

The Slam Dunk Forex Trading

Method User Guide

Hello, thanks for your purchase and welcome to the world of forex day trading. Please read this guide carefully and you will soon be winning a ton of pips on a daily basis. This system uses the MetaTrader (MT4) to generate all trades. If you already have experience trading forex currencies, you're ahead of the game. But for those that are not familiar with forex or as we say in the trade “newbies”, the next few red paragraphs will explain how to load the system indicators on to your trading platform. Most of you experienced forex traders can skip this:

Assuming you have your brokers MT4 platform loaded on your computer. If your completely new to this, you need to at least open a demo account with a Forex Broker so you can start practicing. Etoro is a well established forex broker who has the MT4 platform available for both demo and live accounts and can accommodate both International and U.S. Residents. [CLICK HERE](#) to check them out. For this method, we must have a broker with the MT4 Meta Trader platform and unless you have lots of money, one that allows at least 400:1 leverage or better.

Unless you have a lot of money or you're little bit greedy you will very seldom have 2 trades open at the same time in this method so the high margin will not get you in trouble but you will be able to trade this system with a few hundred dollars rather than needing a few thousand.

O.K. now that you have a forex account and have downloaded an MT4 trading platform, your ready to load the system. (1) First shut down the platform and then open "my computer" on your desktop by double clicking on it. Then double click on your main hard drive which is usually "C" drive, then double click on the "programs file". Find your broker's MetaTrader file and double click on that. It will usually say your broker's name and MetaTrader or MetaTrader and then your broker's name.

(2) Once that is opened, scroll to the “templates folder”, open it and drag

and drop or copy and paste the slam_dunk.tpl file into it.

NOTE : In the “experts” folder, there is also a template folder – do not place your template file into this one.

(3) Now scroll back up and open the "experts" folder and drag and drop or copy and paste the “HIDDEN TP&SL_EA.mq4” and the “Tight_Trailing_Stops.mq4” files into it.

(4) Now you want to scroll to and open the "indicators" folder. Put your "BB_Alert Arrows.ex4", "3rdGenMA.ex4", “SchaffTrendCycle.ex4” and your “Super8 Filter.ex4” indicator files into that folder the same way you put the template file into the template folder. (5) Exit everything, open your trading platform on your desktop. Open a 15 minute eur/usd chart and right click anywhere on the chart or click on the templates icon at the top and then left click on the "Slam_dunk" template and you should be ready to go on that chart. (6) Then open a 15 minute gbp/usd chart and do the same and also the same with a eur/jpy. You should be ready to rock and roll! You can also trade any other pairs you so desire but the top 3 usually produce at least one awesome trade per day. If you have a problem, send me an email and I'll help you. Please follow the 6 step by step instructions above and I doubt you will have any trouble.

For you experienced guys, .tpl in the template folder, .mq4's in the experts folder and .ex4's in the indicators folder. Load your platform and open the Slam_dunk template.

Best trading sessions are about 1 hour before to about 4 hours after the opening of the New York, London and lastly if you can't trade one of those two, the Asian session can produce some nice trades at times. Good idea to add the aud/usd and nzd/usd to monitor also for the Asian session.

O.K. Let's see how we trade this baby. I'll first give you text instructions and then the link to a video similar to the one on the website.

1. It's always a good idea to start your trading session about 1 hour before the opening of any of the 3 main sessions. At the time of this writing (2/26/2012) The London opens at 3am EST, The New York at 8am EST and the Asian at 4pm EST.
2. It is not necessary to stare at your charts as you will receive and audible/text alert when a possible trade arrow pops up. Turn up your volume and you can be doing other things on the computer or even just close by.
3. Once we receive the alert, we want to monitor the pair we received it on fairly closely.
4. The next indication will be the yellow custom MA line crossing the black up or down in the direction of the trade. After this happens, line up your crosshairs on that particular candle and check the top

bottom window “the super 8 filter” The bar must be blue for a buy trade or red for a sell trade.

5. Then check the bottom window underneath and the custom stoch line should be heading up or already at the top for a buy trade or heading down or already on the bottom for a sell trade.
6. The final confirmation and very important for the accuracy of the system is to, click on the vertical line icon at the top of the chart, it is beside the crosshairs and put a vertical line through the generated candle for the trade. Then at the top of the chart, click on the 1 hour chart and check to see if the yellow custom MA has crossed the black in the direction of the trade like on the 15 minute chart. If it has you have a valid trade, if it hasn't – no trade. If it has and the super 8 filter is also the right color, you have a very strong trade. Either way go back to the 15 minute chart and place an at market buy or sell, whatever the case may be.
7. Right after that even if I am going to monitor my trade, I like to load the Hidden S/L T/P EA and enter a 20 pip stop/loss and a 100 pip take/profit. You can put in any parameters that you are comfortable with as far as S/L and T/P goes. Just remember if you close the platform, the EA stops working. You can minimize it on your desktop and that will be fine but if you have to close down your computer, you will need to put in a regular stop/loss and take/profit in your broker's trade window on the platform. Another way is to load the Tight_Trailing_Stop EA with a setting your comfortable with and let it manage the trade for you. Again, it is an EA so you must leave your platform open for it to work.

My favorite way is to set the Hidden Ea and also monitor the trade off and on as I do other work on my computer. I don't mind spending 2 to 6 or 7 hours monitoring off and on for a profit of around \$1000. or even more. Now I realize that this can be a problem for some people, because

of job or other obligations so that is why I have added the 2 EA's to the system and one can also set S/L and T/P on their broker's platform, close down and go about their business. It all depends on your particular situation and patience. Anyhow, here is the link to a video where I show you how a trade is set up. Give it a minute to load :

<http://screencast.com/t/x7imXIFQZq>

That's about all there is to it. It is about as close to K.I.S.S. That I can get it. This system will generate an awesome trade most every day and most of the time with very little draw down of only a few pips or less. This is why I call it the "Bread and Butter System" and of course I have to bring in a little basketball with SLAM DUNK. If you have any questions, send me an email to : admin@globalhomebiz.net and I try to answer support questions within an hour if at all possible. Happy Trading, God Bless and Cheers, From Trader Ed
