Introduction

Welcome and thank you for purchasing the “Super Fast Indicator”. The “Super Fast Indicator” is the fastest trading tool designed primarily to trade Forex pairs successfully and consistently.

The indicator is based on the newest 2013 special algorithm that predicts the price movement 1-2-3 bars faster than any other known Forex indicators (to my knowledge..) available today!

The main principle of the indicator is **5 custom built-in indicators complex + ichimoku advanced filtering system - All in one!**

The hit rate of the indicator is about 75-85+% in most currencies, and higher in the currency pairs recommended in the next chapters.

We advise that you read and make sure you understand the entire system before putting it into practice. Experiment and gain experience in demo accounts before trading with your own money. If you find that you need further help or have any questions, do not hesitate to contact our technical department. The indicator works on metatrader4 platform only.

We wish you great trading success

www.superfastindicator.com

Installing the Indicator

IMPORTANT: If you don't have MetaTrader ® installed, please download it from this link:

http://www.alpari.co.uk/files/site_uk/oooftware/MT4_set_up.exe

Follow the instructions and open a demo or real account. We recommend trading the indicators on a demo account before proceeding to real accounts.

The indicator file:

superfast005.ex4 – for 5 digits broker

superfast004.ex4 – for 4 digits broker

➔ **Step 1:** Copy the indicator file EX4 into your /experts/indicators/ folder. This folder is in the folder of the MetaTrader trading platform.

Examples:

If you are using the Interbank FX Trader broker, the folder will be at
C:\Program Files\Interbank FX Trader 4\experts\indicators\

If you are using the Alpari MetaTrader broker, the folder will be at
C:\Program Files\MetaTrader - Alpari\experts\indicators

If you are using the FXDD broker, the folder will be at
C:\Program Files\FXDD – MetaTrader 4\experts\indicators\

If you can't find your /experts/indicators/ folder, please contact our technical support.

➔ **Step 2:** Open the MetaTrader® platform, and click on View -> Navigator. You can also click on CTRL+N.

Click on 'Navigator'

➔ **Step 3:** A window titled 'Navigator' should appear. Click on Custom Indicators.

The Navigator

➔ **Step 4:** You should see the **superfast005** or **superfast004** in the Custom Indicators folder. Double click on indicator and click OK to load it onto your chart.

Here is a video showing how to install indicators onto the MetaTrader ® platform:

<http://www.youtube.com/watch?v=F-VusM-Q8rw>

If you need any assistance, do not hesitate to contact our technical support team.

IMPORTANT RULES - How to use the signals

- Identify a current trend. (Remember? Trend is your friend?)

Actually it is easy to determine a current trend just by opening a higher timeframe chart:

- *Example: if you trade on M15 - open a M30 chart and determine the current global trend manually.*
- *We don't trade down trend signals if a current trend is up... just ignore those signals.*

- Ignore all signals against a current GLOBAL trend!

Example:

Trend is up – but you get a “sell” signal (ignore it!)

Wait for a “buy” signal to enter. This is the most important rule #1, if you follow it – you will have no losing trades at all.

- The most important rule #2: do not trade and do not use the indicator in a sideways market. This is the “MUST follow” rule#2.

If you DON'T follow or ignore the rules above – good results are not guaranteed!

Entering Trades

When the Super Fast Indicator© generates trades it changes colors.

Enter a trade as soon as you get a popup alert!

To use the Super Fast Indicator© to generate signals:

Long trades occur when the Super Fast Indicator© changes color from Red to Blue. (confirmed trend change)

Short trades occur when the Super Fast Indicator© changes color from Blue to Red. (confirmed trend change)

Stop Loss

Option 1

Stop loss level will be printed in the popup alert window (previous candle high or low + extra value according your trading style. That value can be changed from the indicator's parameters).

Option 2

Place your stop loss according to strong support and resistance levels (safe mode)

IMPORTANT: Set stop loss for all your trades and do not deviate from it. Once the trade has touched your stop loss be disciplined and close the trade. This will protect you from major capital losses.

Exiting Trades

Option 1

Logical Take profit level will be printed in the popup alert window

Option 2

Exit trades when the Super Fast Indicator issues the opposite trading signal. This ensures that you trade with maximum profits and right before the market reverses.

Another exit mechanism which is highly effective is to exit near strong support or resistance levels. It is a method that generates exits earlier, so you take profits earlier.

Time Frames and Pairs

The indicator was optimized for M1, M5 (parameters by default are perfect). The indicator will work fine on other timeframes too with default settings just if you want less false signals on higher timeframes you can change “period” in the indicator’s inputs (this will slow down the speed a little) to:

M15 – period 12

M30 – period 12-13

1H – period 13-16

4H – period 18-22

- All major pairs – I recommend EUR/USD

Parameters:

You can change the PERIOD parameter (by default 9) for example to “8” to speed up the indicator and get more entry signals.. but you will get more false signals.. so, be careful. SL and TP extra values can be changed according your trading style. (For example for 5 digits brokers SL value 160 = 16 pips, for 4 digits brokers SL value 16 = 16 pips)

Popup alert and email alert

All levels: Entry price, Stop loss, Take profit, Timeframe will be printed in every popup alert that you get!

Setup your SMTP local servers, email username, password to receive instant alerts with all levels and signals via email.

The screenshot shows a Windows-style dialog box titled "Options". It has a tabbed interface with tabs for "Server", "Charts", "Objects", "Trade", "Expert Advisors", "Email", "Publisher", and "Events". The "Email" tab is currently selected. Inside the dialog, there is a checkbox labeled "Enable" which is checked. Below this, there are several text input fields: "SMTP server:" with the value "smtp.server.com:25", "SMTP login:" with the value "admin@server.com", "SMTP password:" with a masked password of ten dots, "From:" with the value "admin@server.com", and "To:" with the value "admin@server.com". A "Test" button is located below the "To:" field. At the bottom right of the dialog are three buttons: "OK", "Cancel", and "Help".

Sample trades and profit

Sample trades M15 chart EUR/USD

Remarks: 90 pips, 25 pips on the screenshot above – just sample numbers (plus/minus couple of pips..)

Sample trades M5 chart GBP/USD

Remarks: 10 pips, 25 pips on the screenshot above – just sample numbers (plus/minus couple of pips..)

Recommendations

Stay away from using the signals and opening trades on unclear trends or sideways trends, see sample below:

Another great feature of the indicator –equal size bars will warn you of a sideways market.

Money Management

Money management is a very important concept that has an enormous effect on drawdowns and margin calls. The cardinal rule of money management is the following:

You should only risk 1-3% of your account on any single trade. You may have heard this rule a hundred times before, but it is amazing to see how many good traders fail to comprehend this concept – and don't understand why they are wiped out again and again, despite great entries and timing of trades.

Another important concept is related to your **stop loss**: In this strategy you learned how to place a stop loss for each setup. This stop loss is calculated regardless of your level of risk or your equity, and is based solely on price-action. After a stop loss is set, calculate your trade size so you achieve the percent of risk you trade with. For example: your stop loss is 10 pips, and your equity is 10,000\$. You wish to risk 2% of your equity in this trade, so you enter trade with 2 lots – so your risk is 200\$, or 2%.
