Introduction

Thank you for your purchase of "Buy/Sell Arrow Scalper"!

Buy/Sell Arrow Scalper software package includes:

- Step-by-step users guide
- Indicator's secret trading algorithm explained in detail
- Buy/Sell Arrow Scalper indicator software itself
- Live Actions Screenshots
- Sample Trades examples
- Personal "I will help you" promise from the developer

Buy/Sell Arrow Scalper is a brand new trading software with absolutely unique signals generation technology. The code behind this indicator is performing all the complex calculations to generate highly accurate buy/sell scalping arrows right on your chart. It was extremely difficult to put the most profitable and reliable scalping algorithms into a single mega indicator, but we did and we think you will enjoy trading with Buy/Sell Arrow Scalper! Good luck!

It's extremely important for you to fully understand how Buy/Sell Arrow Scalper works. Read this guide carefully, it has a lot of important information that could greatly improve your trading experience.

Please try using the indicator on a demo account first. Only move to trading with it on a live account, once you are completely familiar with Buy/Sell Arrow Scalper and fully understand all the simple rules on how to use it correctly.

Do not hesitate to contact us if you have any questions!

We wish you a great trading success!

Karl Dittmann's

Installing the Indicator

IMPORTANT: Make sure to **update your MT4** to the latest build. Buy/Sell Arrow Scalper is designed to give you best results and to work properly only with the latest version of MT4 platform.

If you don't have MetaTrader 4 ® installed, please download it from this link:

<http://alpari.co.nz/downloads/alparinz4setup.exe>

Follow the instructions and open a demo or real account. We recommend trading on a demo account before proceeding to real live accounts.

Unzip the zip file that you have downloaded:

- 1) The indicator file is [BuySellArrowScalper_V2.0.ex4](#)**
- 2) The library file is [BuySellArrowScalper_Library_File_V2.0.dll](#)**

MT4 installation instructions:

Step 1:

- 1) Open your MT4 platform
- 2) Click File — Open Data Folder. Here you will find a folder called MQL4.
- 3) Open folder MQL4. Here you will find Indicators folder. Copy your Indicator (ex4) file into MQL4/Indicators folder. Do this by right clicking on the file and clicking “copy” and then “paste”.
- 4) Open folder MQL4 again. Here you will find Libraries folder. Copy your library (dll) file into MQL4/Libraries folder. Do this by right clicking on the file and clicking “copy” and then “paste”.

5) Restart your MT4.

If you have any difficulties, please contact our technical support and we will help you as soon as possible.

Our support email is: karl@karldittmann.com

Step 2: Open the MetaTrader® platform, and click on View -> Navigator.

You can also press CTRL+N.

Click on 'Navigator'

Step 3: A window titled 'Navigator' will appear. Next, click on Indicators.

Step 4: You should see the **BuySellArrowScalper** in the Indicators folder. Double click on the Buy/Sell Arrow Scalper file and click OK to load it onto your chart.

Step 5: Once you attach BuySellArrowScalper, make sure to enable the two options as shown below and only then click OK.

Step 6 (Important): Next you will see the activation window on your chart, as shown on the screenshot below. You will need to enter your receipt number to activate Buy/Sell Arrow Scalper.

Your receipt number is the Order ID generated by clickbank after your purchase of Buy/Sell Arrow Scalper. You need to copy/paste this number in the "Receipt number" field and click "Validate" to activate the indicator on your system.

You have 60 seconds to enter the receipt number. If you are out of time, simply try again by attaching the indicator to the chart once more. Be faster this time!

Your order details are shown to you immediately after your purchase has been completed. Also this information will be sent to the email address you provided when purchasing.

In case you entered a wrong email when purchasing, you can click the link as shown below to change your email address on file and resend the order details:

Order Confirmation and Customer Receipt

Note: This transaction will appear on your statement as "CLKBANK*COM" or "CLICKBANK"

Order Number:

Order Date:

Customer Name:

Customer Email:

(edit contact information)

IMPORTANT: Please be advised that if you decide to request a refund, the indicator license will automatically deactivate. You will lose access to Buy/Sell Arrow Scalper and will no longer be able to use it!

If you need any assistance, please contact our technical support team. Our email is: karl@karldittmann.com

Informer

Buy/Sell Arrow Scalper has been enhanced with a smart informer system, which is designed to make your trading more pleasant and convenient.

The informer shows the indicator name, current signal, trend power, time until next candle and current time.

MUST READ RULES on how to use the signals

Important Rule #1:

Do not use the indicator on a flat market! Use the indicator ONLY at active market hours – for example London session, US session.

Trend will not be noticeable on a weak market (night time, Christmas period, other holidays etc...) keep reading and I will explain everything...

Important Rule #2:

- Identify a global trend. (Remember? Trend is your friend?)
- Ignore all signals against a current GLOBAL trend!
- Try using the informer to find out how strong the current trend is.

Example:

Global trend is up – but you get a “sell” signal (It’s better to ignore it and wait for a “buy” signal to enter)

This is the most important rule, if you follow it you will have almost no losing trades at all.

Often signals that are against the global trend win as well. However, entering these trades might be more risky, than trading with the direction of the trend.

Important Rule #3:

The next highly important rule: Do not trade and do not use the indicator on a sideways trend. This is a “MUST follow” rule.

If you DON’T follow or ignore the rules above – good results are NOT guaranteed!

Stop Loss

Place your stop loss according to the popup alert SL.

In most trades stop loss is usually calculated with this formula:
Previous bar high or low + spread + extra number of pips.

You can adjust the Stoploss in the indicator INPUTS.

IMPORTANT: Set stop loss for ALL your trades and DO NOT deviate from it. Once the trade has touched your stop loss, be disciplined and close the trade. This will protect you from major capital losses.

Entering Trades

When a blue arrow appears (as shown on the screenshot to your left) it's a signal to buy.

When a red arrow appears (as shown on the screenshot to your right) it's a signal to sell.

Exiting Trades

Option 1

Exit your trades when the Buy/Sell Arrow Scalper issues the opposite trading signal. This ensures that you trade with maximum profits and exit right before the market is expected to reverse.

If you enter on a **buy** signal (**blue**)

- exit as soon as a sell signal is generated (**red**).

If you enter on a **sell** signal (**red**)

- exit as soon as a buy signal is generated (**blue**).

Option 2

You can also exit according to the TakeProfit (TP) level that is shown in the popup alert window. This is a very good method that a lot of traders use.

Option 3

Another exit mechanism which is highly effective is to exit near strong support or resistance levels. It is a method that generates exits earlier, so you take profits early. Good method if you prefer trading in a more safe manner.

Time Frames and Pairs

-M1 and M5 only

-Works on all major pairs

(Best results on EUR/USD, GBP/USD, USD/CAD, USD/JPY and EUR/JPY)

Signal Popup Alert Window:

EURUSD, M1 – pair, timeframe
BUY/SELL @ Price – entry price
TP – Take Profit
SL - Stoploss

Input Parameters:

Variable	Value
PeriodSetting	3
TakeProfit	100
StopLoss	50
InfoComer	CORNER_LEFT_UP
SoundAlert	true
EmailAlert	false

**All the Inputs are ready to use/trade by default.
You don't have to change anything.**

PeriodSetting is the most important parameter. It's set to 3 by default.

PeriodSetting=3 – Safe Mode (Default)

PeriodSetting=2 – Medium Mode

PeriodSetting =1 – Aggressive Mode

IMPORTANT: I recommend you DO NOT change the period setting and trade with the default value. It's the optimal choice for most traders. The default value gives the best and most importantly more safe results.

Although I DO NOT recommend changing the period setting value, you can still experiment with the above mentioned values only if you feel confident with your trading. Remember, lowering the period setting might lead to more false signals.

Stop Loss and Take Profit (StopLoss and TakeProfit) – I also highly recommend to use the default values for SL and TP, however you can change them according to your personal preference.

No matter if you are using 4 or 5 digits broker, the indicator will adjust stop loss and take profit accordingly. So if you decide to change stoploss or take profit, just remember to follow this formula: 100=10 Pips. The indicator will automatically adjust this value.

So for example, you want to set stop loss to 4 pips (no matter if you are using 4 or 5 digit broker) just enter StopLoss 40 and the indicator will automatically turn it into the appropriate value for your broker. If you are using 5 digit broker and want to set stop loss to 4 pips, you will still have to enter 40.

The next parameter is **InfoCorner**, which is responsible for moving the informer in any of the corners of your trading chart. It's useful to change this input when the info box is coming on top of the price and makes the signals hardly visible.

CORNER_LEFT_UP – Upper Left Corner

CORNER_RIGHT_UP – Upper Right Corner

CORNER_LEFT_DN – Bottom Left Corner

CORNER_RIGHT_DN – Bottom Right Corner

Tip: If you want to remove the informer from the current chart, just set the corner value to CORNER_NONE. To put it back on, use any other value.

If you wish you may change the sound (**SoundAlert**) and email (**EmailAlert**) alerts to true/false. By default, sound alert is set to "true" and email alert to "false"

EMAIL alert setup:

Setup your metatrader4 to send email:

Email alert must be activated in the Buy/Sell Arrow Scalper INPUTS. After it's activated, all you have to do is setup your own mail server info...

Email setup can be done in: Tools => Options => Email

If you need more info on how to setup an email alert, go to [youtube.com](https://www.youtube.com) and search for "mt4 email setup" there are plenty of free explanation videos.

Recommendations

Try to use the indicator ONLY during ACTIVE market!

Do not use the indicator on a weak/slow market – outside recommended trading hours (London or US sessions). Signals never work well on a weak market; this has been proven many times...

The London session is the largest market and it opens at 08:00 GMT or 03:00 EST and closes at 17:00 GMT or 12:00 EST.

Trading is best between 08:00 GMT and 10:00 GMT

The New York session opens at 13:00 GMT
or 08:00 EST and closes at 22:00 GMT or 17:00 EST.

The best trades occur in the first 2-3 hours.

The time is shown in 24:00 format.

IMPORTANT: It is extremely important to trade only following the current trend! It will cut ALL bad trades! Try to avoid trading against a trend.

Example:

If the current trend is up and the indicator shows “BUY” signal – place a trade.

If the current trend is up and the indicator shows “SELL” signal – NO TRADE! Wait for the next “BUY” signal...

Stay away from using the signals when you see unclear trend, flat or sideways trends – example:

Money Management

Money management is a very important concept that has an enormous effect on draw downs and margin calls. The cardinal rule of money management is the following:

You should only risk 1-3% of your account on any single trade.

You may have heard this rule a hundred times before, but it is amazing to see how many good traders fail to comprehend this concept – and don't understand why they are wiped out again and again, despite great entries and timing of trades.

Another important concept that is related to your **stop loss**:

In this strategy you learned how to place a stop loss for each setup.

This stop loss is calculated regardless of your level of risk or your equity, and is based solely on price-action. After a stop loss is set, calculate your trade size so you achieve the right percent of risk for your trades.

For example: your stop loss is 10 pips, and your equity is 10,000\$, you wish to risk 2% of your equity in this trade, so you enter a trade with 2 lots – so your risk is 200\$, or 2%.
