker uses a suffix (e.g. EURUSD.a) you should update names in the Symbols separated by comma parameter

Expert - EveningScalper

About Common Inputs

Variable	Value
ab -----> MM & Risk settings <-----	Select the risk settings
Check for Instances of the EA	true
Allow Opening a new Trade	true
Lot-sizing Method	Fixed Lots
Fixed Lot	0.01

OK Cancel Reset

Evening Scalper Pro: Description of parameters

- Allow Opening a new Trade - on/off opening new trades
- Lot-sizing Method - select the lot sizing method according to the risk you want to take: Fixed Lots will use fixed lot size from the "Fixed lot" parameter, Dynamic Lots will use Dynamic Lot parameter, Max Risk per Trade will calculate lots based on % risk per trade, 3 predefined presets will calculate risk automatically for you
- Fixed Lot - fixed trading lot
- Dynamic Lot - balance/equity to be used per 0.01 lot
- Maximum Lot - max allowed trading lot
- Maximum Spread, in pips - max allowed spread for position closing
- Maximum Slippage for a non-ECN acc, in pips - max allowed slippage
- Maximum Symbols at a time - max allowed number of symbols that can be opened at the same time
- Allow to Buy/Sell - on/off Buy/Sell trades
- Maximum Drawdown Percent - if current floating drawdown exceeds the specified % the EA will close open positions

Evening Scalper Pro: Description of parameters

- Minimum Price Range, in % ATR [0-disabled] - minimum distance between the upper and lower levels of the price channel, expressed in %ATR
- Medium Impact News - enable/disable news events with medium impact (2 stars news)
- Low Impact News - enable/disable news events with low impact (1 star news)
- Speaks - if false, then the EA will not take into account news events marked as Speeches/Speaks
- News List Refresh Rate - news events list update frequency (selection from the drop-down list)
- Symbol Suffix - here you can specify a symbol suffix if your broker uses one
- Friday Half Lots - halving trading lots on Friday evening
- Handle Max Drawdown Events on Every Tick - enable/disable drawdown event handling on every tick (instead of once a minute that is used by default, it may consume more CPU resources)
- Max Daily Drawdown Limit % FTMO Rules in Money [0-disabled] - maximum daily drawdown limit in MONEY, calculated according to the FTMO rules. Non-trading operations (like withdrawals) during the day are not taken into account

Evening Scalper Pro: Description of parameters

- Max Daily Drawdown Reset Hour FTMO Rules (Broker time) - hour to reset the max drawdown with the prop firm
- Min Profit To Close Trade Before Midnight, in pips [0-disabled] - automatically closes profitable trades before midnight if the specified profit is reached
- Hide TakeProfit - on/off TakeProfit hiding
- Max Open Lots - here you can put a value limiting the total lots that can be opened by the EA on all currency pairs
- Block Trading for the Entire Day - prohibits opening new trades throughout the day if HV hits the specified level just once at any moment during the day
- Show Stats - show a panel with some statistics

Evening Scalper Pro: Strategy

- Symbols separated by comma - list of pairs to trade. Suffix needs to be included if your broker uses one
- Hour to Start/Stop Opening Orders - when the EA can start/stop opening new orders. Set Smart Time Filter to false if you want to optimize these parameters
- Smart Time Filter - on/off smart time filter
- Hour to Stop Trading (on Friday) - hour to stop trading (on Friday). All open positions will be closed at this hour
- New Year Holiday Filter - on/off Christmas/New Year filter
- StopLoss, in pips - stop loss value in standard 4 digit pips
- Hide StopLoss - on/off SL hiding
- Swap Filter - cancels trading on Wednesday evening in the direction of the negative swap
- Max Negative Swap, in pips - max negative swap
- News Filter Enabled - on/off News Filter

NEWS CATCHER

Expert Advisor Set-up & Strategy Guide

News Catcher Pro: Description

News Catcher Pro is a mean-reversion strategy that uses intraday seasonal volatility patterns caused by high-impact news events

It enters the market at a certain time shortly before a high-impact news event occur

NCP does not trade frequently!

- Supported currency pairs: GBPUSD, EURUSD, EURGBP
- Recommended timeframe: M5
- FIFO compatible
- Does not use martingale or grid, each trade protected by a stop loss!
- Should run on a VPS continuously
- Good ECN broker is preferable

News Catcher Pro: Description

- Backtests should be done with Tick Data Suite GMT+2 with US DST. This GMT offset is used by most brokers
- Features
 - One Chart Setup: you only need one chart to trade all symbols
 - Multiple currency pairs support
 - Solid backtest and live performance
 - Advanced News Filter (can be used in Strategy Tester)
 - Auto GMT detection
 - Self Diagnostic System

News Catcher Pro: Set-up video

In case you have not installed the News Catcher Pro EA in your computer yet, here is a step-to-step video to help you with that

Remember that you can go through each one of the steps on this guide as well, on the general section

News Catcher Pro: Back-testing video

As you know, past performances is not an indicative of future performances. But in case you're interested, here you have a video showing a live back-test of NCP

In order for the video to not be too long, the selected period is of 2 years

News Catcher Pro: Inputs

Once you load NCP on your chart, pop-up box will appear showing settings of your EA. Make sure that all the settings and alerts are correct before clicking OK. A full list of settings is located in the next paragraph

If your broker uses a suffix (e.g. EURUSD.a) you should update names in the Symbols separated by comma parameter

News Catcher Pro: Description of parameters

- Allow Opening a new Trade - on/off opening new trades
- Lot-sizing Method - select the lot sizing method according to the risk you want to take: Fixed Lots will use fixed lot size from the "Fixed lot" parameter, Dynamic Lots will use Dynamic Lot parameter, Max Risk per Trade will calculate lots based on % risk per trade, 3 predefined presets will calculate risk automatically for you
- Fixed Lot - fixed trading lot
- Dynamic Lot - balance/equity to be used per 0.01 lot
- Maximum Lot - max allowed trading lot
- Maximum Spread, in pips - max allowed spread for position closing
- Maximum Slippage for a non-ECN acc, in pips - max allowed slippage
- Maximum Symbols at a time - max allowed number of symbols that can be opened at the same time
- Maximum Net Number of Currencies - max allowed number of open trades with the same currencies (not symbols/currency pairs) in the same direction

Evening Scalper Pro: Description of parameters

- Allow to Buy/Sell - on/off Buy/Sell trades
- Allow Hedging - allow opening multi-directional trades on the same symbol
- Minimum Free Margin % - if Free Margin% falls below the specified value, the EA will not place new pending orders and will cancel already placed ones
- Max Floating Drawdown % (in Money) - if current floating drawdown exceeds the specified % (value) the EA will close open positions
- Max Drawdown Action - allows specifying actions to be taken after the max. drawdown is reached (in money or %)
- UID (0..9) - unique EA instance number. Usually no need to change it
- ShowPanel - on/off Info-panel
- Disable Automatic GMT Detection - set it to 'true' to disable automatic GMT detection. You can use the GMT Test/Manual' and 'DST Test/Manual' parameters to manually set the GMT offset in live trading.
- GMT/DST Test/Manual - GMT offset in winter and DST

Evening Scalper Pro: Description of parameters

- 'Speaks' - if false, then the EA will not take into account news events marked as Speeches/Speaks
- 'News List Refresh Rate' - news events list update frequency (selection from the drop-down list)
- 'Allow Additional Trades' - if true, then the EA is allowed to open/keep more than 1 trade simultaneously in the same direction
- 'StopLoss, in pips' - fixed SL in pips
- 'TakeProfit, in pips' - fixed TP in pips. It takes into account commissions and swaps
- 'Close in Profit if Open for X Minutes' - trade will be automatically closed if the floating profit and position holding time exceed the 'Minimum Profit to Close, in pips' and 'Minutes Since Trade Opened' respectively. 'Minimum Profit to Close, in pips' can be negative
- 'Enable TrailStop & BreakEven' - enable/disable trailing stop-loss or breakeven
- 'Trailing StopLoss, in pips' - trailing stop in pips
- 'Trailing StopLoss Start, in pips' - min. floating profit in pips to activate trailing stop-loss
- 'BreakEven, in pips' - min. floating profit in pips to activate breakeven

Evening Scalper Pro: Strategy

- Symbols separated by comma - list of pairs to trade. Suffix needs to be included if your broker uses one!
- PCh Period - period of the price channel (PCh)
- PCh Offset - offset for the PCh levels
- ATR Period - period of the daily ATR indicator
- Position Time Stop - max position holding time, in M5 bars
- Hour to Stop Trading on Friday - hour to stop trading on Friday. All open positions will be closed at this hour
- New Year Holiday Filter - on/off Christmas/New Year filter
- TakeProfit / StopLoss, %ATR - volatility-based take profit / stop loss in %ATR
- Hide StopLoss - on/off SL hiding
- News Filter Enabled - on/off News Filter
- Minutes Before/After Event - allow trading before/after the high-impact event

WAKA WAKA

Expert Advisor Set-up & Strategy Guide

Waka Waka: Description

Waka Waka is an advanced grid system which already has been working on real accounts for years

Instead of fitting the system to reflect historical data (like most people do) it was designed to exploit existing market inefficiencies

Therefore it is not a simple "hit and miss" system which only survives by using grid

Instead it uses real market mechanics to its advantage to make profit

- Supported currency pairs: AUDCAD, AUDNZD, NZDCAD
- Recommended timeframe: M15
- NOT sensitive to spread and slippage
- Should run on a VPS continuously

Waka Waka: Description

- With only 1:30 leverage I advise not to use higher than low risk settings on a less than \$6000 account. With 1:100 leverage it should be fine with up to significant risk setting on a \$1000 account
- Features
 - One Chart Setup: you only need one chart to trade all symbols
 - Multiple currency pairs support
 - Solid backtest and live performance
 - No need to adjust GMT
 - Very easy to use: just read 3 lines of instructions below
 - Much cheaper than available high-quality alternatives

Waka Waka: Set-up video

In case you have not installed the Waka Waka EA in your computer yet, here is a step-to-step video to help you with that

Remember that you can go through each one of the steps on this guide as well, on the general section

Waka Waka: Back-testing video

As you know, past performances is not an indicative of future performances. But in case you're interested, here you have a video showing a live back-test of Waka Waka

In order for the video to not be too long, the selected period is of 2 years

Waka Waka: Inputs

Once you load WW on your chart, pop-up box will appear showing settings of your EA. Make sure that all the settings and alerts are correct before clicking OK. A full list of settings is located in the next paragraph

If your broker uses a suffix (e.g. EURUSD.a) you should update names in the Symbols separated by comma parameter

Variable	Value
ab -----> MM & Risk settings <-----	Select the risk settings
Allow Opening a new Grid?	true
Lot-sizing Method	Low Risk Set 20% annual (0.25% load)
Fixed Lot	0.01
Dynamic Lot (Balance/Equity based)	10000.0
Deposit Load %	0.25
Fixed Initial Deposit? (Tester only)	false
Maximum Lot	100.0
Auto Split?	false
Maximum Spread, in pips	10.0
Maximum Slippage for a non-ECN acc, in pips	10.0
Maximum Symbols at a time	2
Allow Hedging?	true
Allow Trading on Holidays?	false
Allow to Buy/Sell	Buy and Sell
Minimum Free Margin % [0-disabled]	0.0
Max Floating Drawdown %	100.0
Max Floating Drawdown in Money [0-disabled]	0.0

OK Cancel Reset

Waka Waka: Parameters

- TF for OPO method - timeframe for the 'Use OPO method to handle TP' feature: the EA will close trades using open prices only on the TF of your choosing
- 'Break Even after this Level' - break even feature after the specified Grid level is reached
- 'TakeProfit for Grid' - now it allows any value including zero and negative. The weighted TP can be set with a separate 'Weighted TakeProfit' option
- 'Do not adjust TP unless new grid level opened' - if true, the EA will adjust TP of open positions only when a new grid level is opened. The user can manually set their own TP, which will stay current until the EA opens a new grid level
- 'Fixed Initial Deposit (Tester only)' - lot size will be calculated based on the initial deposit, new profits will not be taken into account
- 'HourToStartTrading' - hour to start trading
- 'HourToStopTrading' - hour to stop trading
- 'Keep Original Profit Level & Lot Size' - When skipping grid level, the EA will keep profit target from the original (standard) strategy. It helps boost performance. The EA still needs 'marker orders'

Waka Waka: MM & Risk Settings

- Allow Opening a new Grid - on/off opening of new grids. It does not affect the already open grids
- Lot-sizing Method - select the lot sizing method according to the risk you want to take: Fixed Lots will use fixed lot size from the "Fixed lot" parameter, Dynamic Lots will use 'Dynamic Lot' parameter, Deposit load will calculate lots based on deposit load%, and 4 predefined presets will calculate risk automatically for you
- Fixed Lot - fixed trading lot for the initial trade.
- Dynamic Lot (Balance/Equity based) - balance/equity to be used per 0.01 lot
- Deposit Load % - % of the deposit that will be totally used to open the initial trade
- Maximum Lot - max allowed trading lot
- Maximum Spread, in pips - maximal allowed spread
- Maximum Slippage for a non -ECN acc, in pips - max allowed slippage
- Maximum Symbols at a time - max allowed number of symbols that can be opened at the same time

Waka Waka: Strategy

- Symbols - symbols separated by comma (custom if empty)
- Bollinger Bands Period - period of BB used to calculate the upper/lower levels
- RSI Period - period of RSI used to filtering out trades with small potential
- Maximum RSI Value - value for the RSI filter
- TakeProfit for Initial Trade, in pips - take profit for the initial trade (if no grid trades opened)
- TakeProfit for Grid, in pips (weighted if zero) - take-profit for the grid. If zero, then TP is weighted, i.e. it is equal to TP of the initial order in money (not in pips!)
- StopLoss for Grid, in pips (1000 pips if zero) - stop-loss for the initial/grid trades
- Hide StopLoss - on/off stop-loss hiding

Waka Waka: Grid settings

- Trade Distance - min. step in pips between grid(averaging) trades
- Smart Distance - auto- adjusts the trade distance depending on market volatility
- 2nd Trade Multiplier - multiplier for the 2nd trade
- 3rd-5th Trade Multiplier - multiplier for the 3rd-5th trades
- 6th- Trade Multiplier - multiplier for the 6th-.... trades
- Maximum Trades - max number of grid(averaging) trades

Buying licenses

Buying licenses

Hopefully you will have amazing trials with these expert advisors and are ready to take the next step to becoming a better trader

By acquiring a license, you'll be able to:

- ★ **Dominate** EA's trading as the most successful algo-traders in the world
- ★ Receive personal **premium support** from me with anything you might need (AnyDesk configuration available)
- ★ Become part of the most exclusive **Telegram group** filled with hundreds of master traders
- ★ Access to **exclusive** promotions, discounts and whitelists for upcoming EAs or signal services

As you will see on the website, the prices are incremental and slots limited. This is because we want to keep the amount of users low, as well as the supports request manageable

Thanks for understanding

100% no-risk, 30 days money back guarantee

If you don't love my EA's, I'll refund you every cent immediately, no questions asked

My #1 priority is your full satisfaction

I care for the results each one of my clients get to the point where I'm called 'obsessive' from time to time

Having worked so hard for so long on perfecting my expert advisors, I am 100% confident that they can help any trader achieve their goals and (hopefully) some of their dreams. The proof is in the results

I'm so certain about this, that in the extremely unlikely case that you do not LOVE my expert advisors, I am willing to return every cent you paid to me, immediately, and with no questions asked

Not only that, but I am willing to offer you this incredible guarantee for a long period of 30 days (while MQL market only does it for 7 days, and most EA selling sites do not offer it at all)

Best wishes,

Valeriia Mischenko

Top-rated MQL Developer

Real license activation

Once you have purchased your desired expert advisor, install and set it up on your MetaTrader terminal, you need to make the request for real money license to be activated

You will need to fill a simple form on my website with your email address, which expert advisor you bought, your order number (find it on the order confirmation email), your MetaTrader account number (the account with which you will be using the EA) and your Telegram username/link in case you want to be added to the group

Once you send the form, please allow me up to 24 business hours to activate your license. As soon as I activate it, you will receive a confirmation email

To access the license activation form, [click here](#)

The screenshot shows a web form titled "Activate your license here" on a dark background. The form is white and contains the following text and fields:

- Header: VALERY TRADING
- Title: **Activate your license here**
- Text: In order to activate your license, please fill the following form and allow me **24 business hours** to complete the process
- Text: In case your license does not get activated within 24 business hours, please contact me at **valery@valerytrading.com**
- Form fields:
 - Email*
 - Expert Advisor* (dropdown menu)
 - Order Number*
 - Metatrader Account Number*

Access to exclusive Telegram groups for buyers

Once you make a purchase of any of the EA's licenses, you will receive an invite to join our exclusive Telegram groups

Inside each group you will find hundreds of the EA's users, who have been trading with them for a long time

Additionally, I am active on the groups, making my best to help everyone with any request they might have, as well as posting the most relevant updates and news

In case the invite does not reach you, or you miss it, just send me an email to valery@valerytrading.com

See you in there!
