Introduction to Forex TetraBot

Forex TetraBot is the first Forex product that allows you to earn four times more money by using the same deposit. It is a very tempting product - my friends who also close to Forex niche cannot stop asking me to try it. Time has come! This product was designed with professional team of Forex traders but can be used by complete novices as well as by professional traders.

Also, if it is made in Switzerland, there is no doubt it is of high quality. I am happy to announce that finally I am ready to share my new Forex TetraBot for auto-trading.

So, welcome to try the functionality and algorithm of our new software!

Best regards, Anna "Forex" Monti

Forex TetraBot Installation

Broker and MetaTrader4

To trade with **Forex TetraBot** you need MetaTrader4 trading terminal, internet connection and ability to leave your computer working non-stop along with MT4.

I strongly recommend starting with a free demo account with any broker you like. Though, I may recommend MIG Trading broker, FXDD and other reputable companies. The final choice of a broker must be yours.

At their website (of any broker) you will find a FREE download of desktop MetaTrader4 platform (mobile and other versions are not compatible with TetraBot). Download it and launch the application. It will be installed in just few minutes. When you start MT4 for the first time it will offer you create a demo account. Enter your details and an account will be registered. Now you may install **Forex TetraBot**.

Installation of ex.4 files for all builds above 600

Before installation check your MetaTrader4 options. Check if **Live Trading** is enabled. NO EA WILL TRADE IF it is deactivated.

You need to go to **Tools/Options/Expert Advisors tab**

and check if you have the same boxes checked:

Now, let's drag and drop!

1. Start **MetaTrader4** of your broker. Select **File, Open Data Folder**.

2. Open **MQL4** folder. Now copy

FOREX_TETRA_ROBOT_H4_AUDUSD.ex4,
FOREX_TETRA_ROBOT_H4_NZDUSD.ex4,
FOREX_TETRA_ROBOT_H4_USDCAD.ex4 and
FOREX_TETRA_ROBOT_H4_USDCHF.ex4

into **Experts** folder.

3. Close **MetaTrader4** terminal and start it again. Now the new pasted files will appear in Navigator list. Please click “+” sign next to “Expert Advisors” section.

If you don't see the product's files in "**Expert Advisors**" section, then please re-trace all your steps to make sure you did everything correctly.

Tuning your Forex TetraBot

Select a pair (or several pairs) you would like to trade with. You may trade with **AUDUSD**, **NZDUSD**, **USDCAD** and **USDCHF**, **H4** timeframe.

- Then drag **files** from Navigator panel straight into the new chart. You will see:

- You should see a customization table with tabs: Click "**Common**" and check all of the items like shown on the picture below:

- Now switch over to the "**Inputs**" tab. Here you can fine-tune the values:

Expert - FOREX_TETRA_ROBOT_H4_AUDUSD

About Common **Inputs** Dependencies

Variable	Value
 PinCode	0
 MagicID	5344524
 TimeToStart	0
 TimeToEnd	23
 SendEmailToMe	false
 PushNot	false
 Lot	0.1
 TakeProfit	40
 StopLoss	60
 Hedging	true
 SafeStyle	false

PinCode is needed to activate your copy. Read further about it.

Magic ID is the identifying code of any robot. It should be unique. It is also shown in Comments tab when orders are set.

Time to start and Time to end

Use it if you need to select special trading hours. Rest of the time robot will be not active. Best if you leave default settings.

SendEmailToMe

If you worked with email notifications before, you may setup this feature. MT4 would send emails then, but you would need to set this option in MT4 itself that may require some extra knowledge. Most of free email providers will be not supported.

PushNot – telephone notifications.

Lot is the Lot Size of your trades. Please start with the smallest. For instance, set 0.1 for each \$1000 of deposit. It is the best recommended level.

Take Profit and **Stop Loss** are fixed initial values that are set along with pending limit orders. These default values are different for eurUSD and eurGBP. Please leave default or change them if you know exactly how it will help you.

Hedging* is opening a buy and sell position at the same time with the same lot volume. It is a way to reduce the amount of loss you would incur if something unexpected happened.

SafeStyle protects you from unsafe trading (especially on Fridays). You can enable or disable it due to your preferences.

*The main reason that you want to use hedging on your trades is to limit risks. Hedging can be a useful part of your trading plan if done carefully. It should only be used by experienced traders that understand market swings and timing. Dealing with hedging without adequate trading experience could be a disaster for your account. So, using hedging can be tricky sometimes, that's why we added **an optional hedging feature to Forex MegaLiner Robot** - you can either use it or not regarding to your preferences

After you check the settings PRESS OK button.

Indicator's Activation

It is allowed to use one copy of the product on 1 personal PC (1 live account and unlimited demo accounts). To protect you from using illegal copies we have integrated a **new protection system**.

After the installation steps you will see the red message which means that you need to activate your product.

Follow the steps:

1. Copy the numbers and send them to us anna@annaforex.com
2. We will generate an activation key and send it back to you.
3. Insert the received activation key into **Inputs – PinCode**.
Your personal activation key for each pair will be the same.

The message **Index Software** will become **blue**.
Congratulations! You are ready to trade!

All of the results will be visible in the column "Terminal" under the "Account History" tab.

Should you have any questions or you need any help, please feel free to contact me at anna@annaforex.com

As always, I'll do my best to help you. Wishing you stable profits!

Best regards, Anna "Forex" Monti
