

MAIN

"when the market is stormy, do anything other than trading"

Optimal settings for the risk-to-reward ratio. These settings, if properly managed and followed all the rules, can provide you with a 92%+ days win rate

First, let's take a look at the settings

Variable	Value
☐ Lot	0.1
☐ MaxLot	5.0
☐ BE LEVEL (dd in money)	-3600.0
☐ Slippage	5
☐ Magic	29193
☒ COM	BLACKBIRD 1.20
☐ USE2SideOrders	false
☐ WorkMode	WORK ON TREND
☒ AL	---- MODE ----
☐ Mode	false
☐ EasyLow	false
☐ Low	false
☐ Middle	false
☐ High	false
☐ UltraHigh	false
☒ TIMES	---- Time and Gap ----
☐ UseTimer	false
☐ TimeHStart	0
☐ TimeMStart	0
☐ TimeHEnd	0
☐ TimeMEnd	0
☐ GAP	25.0
☒ MM	---- Money Manageme
☐ ProfitInPersent	0.0
☐ StopLoss (in money)	0.0

This setting will work if all modes are turned off. Specifies any lot for trading that you want

The maximum lot that will be taken by one transaction. Need to be configured according to the table

If the robot reaches the drawdown indicated in this column, it will try to close the day at breakeven

Do not touch

The system number by which the robot understands where its positions are and where they are not.

Enter a random value of 5 numbers

We recommend always setting it to "true"

It will be more effective if the robot takes positions VS trend. Use only counter-trend mode

Includes modes

Includes timer

Do not touch

Enter your profit in accordance with the table. The higher the profit, the less chance of closing it

Maximum drawdown. The robot will close all positions and turn off when this drawdown is reached.

Attention! Take into account the slippage of your broker, in the news the spread can be 20-30 points!!

Optimal setup using the example of an account of \$100,000

MaxLot_____5
BE LEVEL _____3600
USE2SideOrders_____TRUE
WorkMode_____VS TREND
MODE_____TRUE
MIDDLE_____TRUE
TimeHstart_____3 (UTC+3)
TimeHEnd_____18 (UTC +3)
PROFIT_____0.5
STOPLOSS_____4500

It was this setting that showed a 100% win rate in September

Test the robot on a demo account before using it on a real account! It is important! You must understand how to manage him, how he gains positions and how he closes them.

MAIN

"when the market is stormy, do anything other than trading"

MAXLOT

Setting the maximum lot in relation to your deposit

200 000\$ = 10 MAXLOT

100 000\$ = 5 MAXLOT

50 000\$ = 2.5 MAXLOT

25 000\$ = 1.25 MAXLOT

10 000\$ = 0.5 MAXLOT

The ratio is clear, if your account is any other, for example \$14,000, calculate the maximum lot yourself.

1. 14,000 is 86% less than 100,000

2. We subtract 86% from the 5 lots required for 100,000

Maximum lot = 0.7

If your account is less than 10,000

If your account is less than \$10,000, you need to open a cent account at your broker. Due to some metatrader limitations, the robot cannot work on regular accounts with a balance of less than 10,000. Opening a cent account is very simple, this is a common practice for robot trading.

Demo tests

To backtest effectively, you must test every single day, since the robot does not have news filters and, for example, an annual backtest will show an unrealistic result.

Thank you for carefully studying the instructions. Best wishes.

Test the robot on a demo account before using it on a real account! It is important! You must understand how to manage him, how he gains positions and how he closes them.
