

User manual EA “Barrier”

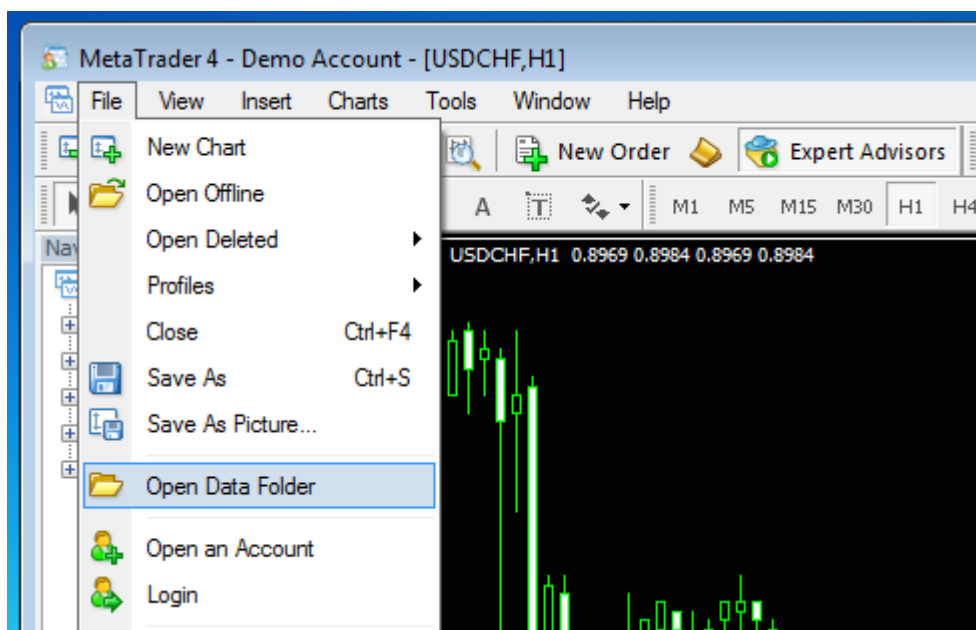

Installation of Expert Advisor

It should be used with regular MetaTrader4 application for PC. It is not supported by mobile platforms yet, doesn't work with binary options and other latest MT4 “innovations”. But it works perfectly with 4 and 5 digit brokers that support MT4.

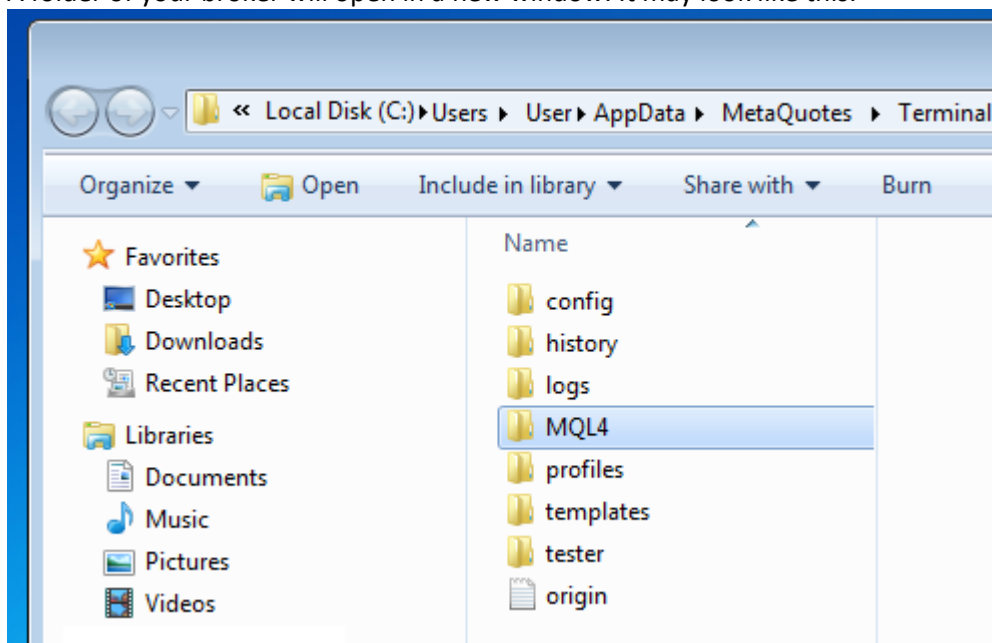

Step 1. MT4 > File > Open Data Folder ... MQL4>Experts

1.1. If you read this manual, you have ex.4 file: **Barrier v1.0.ex4** and copy it. Right-click and select Copy.

1.2. Start MetaTrader4 if it is closed. Click a **File** button, select **Open Data Folder**. As below:

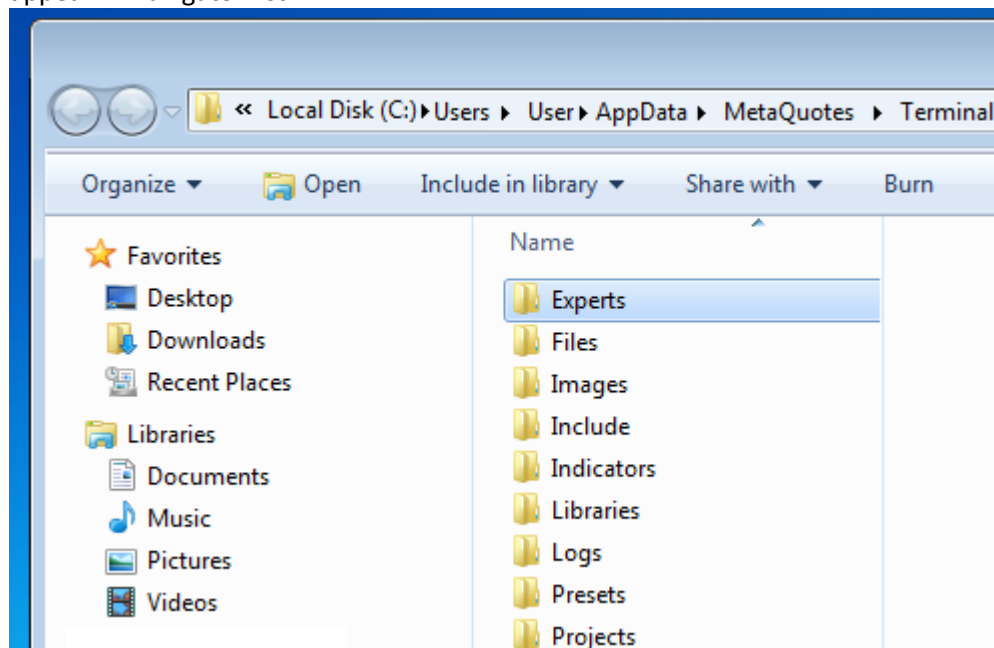

A folder of your broker will open in a new window. It may look like this:

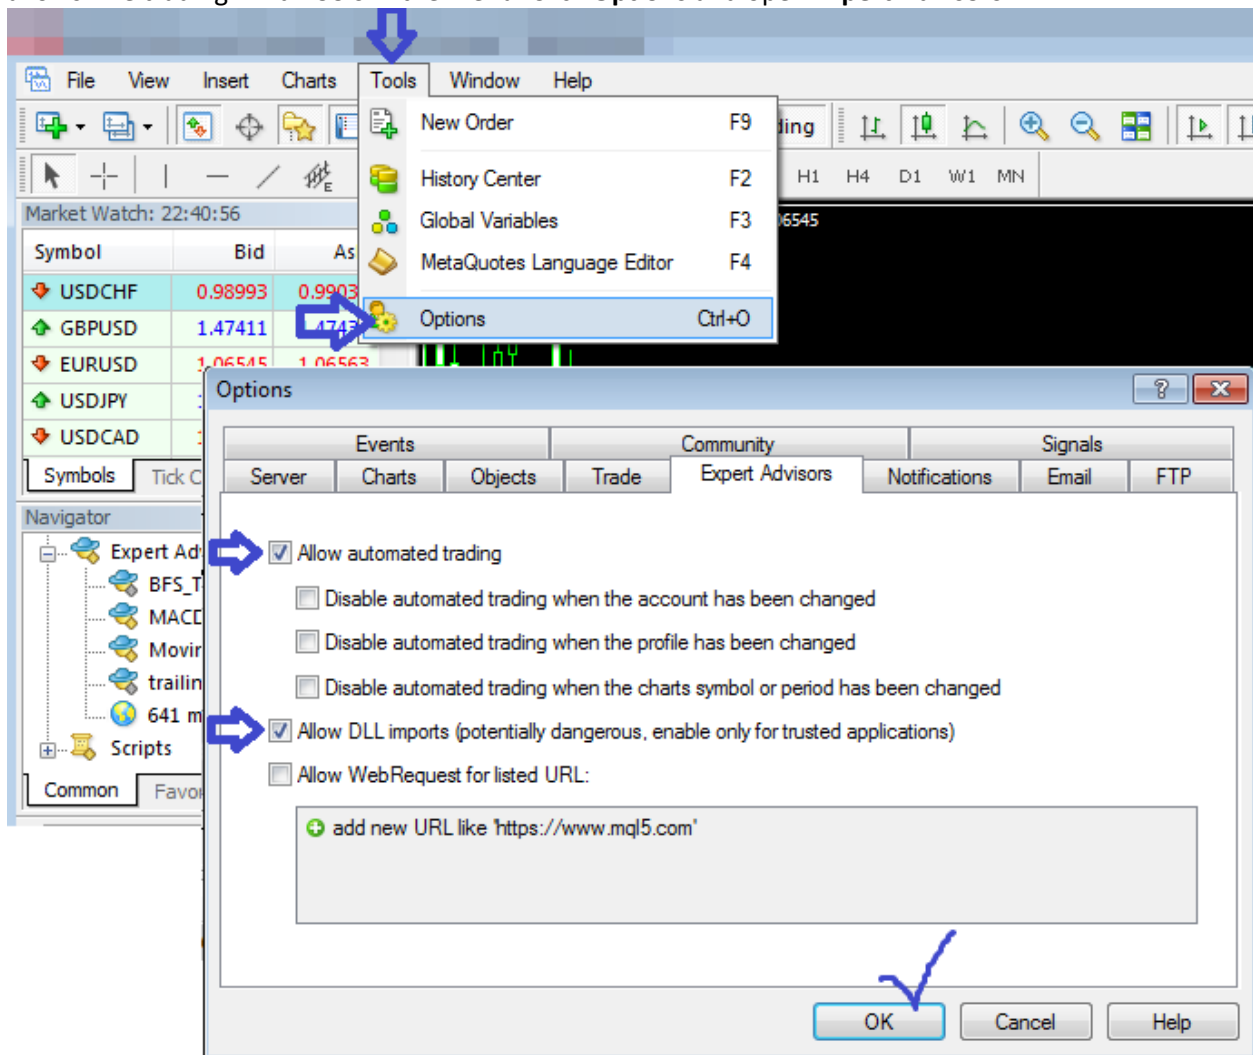

1.3. Open **MT4** folder. Find **Experts** folder. Now Paste the selected ex.4 file Trident robot inside **Experts** folder.

1.4. Please **close MetaTrader4** and Start it again. **Only after you restart** the application, Trident Robot will appear in Navigator list.

Step 2. MetaTrader4 settings

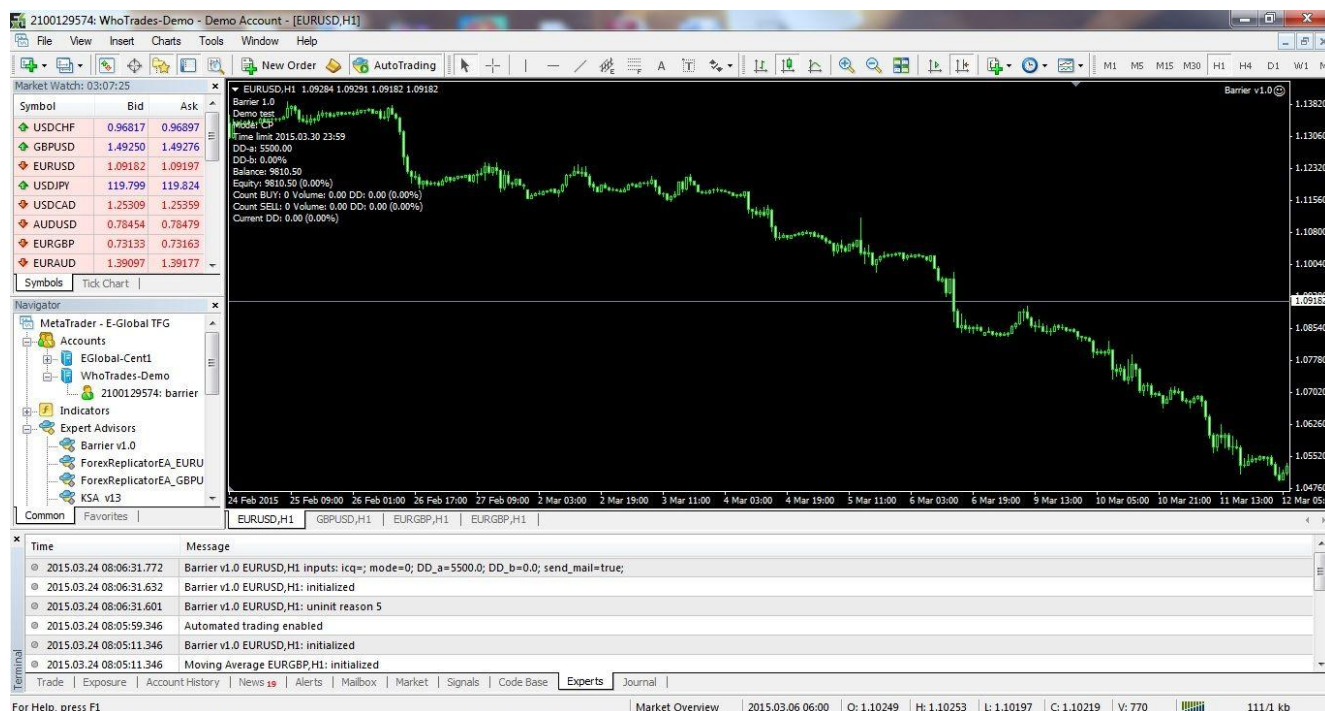

2.1. Check that your account is active and internet connection is on. Now you need to check if your terminal allows Live trading. Find **Tools** in the menu. Click **Options** and open **Expert Advisors**.

Click OK to save it.

2.2. Open a new any chart. Switch to any time-frame.

Right click on **Barrier v1.0.ex4** in Navigator section. Select **Attach to a chart**.

Step 3. Modes

EA “Barrier” can perform the following functions:

A. In “CP” mode (control over a particular currency pair, the number of pairs is not limited)

- Monitoring the drawdown for the currency pair upon which it is “hung”;
- Sending an email upon reaching the drawdown specified;
- Closing all the timeframes of a given currency pair (so that trading advisors cannot draw the orders), except for its own timeframe;
- Closing all the orders, including the postponed ones, of a given currency pair (the trade on other currency pairs goes on);
- “Barrier” is ready for operation again – you can open the new timeframes for a given currency pair, set up trading advisors and continue to trade.

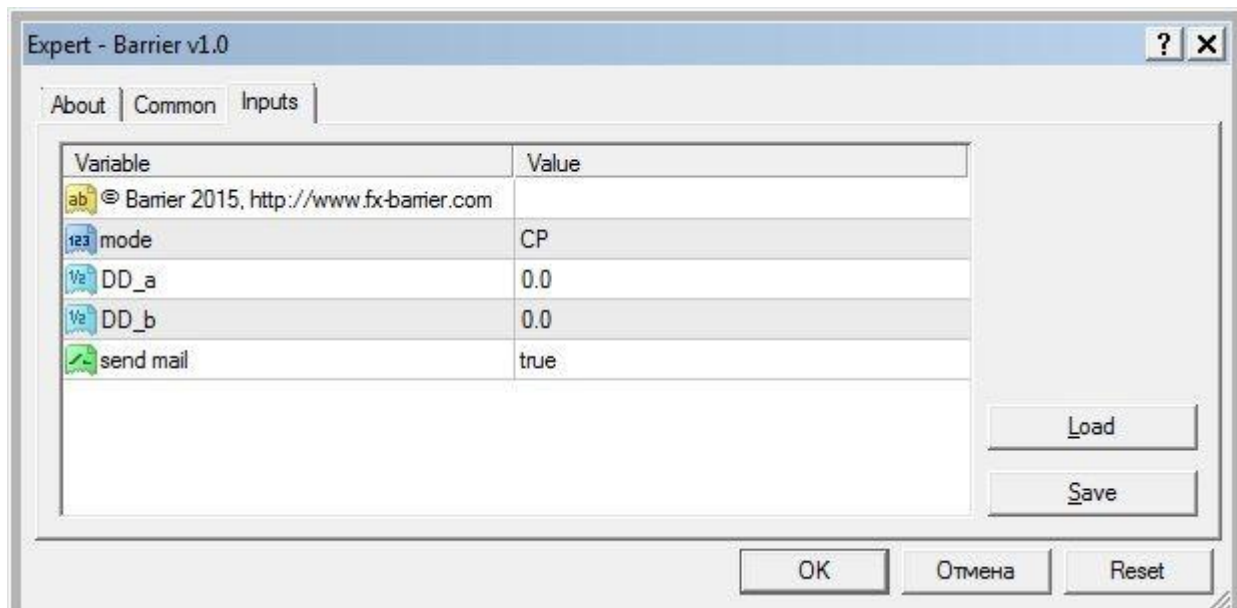

B. In “ALL” mode

- Providing control of the total drawdown under the account – if set on any currency pair;
- Sending an email upon reaching the drawdown specified;
- Closing all the terminal charts, except for its own one;
- Closing all the orders, including the postponed
- “Barrier” is ready for operation again – you can open the new timeframes for a given currency pair, set up trading advisors and continue to trade.

Note: Only a single drawdown parameter is set in both “CP” and “ALL” modes – either DD_a or DD_b, while the other parameter must be set to 0.

C. In “INFO” mode

When setting the parameters of **DD_a** (drawdown in money) and **DD_b** (drawdown in % of the balance) =0, the info panel is displayed only. Expert Advisor does not close any orders and timeframes. EA shows the data, depending on the set mode: “CP” or “ALL”.

3.1 In the "CP" mode "Currency Pair" - set one EA for each currency pair.

For example:

EUR/USD H1 – EA "Barrier", EUR/USD M15 – You EA1, EUR/USD M5 - You EA2 etc.

GBP/USD H1 - EA "Barrier", GBP/USD M1 – You EA1, GBP/USD D1 - You EA2 etc.

etc.

3.2 In the "ALL" mode "ALL Currency Pair" - set one EA.

For example:

EUR/USD H1 – EA "Barrier", USD/CHF M15 – You EA1, USD/CHF M5 - You EA2, GBP/USD M1 – You EA1,

USD/CAD D1 - You EA2 etc.

Step 4. Configuring the Send e-mail

See the documentation for the terminal MT4
