Trading any financial market involves risk. This report and all and any of its contents are neither a solicitation nor an offer to Buy/Sell any financial market.

The contents of this material are for general information and educational purposes only (contents shall also mean the website http://www.forexgeminicode.com/ or any website the content is hosted on, and any email correspondence or newsletters or postings related to such website). Every effort has been made to accurately represent this product and its potential. There is no guarantee that you will earn any money using the techniques, ideas and software in these materials. Examples in these materials are not to be interpreted as a promise or guarantee of earnings. Earning potential is entirely dependent on the person using our product, ideas and techniques. We do not purport this to be a "get rich scheme."

Although every attempt has been made to assure accuracy, we do not give any express or implied warranty as to its accuracy. We do not accept any liability for error or omission. Examples are provided for illustrative purposes only and should not be construed as investment advice or strategy.

No representation is being made that any account or trader will or is likely to achieve profits or losses similar to those discussed in this report or anywhere on http://www.forexgeminicode.com/. Past performance is not indicative of future results.

By purchasing any content, subscribing to our mailing list or using the website or contents of the website or materials provided herewith, you will be deemed to have accepted these terms and conditions in full as appear also on our site, as do our full earnings disclaimer and privacy policy and CFTC disclaimer and rule 4.41 to be read herewith. So too, all the materials contained within this course, including this manual, whether they appear on our domain(s) or are in physical form, are protected by copyright. "Warning: The unauthorized reproduction or distribution of this copyrighted work is illegal. Criminal copyright infringement, including infringement without monetary gain, is investigated by the authorities and is punishable with imprisonment and a fine." We reserve all our rights in this regard.

Alaziac Trading CC, in association with http://www.forexgeminicode.com/, the website, content, and its representatives do not and cannot give investment advice or invite customers or readers to engage in investments through this course or any part of it.

The information provided in this content is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method. One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results. All of which can adversely affect actual trading results.

We reserve the right to change these terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting http://www.forexgeminicode.com/

Your use and reliance on the materials is based on your acceptance of such Terms and Conditions and policies as appear on the site.

Introduction

Hi and welcome to the Forex Gemini Code system indicators installation manual! In this short manual, I will walk you through the steps that you need to follow in order to setup your charts with the system indicators so that you can begin trading the Forex Gemini Code system.

At this stage you should already be aware of the fact that the Forex Gemini Code trading system uses custom indicators that are not available on the MetaTrader 4 trading platform, or anywhere else for that matter. So, the only place where you can download the Forex Gemini Code system indicators is the Forex Gemini Code member's only area.

Getting your charts setup in order to trade the system is actually very simple and within a few minutes of downloading the software, you should be ready to begin trading.

The first step is to ensure that you have the MetaTrader 4 (MT4) trading platform installed on your computer. Most traders will already have the MT4 trading platform installed and ready to go but if you are still new to trading or you have not used this platform before, you may download it from your broker's website or simply download a generic copy by visiting the www.metatrader4.com website.

Once you have downloaded and installed the MT4 platform, visit the Forex Gemini Code member's area and sign in using your login credentials. Next click on the Download button on the top menu bar and on the following page you will be presented with a short video. Watch the video then click on the download link to download the Forex Gemini Code system indicators.

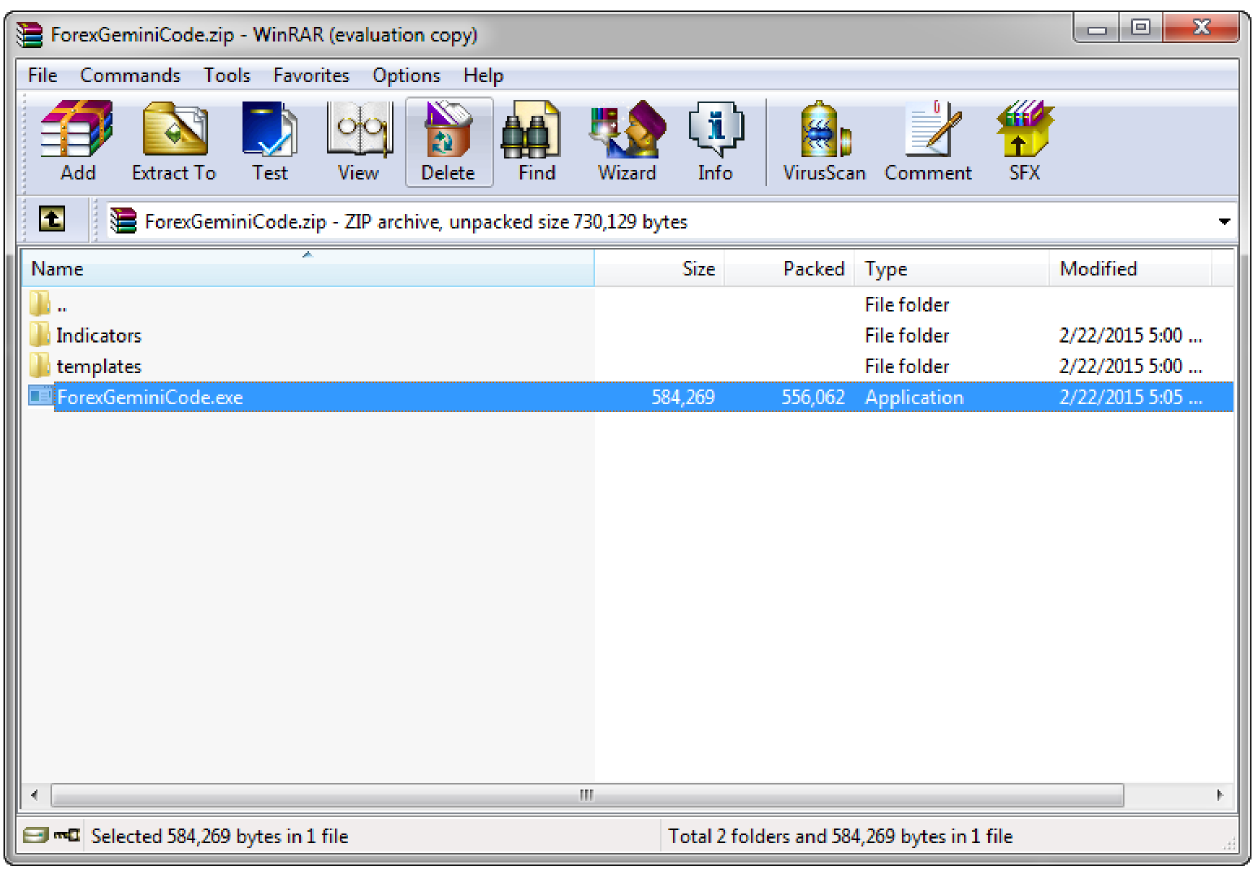
Now that you have downloaded the software, it's time to complete the installation process.

Installation

The installation of Forex Gemini Code system indicators is very easy, since it comes with an auto-installer which will take care of everything for you.

After you have downloaded the ForexGeminiCode.zip file, if you have Windows 7 or higher you can either right click on the file and choose "Extract" or simply double click to open it. If you have a Windows version prior to Windows 7, you'll have to download a free tool for extracting zip files, like WinRar or WinZip.

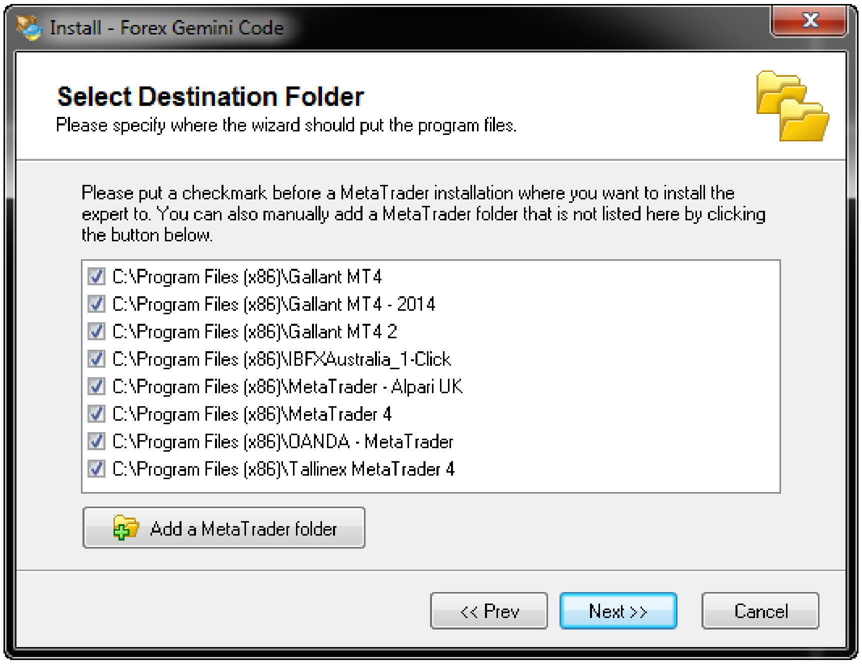
After you've opened (or extracted) the downloaded archive, simply double click on the ForexGeminiCode.exe file inside to start the auto-installation process.



If you get a security warning, click “Run”. If you get User Account warning, click “Yes”. You will then be prompted with the main installation window as shown below, where you can simply click on the “Next” button.

The next step is to read the license agreement, check “I accept this agreement” and click “Next”.

Next, select the MT4 platforms you wish to install to. If your broker's platform is installed, but does not show up on the list, you can use the "Add a MetaTrader folder" button to tell the auto-installer where your platform is installed. After that, hit the "Next" button.

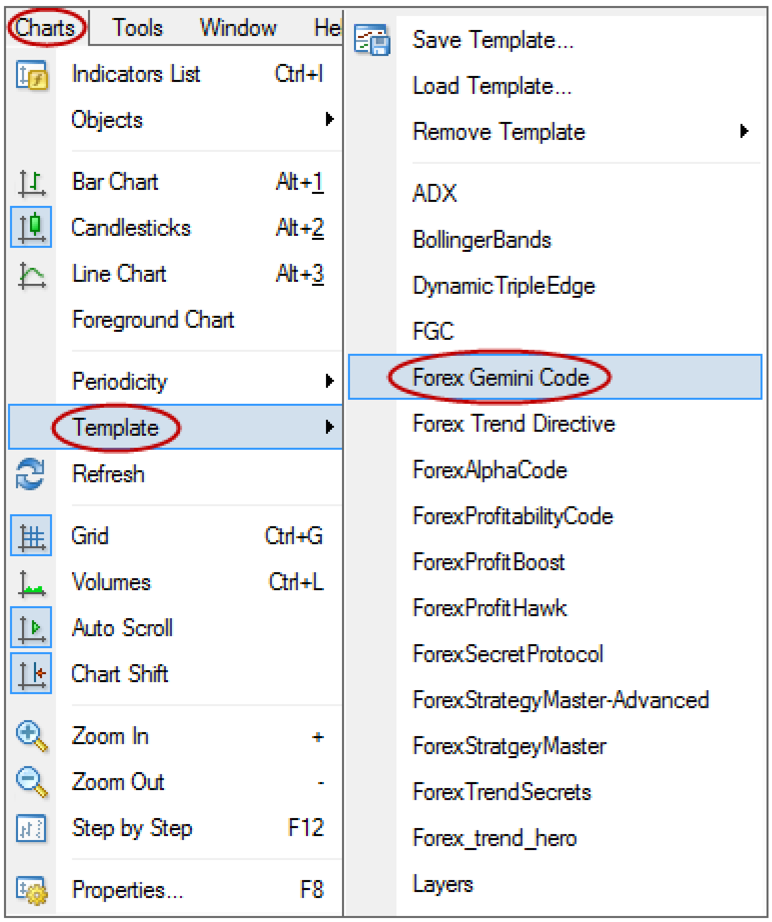


For the next three steps, you can just click "Next" and the system indicators will be installed for you. On the final screen click "Finish" and you're done.

USING THE CHART TEMPLATE

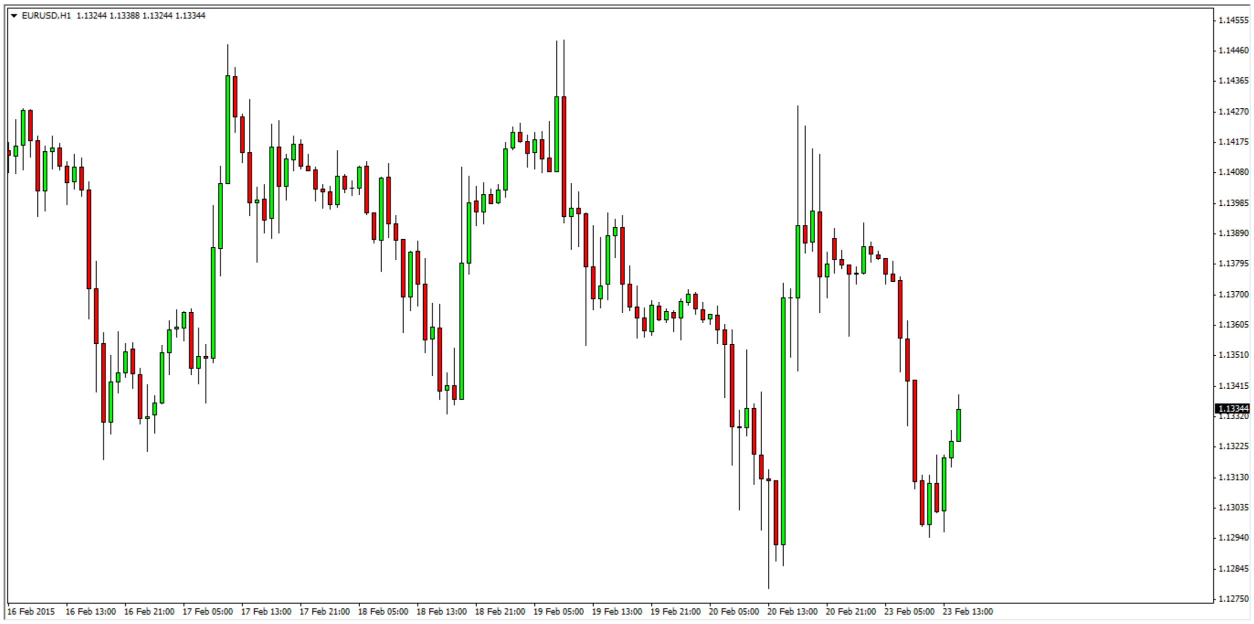
With the installation of the system indicators, you'll notice that the Forex Gemini Code chart template is installed as well. Applying the chart template will change the look of your chart so you can then apply the Forex Gemini Code system indicators.

To apply the template you can click on Charts on the menu bar > click on Template > then click on Forex Gemini Code.

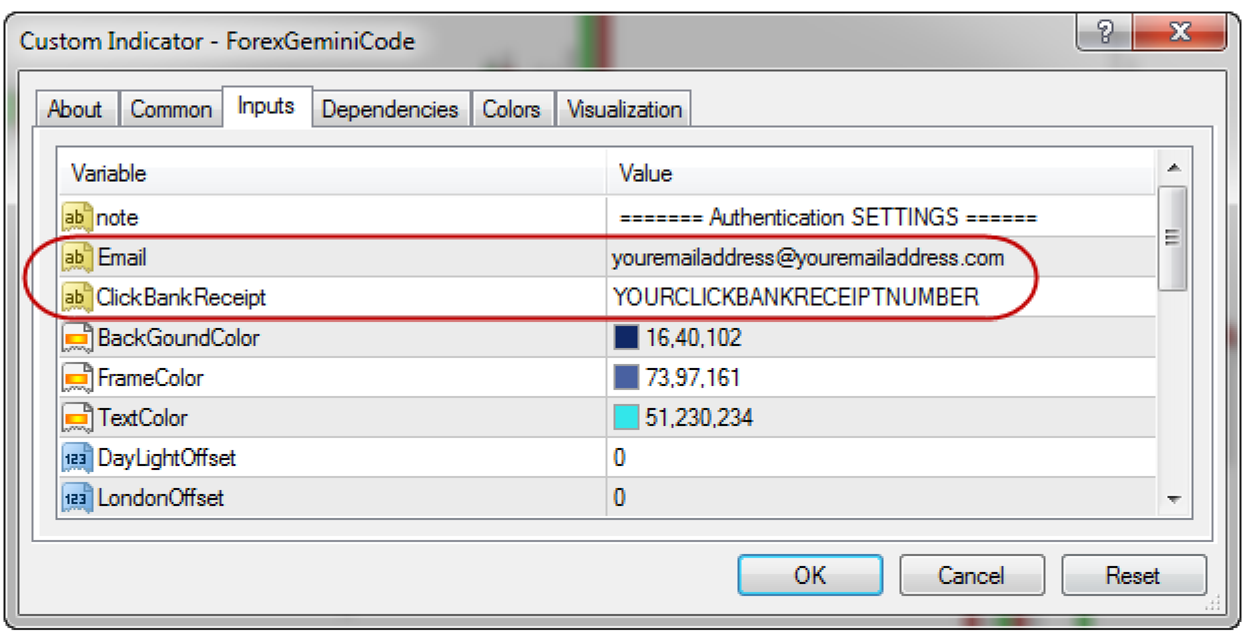


IMPORTANT! *Applying the chart template will change the colors and settings on your chart in preparation for applying the system indicators. However, the system indicators will need to be added onto your charts separately and in the following section, we will go through the steps required to apply the Forex Gemini Code and the Forex Gemini Meter custom indicators.*

After applying the chart template, your chart will appear as follows:

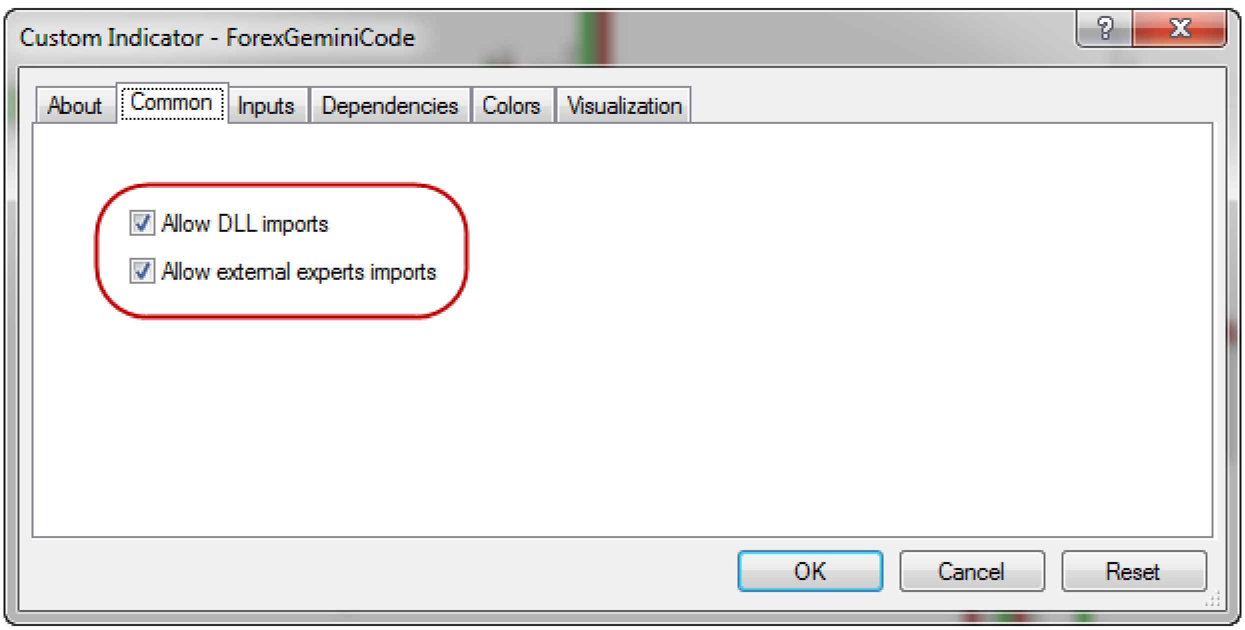


You can now go to the Navigator window (click View > Navigator or press CRTL + N) and expand the Indicators list. The ForexGeminiCode and ForexGeminiMeter indicators will now be present. To apply the first custom indicator, double click on the ForexGeminiCode custom indicator or, click on it then drag and drop it onto your chart. You will be presented with a properties window that appears as shown on the image below:

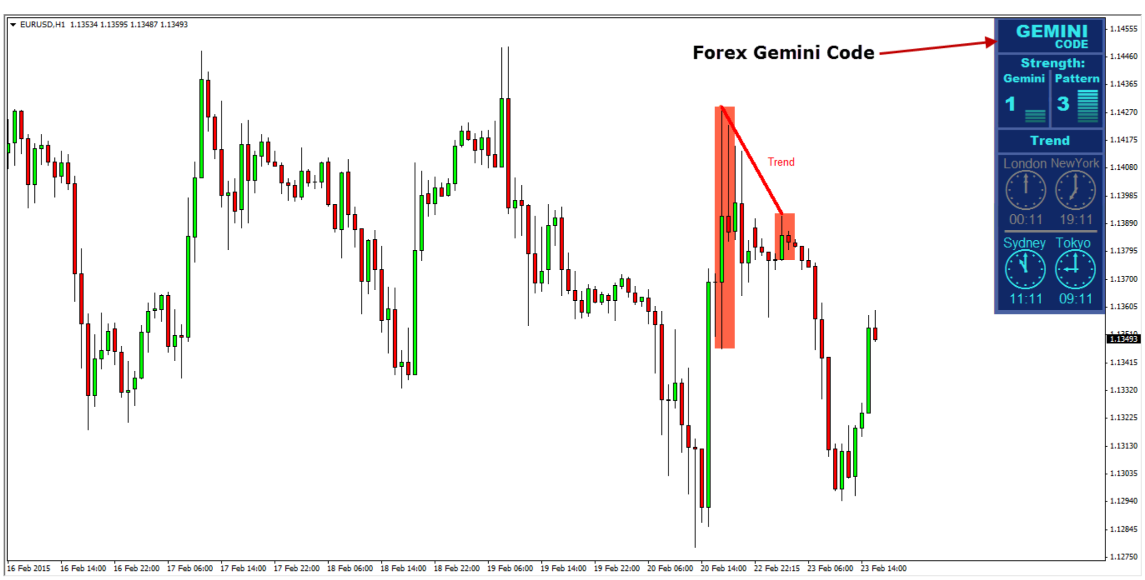


Double click on the Value side of the parameters window next to the Email variable and enter your email address used to login to the Forex Gemini Code members area.

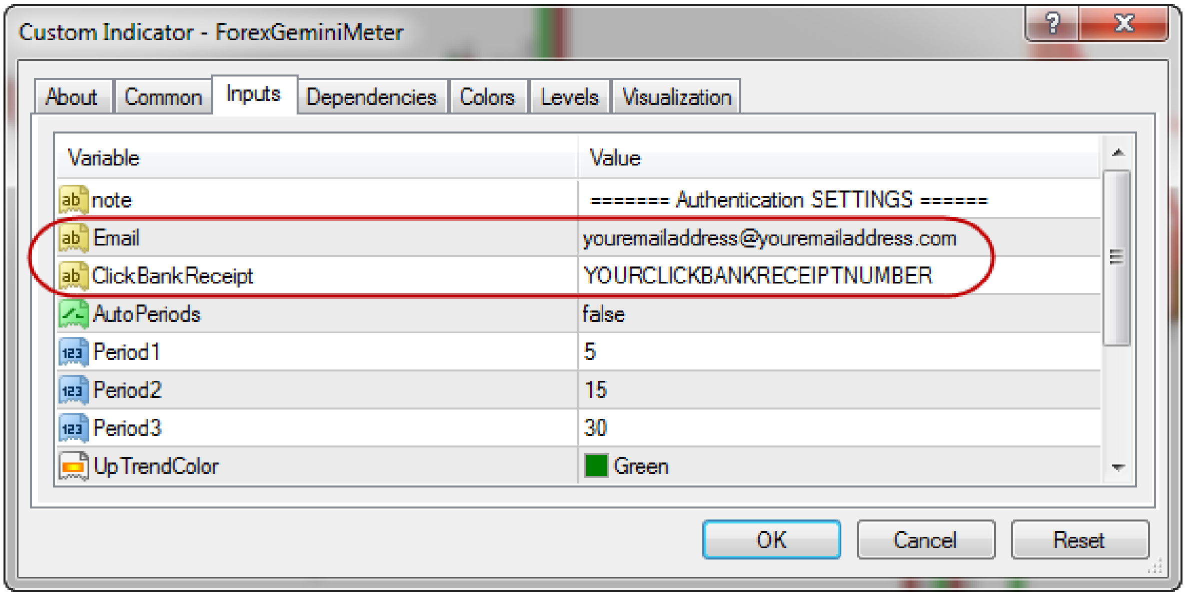
Next, double click on the Value side of the parameters window next to the ClickBankReceipt variable and enter your ClickBank receipt number. Now, click on the Common tab and ensure that the Allow DLL imports and Allow external experts imports options have been ticked:



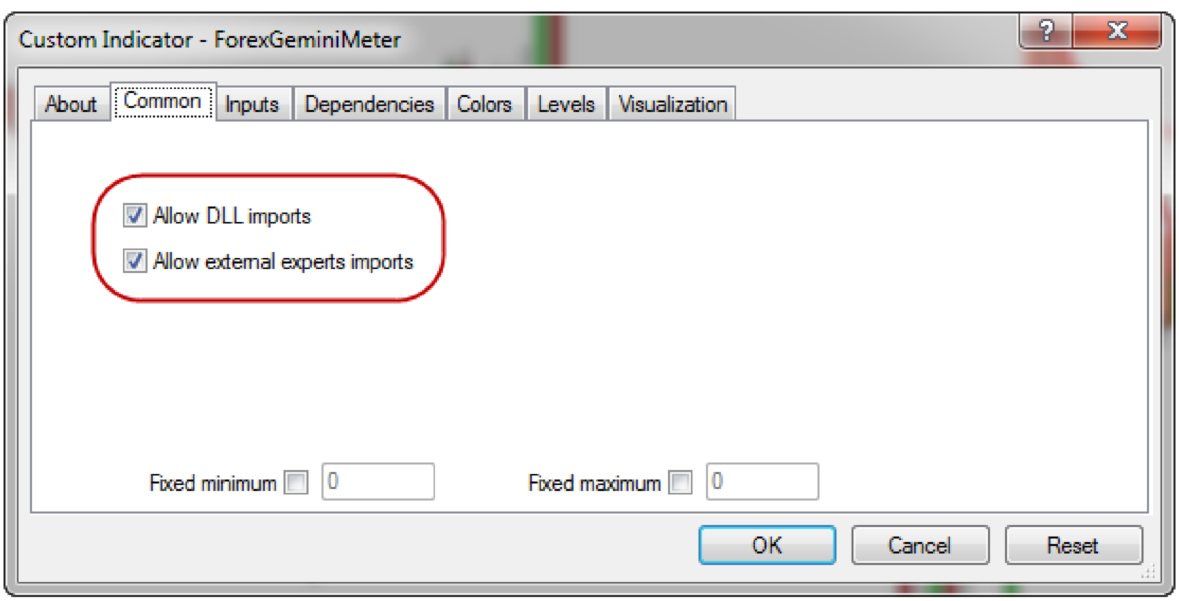
The Forex Gemini Code indicator will now be applied to your chart:



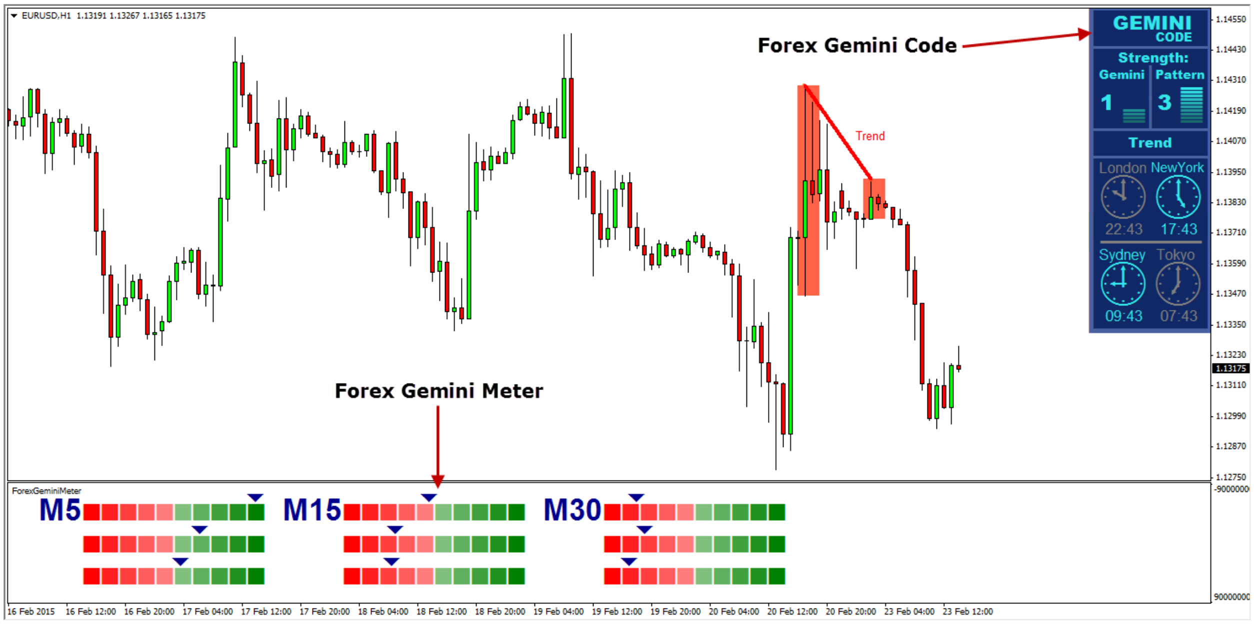
The next step is to apply the ForexGeminiMeter indicator. Return to the Navigator window and double click on the ForexGeminiMeter custom indicator or, click on it then drag and drop it onto your chart. You will be presented with a properties window as shown on the image below:



Double click on the Value side of the parameters window next to the Email variable and enter your email address. Next, double click on the Value side of the parameters window next to the ClickBankReceipt variable and enter your ClickBank receipt number. Click on the Common tab and ensure the Allow DLL imports and Allow external experts imports options are ticked:



As soon as you have applied both the indicators to your charts you will be presented with a chart that appears similar to the image shown below:



The Forex Gemini Code system relies on two key indicators which have now been installed on your MetaTrader 4 trading platform.

On the right hand side of the chart you will find the Forex Gemini Code indicator and on the bottom of your charts, in the separate window pane, you will find the Forex Gemini Meter.

These are the indicators that we will use in order to identify trade alerts as per the rules of the Forex Gemini Code system.

At this stage there is no further configuration required on your behalf, you are now ready to begin trading the Forex Gemini Code trading system as per rules outlined in the trading manual and the cheat sheets included in your package.

However, it is important that you are familiar with the different parameters that are available for further customization on each of our indicators. In the following chapter, I will give you a description of each parameter so that you can experiment with the system and fine tune your trading settings to suit your personal preferences.

Indicator Parameters

When you place the ForexGeminiCode and ForexGeminiMeter indicators onto your chart, you'll be presented with a properties window. You can also access that window at any time by going to Charts > Indicators List. Then select the indicator from the list and choose "Edit".

This will bring up the same properties window. The indicators come with certain parameters that you can tweak to suit your personal preference.

Here is a short description of the ForexGeminiCode custom indicator parameters:

Email – Your email address used to register on our website.
ClickBank Receipt – Your ClickBank Receipt number received after buying the course which was mailed to you on the day of your purchase.
BackGroundColor – The background color of the ForexGeminiCode indicator.
FrameColor – The color of the frame around the ForexGeminiCode indicator.
TextColor – The color of the text on the ForexGeminiCode indicator.
DayLightOffset – To be used in case there is daylight savings and the time does not correspond to the time on your platform.
LondonOffset – To be used if the London time does not correspond to the time on your platform due to daylight savings time.
NewYorkOffset – To be used if the New York time does not correspond to the time on your platform due to daylight savings time.
SydneyOffset – To be used if the Sydney time does not correspond to the time on your platform due to daylight savings time.
TokyoOffset – To be used if the Tokyo time does not correspond to the time on your platform due to daylight savings time.
SendAlert – Used to show a popup alert when there is a trade alert.
SendMobileNotification – Used to push a notification to your mobile app

when there is a trade alert.
drawGeminiLines – Draws the line connecting the two Gemini patterns.
UpGeminiColor – The color of the shaded blocks highlighting Buy alerts.
DownGeminiColor – The color of the shaded blocks highlighting Sell alerts.
Description_Color – The color of the text inserted on the chart next to a valid alert.
minDistance – The minimum number of candles between Gemini patterns.

Now that you are familiar with the parameters for the ForexGeminiCode custom indicator let's take a closer look at the ForexGeminiMeter custom indicator. Here is a short description of the ForexGeminiCode custom indicator parameters:

Email – Your email address used to register on our website.
ClickBank Receipt – Your ClickBank Receipt number received after buying the course which was mailed to you on the day of your purchase.
AutoPeriods – Set to TRUE to show the next 3 higher timeframes, if you want to show specific timeframes change to FALSE and configure the following parameters to the display the timeframes you would like to see.
Period1 – Shows the next higher timeframe or any other timeframe you want (active only if AutoPeriods is set to FALSE). Enter the number of minutes to display the timeframe you would like to view (For example: 5 = M5, 15 = M15).
Period2 – Shows the next higher timeframe or any other timeframe you want (active only if AutoPeriods is set to FALSE). Enter the number of minutes to display the timeframe you would like to view (For example: 60 = H1, 240 = H4).
Period3 – Shows the next higher timeframe or any other timeframe you want (active only if AutoPeriods is set to FALSE). Enter the number of minutes to display the timeframe you would like to view (For example: 1440 = D1, 10080 = W1).
UpTrendColor – The color of the blocks showing a Bullish trend.
DownTrendColor – The color of the blocks showing a Bearish trend.
TextColor – The color of the text on the indicator.
ArrowColor – The color of the arrows showing a Bullish or Bearish trend.

Conclusion

At this stage you should be familiar with the ForexGeminiCode and ForexGeminMeter custom indicators that will be used to identify valid Buy and Sell trade alerts as part of the Forex Gemini Code trading system.

As I've mentioned previously, there is no need to modify the settings on these indicators. The default settings are the very same settings that I use in my own day to day trading so if they work for me, I have no doubt that they will work for you too.

Having said that, I know that some traders simply love to experiment with and fine tune their indicators so if you fall into this category, you now know all about the different parameters on the indicators to experiment to your hearts content.

By this stage you should have your charts set up and you should now be ready to begin trading the Forex Gemini Code trading system.

If by some chance you've hit a snag while setting up the indicators or you're just not sure what to do, simply get in touch with us using one of the available support options and I or one of the traders on my team will be more than happy to assist you.

The Forex Gemini Code system is the result of all my years of trading experience and I'm sure that it will perform as well for you as it does for me. I know that you will enjoy trading it as much as I do. So let's get trading!

Here's wishing you the very best with your trading!

Vladimir Ribakov
