

FXBRINGER

How to correctly install and configure FxBringer:

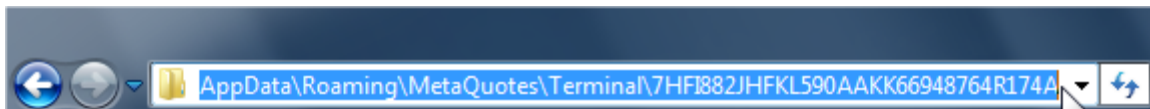

1. Run your terminal MetaTrader 4.
2. Open MT4 data folder, like on the screenshot:

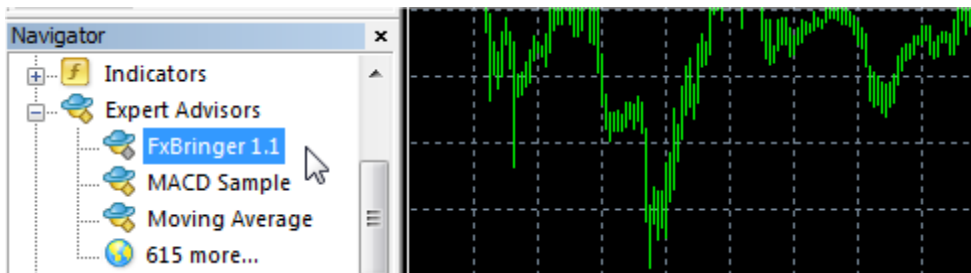

3. Copy its location from an address bar:
It may look like this...

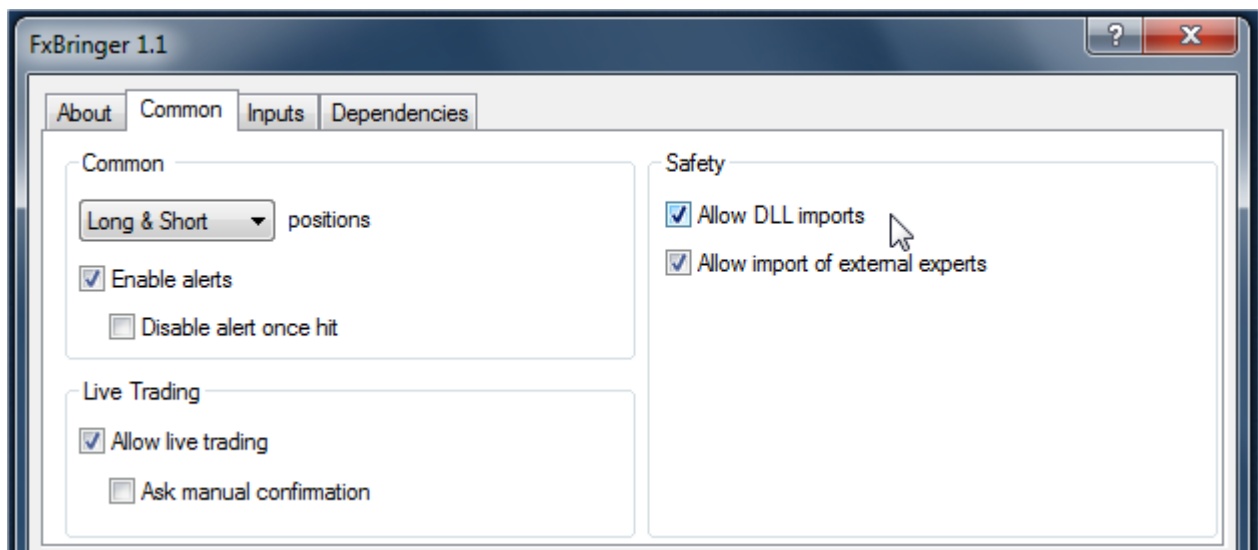

...or this.

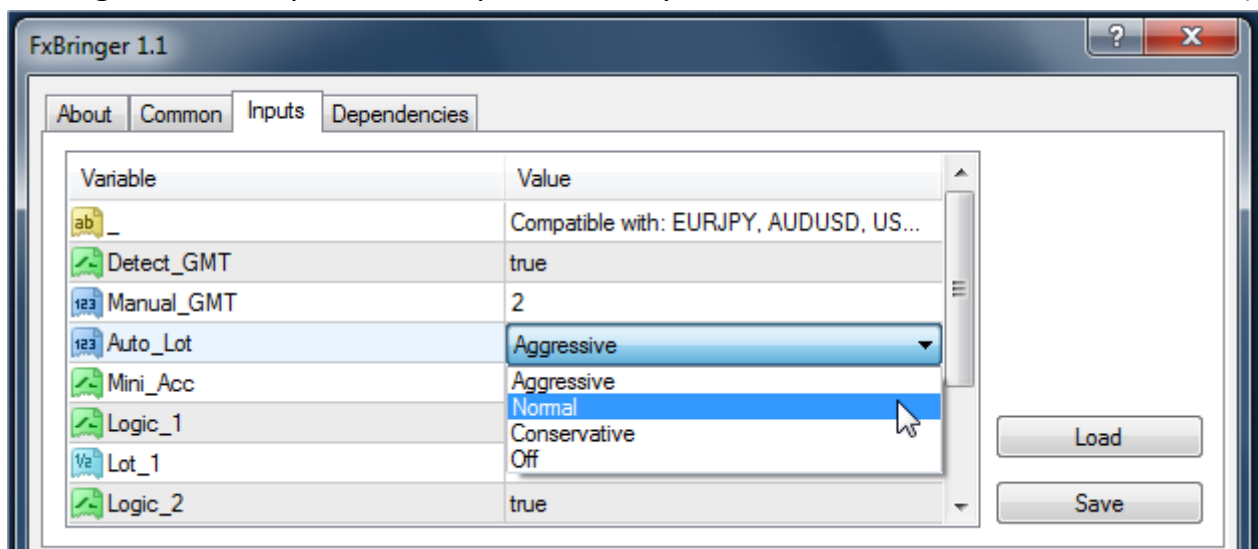

4. Run the main file of FxBringer from the zip archive you got, and paste the copied location during the installation.
5. Finish the installation and reboot your terminal MT4.
6. Open a chart with a desired currency pair, which your version of FxBringer supports (EURJPY, AUDUSD or USDCHF) and set a recommended TimeFrame – M30.
7. Find the EA in a Navigator panel and double click on it:

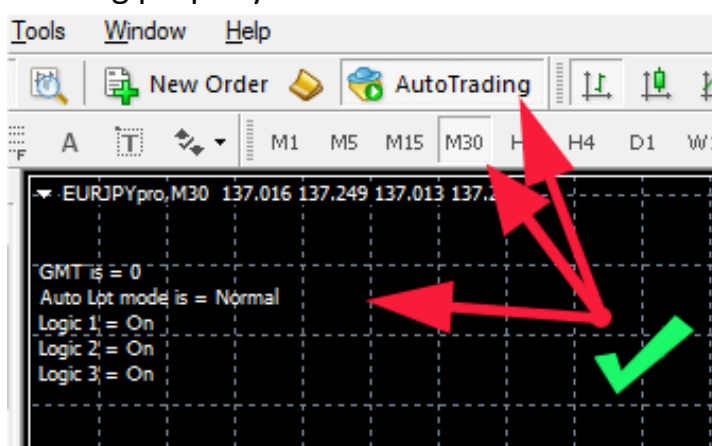

8. On an appeared dialogue box ensure that the "Common" tab options are selected correctly as it is shown on the screenshot:

9. On the “Inputs” tab of this dialogue box set your desired parameters (recommended settings and descriptions of all parameters you can find further down this Manual):

10. The installation and configure of FxBringer is completed! Ensure that the EA is working properly:

Requirements and recommended settings of FxBringer:

FxBringer works only with EURJPY, AUDUSD and USDCHF currency pairs. A regular version has the first two pairs and USDCHF is in a special bonus version.

Minimal recommended deposits for 0.01 Lot:

	Aggressive	Normal	Conservative
EURJPY	\$150	\$365	\$850
AUDUSD	\$100	\$250	\$570
USDCHF	\$130	\$320	\$750

Recommended leverage is from 1.200 for “Aggressive” Auto Lot mode, from 1.100 for “Normal” and from 1.25 for “Conservative” mode. We recommend to use “Normal” or “Conservative” Auto Lot mode.

Recommended TimeFrame is M30.

It is necessary for the EA to trade 24/5.

Parameters and their descriptions:

Detect_GMT - enable\disable auto GMT.

Manual_GMT - enter the settings of GMT manually.

Auto_Lot - auto calculation of a Lot size. It has 4 modes: “Aggressive”, a Lot is calculated for each of the three Logics in such a way so that 85% of the deposit was used; “Normal”, the same principle as in “Aggressive”, but with 35% of the deposit; “Conservative”, the same principle as in “Aggressive”, but with 15% of the deposit. The fourth mode is “Off” - auto Lot is turned Off, the EA uses specified Lots for each logic separately.

Mini_Acc - mini accounts, where 0.1 lot actually means 0.01.

Logic_1 - enable or disable a logic (session).

Lot_1 - enter a Lot size for the first logic. It only works if the Auto Lot is turned Off.

Logic_2 - enable or disable a logic (session).

Lot_2 - enter a Lot size for the second logic. It only works if the Auto Lot is turned Off.

Logic_3 - enable or disable a logic (session).

Lot_3 - specify enter a Lot size for the third logic. It only works if the Auto Lot is turned Off.

Slippage - control the difference between the price specified in a trade and the actual transaction price.
