The official support - https://t.me/ea_quantum_lab_Support (+375333784638)

The important information for all users of expert advisors!!!

All settings for each advisor are absolutely FREE !!!

The support will NEVER write first !!!

Development of software for the financial market

EA Damn Genius

It is a multi-currency scalping trading advisor based on a neural network with the ability to learn from history data. The purpose of the EA is to help traders better understand the scalper trades generated by the system. The EA is equipped with state-of-the-art machine learning algorithms and neural networks that allow us to analyze and interpret huge amounts of data related to financial markets. With these methods, we can identify trends, patterns, and signals that help us make informed trading decisions. The DG Expert Advisor uses a set of mathematical formulas and strategies to make trading decisions. These formulas may include calculations of market volatility, trend strength and probability of successful trades. We use historical market data to train and evaluate the performance of the Expert Advisor. The expert uses data preprocessing methods.

The main parameters of the advisor and the way of its using.

Use the recommended broker [link](#). Choose the type of account ECN, using partner code – **xtsk**

The account which would be opened with a partner code — **xtsk** will get the next advantages:

-**Spread from zero even on the gold.**

-**No slippage.**

-**No requotes.**

Leverage

If you register a trading account for the first time, we recommend you to choose 1:500 leverage. If you choose 1:500 leverage and have 100 USD on your account, your trade value is 50,000 USD.

Attention: you should count the trading risk of starting lot for your own depending on your deposit.

0.01 lot for every 250\$ (Aggressive)

0.01 lot for every 500\$ (Moderate)

0.01 lot for every 1000\$ (Conservative)

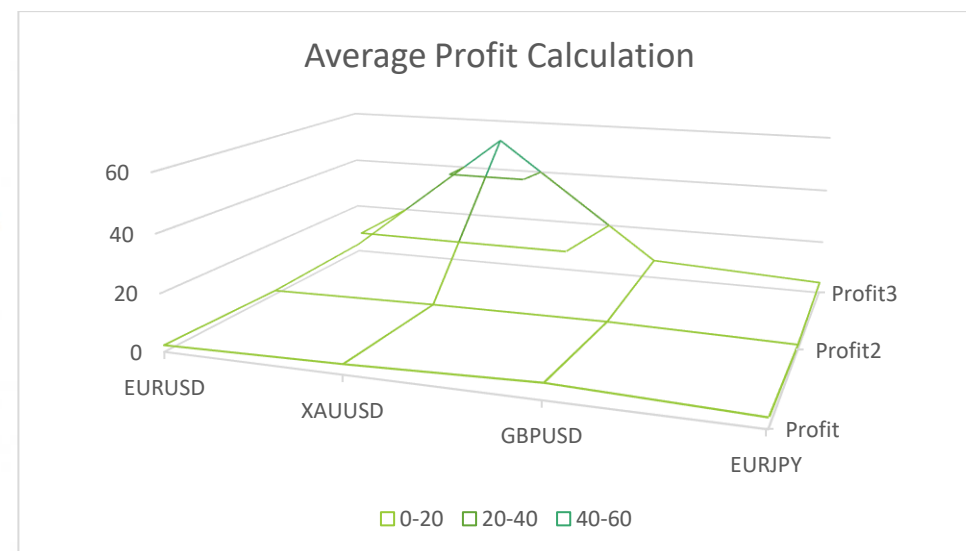

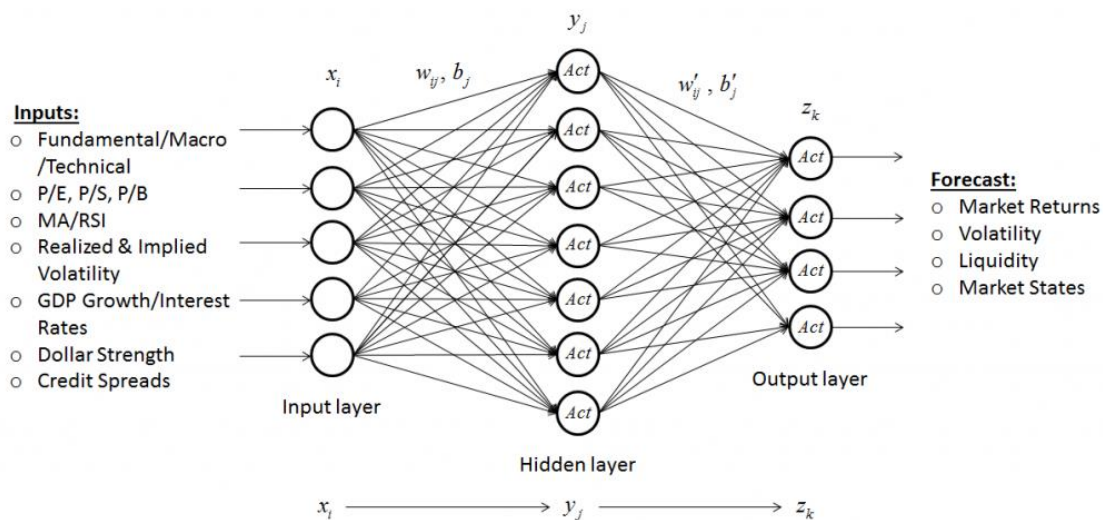

The minimum amount for the trading is 1000\$ for one trading instrument.

The recommended timeframe is M1 (the timeframe can change depending on the settings).

The setting file has the exact timeframe and trading instrument for using in its title.

The trading instruments: EURUSD, GBPUSD, XAUUSD, USDCAD, AUDUSD, EURJPY, EURAUD, DE40.

You also need a VPS-server for trouble-free operation of your advisor.

- Connection to the system «<https://lobytrade.com>» - remote control advisor (without VPS-server).
The system lobytrade allows getting full control over trading activity of advisor without access to VPS-server.
- Automatic calculation of positions for trading «balance limit» with function «lot size units» where you can set the lot calculation for yourself: 0.01 lot for a certain amount of the deposit «balance limit».
- The martingale system helps to improve trading activity. This function is very flexible in settings which allow you to choose the most optimal settings for certain time intervals and trading instruments.

The system has:

Lot Multiplier – this function specifies the sequential order multiplier in the order grid.

Step – function of the order grid step (sets the minimum allowable value for opening a subsequent order).

Max Orders - a function of the total number of orders in one series.

Take Profit from martingale – the total level of closing the entire grid of orders in profit by the total number of orders.

Stop Loss from martingale – the total level of closing the entire grid of orders at a loss by the total number of orders.

Take Profit Virtual orders – take profit of the virtual order system that allows you to improve the trading system.

Step Virtual orders – a step in the network of the virtual order system that allows you to improve the trading system.

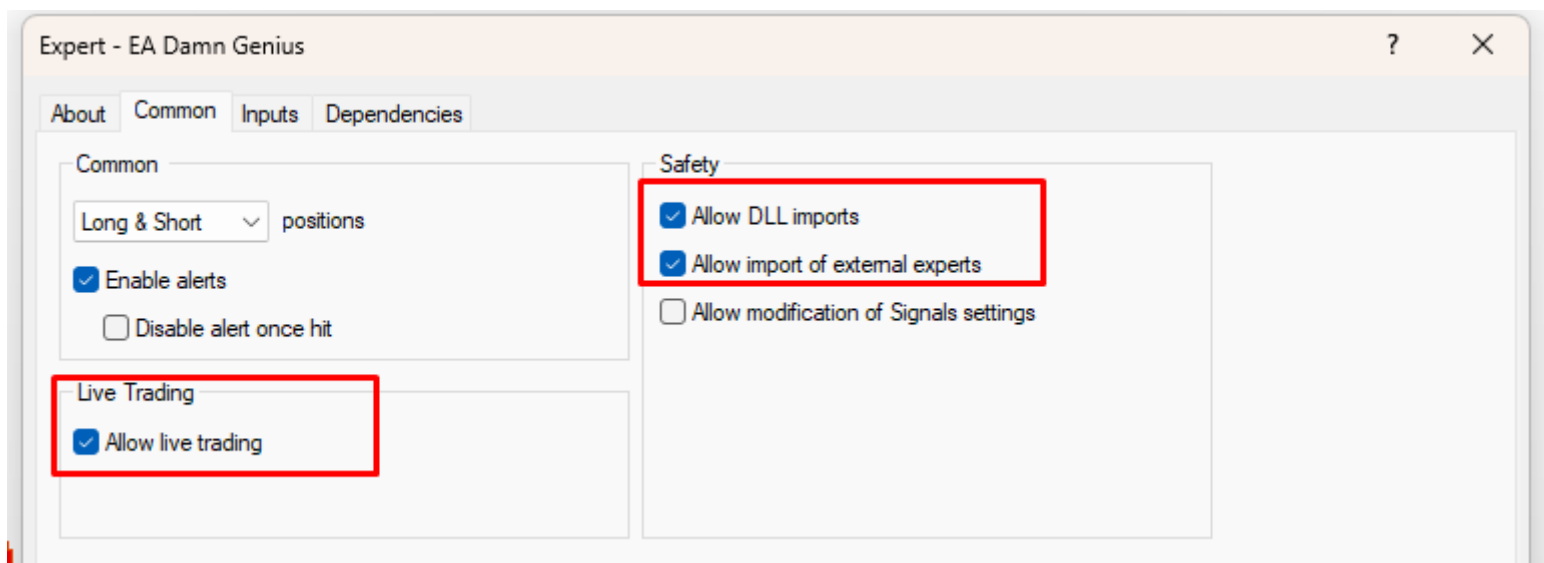

Count Virtual orders – the number of virtual orders in the trading system.

- Trailing System – a system for tracking open orders as a single order and the entire grid of orders.

TrallPips – grid step at which the function is triggered without loss.

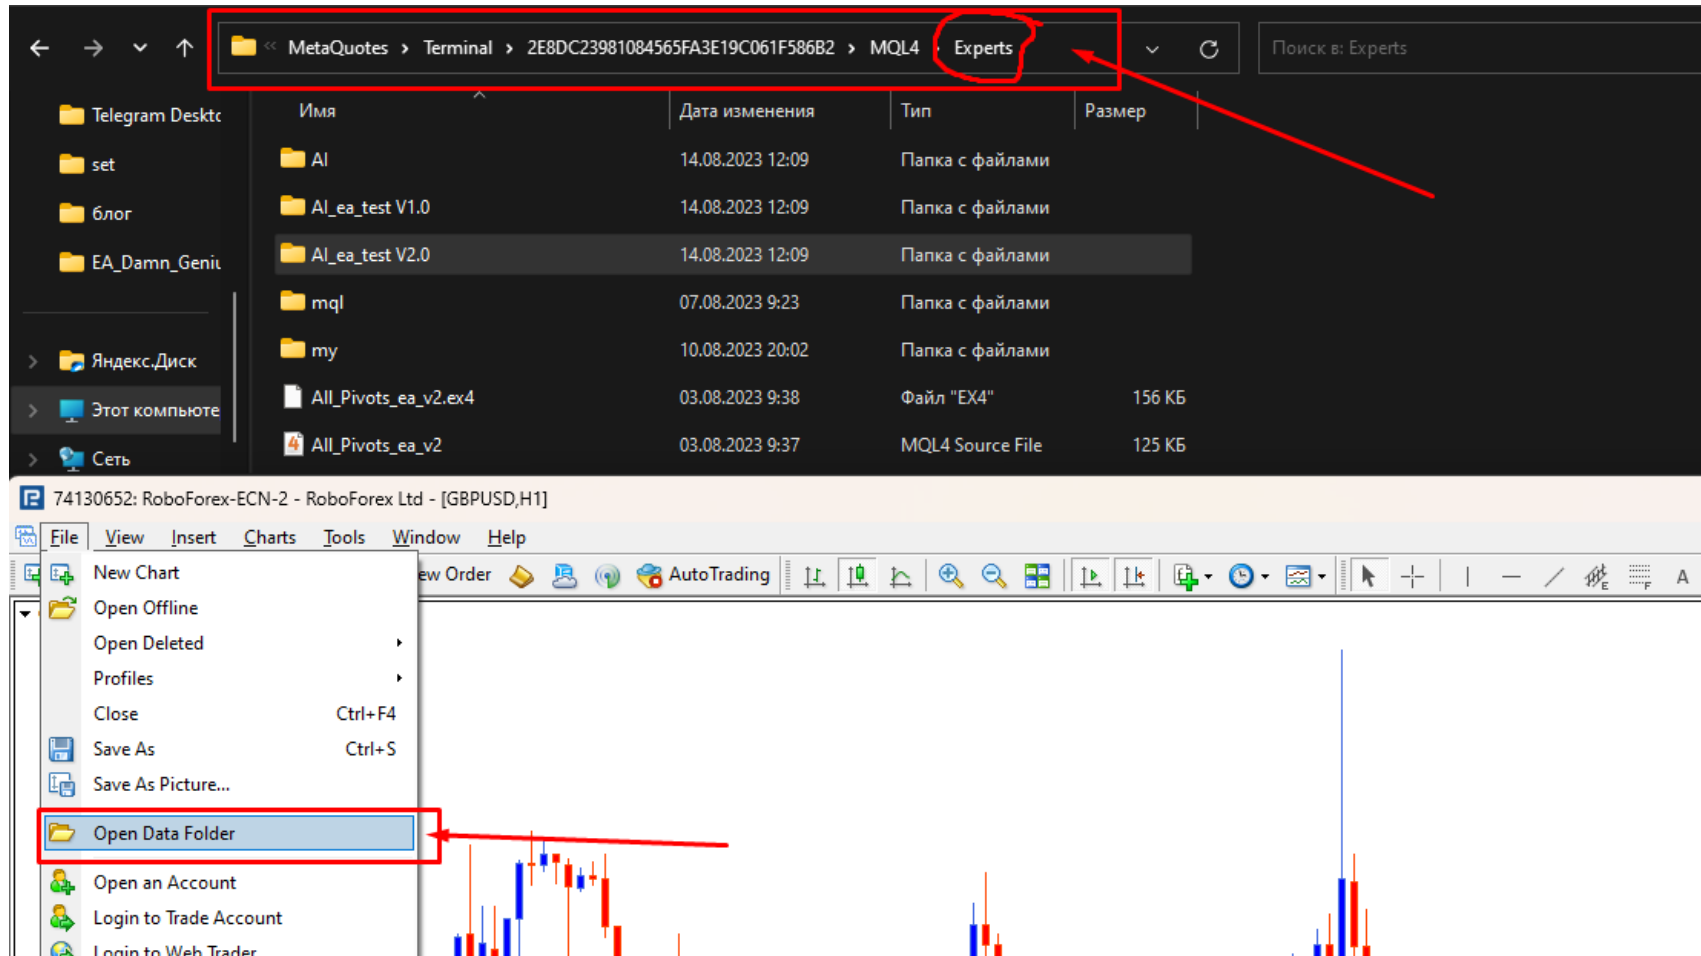

TrallStep – level distance without loss from the current price.

- Filter Time - the filter of the adviser's work (the beginning and the end of the trading activity of the advisor is set) during the specified period the advisor makes transactions.

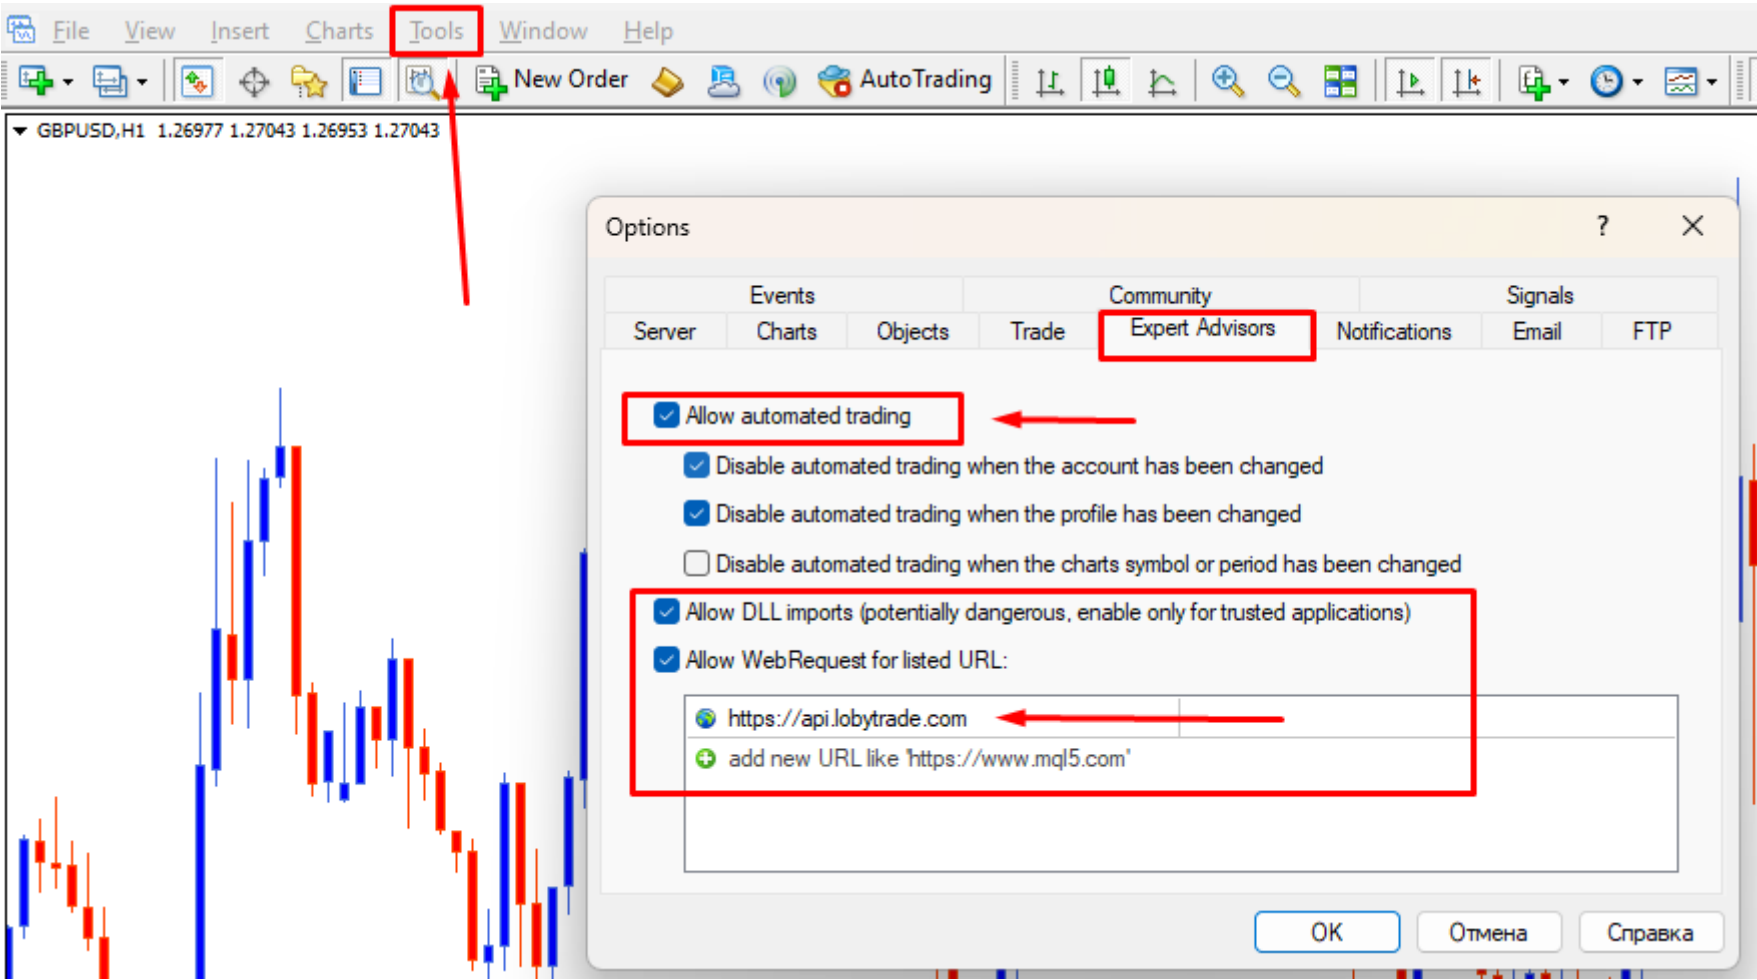

The instruction of the installin the advisor on the terminal MT4

Copy the file of the advisor to the section ***Terminal\2E8DC23981084565FA3E19C061F586B2\MQL4\Experts***

Add a contact site to the extension lobytrade.com

Add extension <https://api.lobytrade.com>

The instruction for testing advisors on MT4 terminal on a real tick data

Before deciding to trade with an expert advisor, it is recommended to test it on a historical data. To get the exact method of testing on the MT4 terminal use an additional software application <https://eareview.net>.

Download free tick data

Acquire free historical tick data for Forex and CFD symbols from multiple quality sources.

Centralized storage

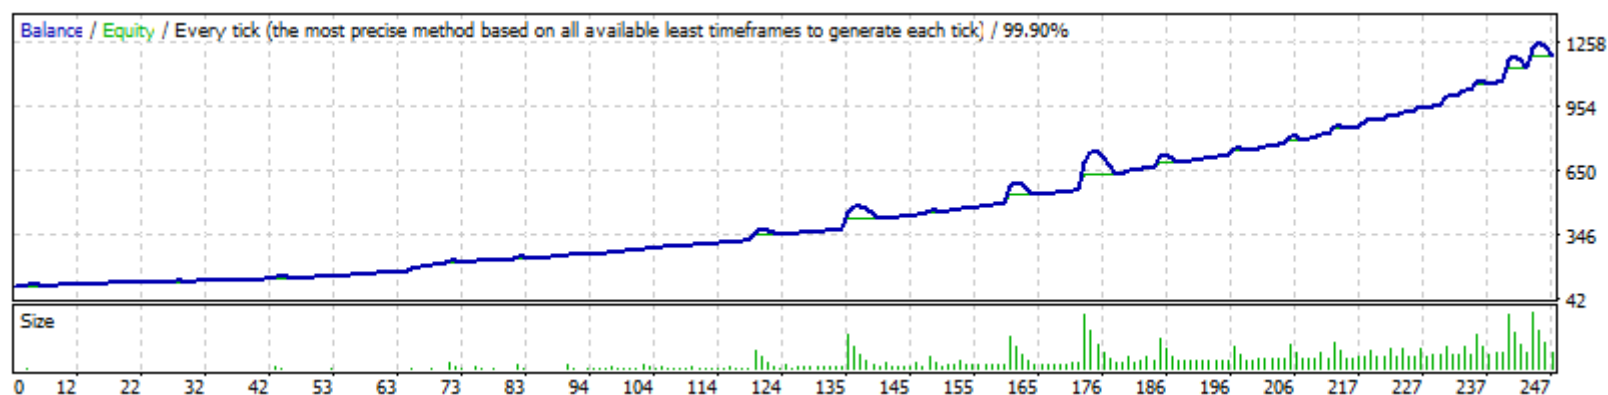

Store all your tick data in a single location, manage it in one place yet have it ready to use across all your terminals.

Backtest & export

Run accurate backtests directly without manually handling files. Access all advanced settings easily. Export the data to any trading platform.

Backtesting is a method of analyzing how well a trading strategy can perform by applying it to historical data. This will help you to compare different strategies and choose the one that gives you the best results. The idea behind backtesting is that strategies that worked well in the past are more likely to work well in the similar situation. By testing trading plans on previous datasets that exactly current market conditions, you can see how they will perform before making any trades. However, it is important to remember that backtesting does not guarantee success in the current market. Past results are not the reliable indicator of future results. Backtesting is just part of your research before entering a trade. This will help you to understand the potential volatility of the asset and take steps to manage risk accordingly.

Using remote control of the advisor “LobyTrade”

The adviser has a built-in authoring system from **EA Quantum Lab** for managing an adviser through the website or mobile application. This application allows you to directly connect a trading advisor with a mobile application for managing trading advisors.

Application features:

- *Close all trades*
- *Close only sell trades*
- *Close only buy trades*
- *Disable advisor*
- *Pause advisor*
- *Enable advisor*
- *Total score statistics*

The additional functional of the service:

Monitoring of trading accounts- allows to get the exact information about trading on accounts. The main indicators of monitoring:

Account growth chart (visual diagram of account balance change taking into account profit and drawdown, both fixed and floating)

Exact trading account indicators:

Total traders:

Profitable trades:

Losing trades:
