Forex InfoBot

User's Guide

by Rita Lasker

2013

www.forexinfobot.com

Introduction

I am Rita Lasker, the head of Green Forex Group with my team of programmers and professional currency market traders.

By popular demand from our numerous members we have created a new and highly unique product for those who prefer safe and laid back, comfortable trading.

This is NEITHER a robot NOR an indicator. It's essentially a new product that is much safer than any robot. However it's much more profitable than any indicator.

Any TREND will be profitable! Sell or Buy – we've thought through BOTH options!

ForexInfoBOT – the system, that got it the best from the both worlds: robots and indicators. Much safer than any robot and highly informative, than any indicator. Smart24 Forex INFO technology follows market trend around the clock, while DUO-DYNAMIC Intraday algorithm offers you only the BEST trading opportunities.

The system that sends you all possible types of notifications, calculates all levels and in timely fashion warns you of a necessity to open or close the orders.

Today I am proud to present you our new Superb product - **Forex InfoBot**.

Yours,

Rita Lasker & Green Forex Group.

How Forex InfoBot works

Once a day Forex InfoBot lines up 4 lines in the chart, that serve as recommended trigger-lines for your trades. It's advisable to open orders at those levels, what is more, Forex InfoBot would show the optimal levels for Stop Loss and Take Profit.

At the precise moment when price crosses over that Sell or Buy lines, the system generates an arrow on the chart pointing in the direction of opening. In the right corner of the chart there will be an instantly displayed recommendation as to what order it's necessary to open and at what levels to set SL and TP.

In addition to that, a trader also receives an alert in the window for such, and if your system is fine-tuned properly, there should also be an instant e-mail notification sent with the signal and delivered to the Inbox.

There'll be none of the graphic pile-ups, dotted lines, signs or bars. Everything is simple, plain and concise. There's no distraction from the main point of trading – making money.

To sum up, the maximum number of trades per day may be 2: if both Sell and Buy conditions would be triggered.

Forex InfoBOT Installation and Setup

Forex InfoBot is a plug-in that requires **MetaTrader 4** to function.

If you do not have MetaTrader 4 installed, you need to download it from a Forex broker web site.

Choose only a broker with a good reputation. Many forums have entire sections exclusively dedicated to brokers. There you can learn about all the „pluses“ and „minuses“ of each broker. Don“t be lazy – take a look and see it for yourself.

We recommend using only well known, reputable brokers that have been on the mark for a long time, such as:

[FxPro http://fxpro.com](http://fxpro.com)

[Alpari UK http://alpari.co.uk](http://alpari.co.uk)

Follow the links above, choose your Forex broker, and download MetaTrader 4 for free. After you download MetaTrader 4, install it on your computer. This is a standard and simple operation.

Step 1.

If you already have MetaTrader 4 installed, please check what your build of MetaTrader platform is.

It is extremely important to update the trading platform often. If you run the previous versions of MT4 you may experience problems with software installation. Please contact your broker support to learn about the latest available build. To check your build please open the menu **Help/About...**

The following message will appear:

Please note that each broker has its unique name in the left upper part of the window message, the build is mentioned there below.

Step 2

Now, when you have the latest build of MetaTrader 4, place the file:

forex_infobot.ex4

into **C:/Program Files/xxxxx/experts/indicators**, where **xxxxx** is the name of your MT4.

For example, the MT4 from FxPro is called **FxPro - MetaTrader**, and the complete path will look like this:

C:/Program Files/FxPro - MetaTrader/experts/indicators.

Step 3

(if you have your own demo or your own real account already, skip Step3)

Launch MetaTrader 4 by selecting it from the Start menu. When the application launches, it presents a window in which you need to enter your demo account details.

Fill out all the fields carefully.

Selecting the "I agree to subscribe to your newsletters" checkbox makes the OK button available. Once you have filled out all the fields, click OK.

Personal details
To open an account, please fill out all the following fields:

Name: min 6 chars

Country: State: min 2 chars

City: min 2 chars Zip code: min 3 chars

Address: min 6 chars

Phone: min 6 chars Email: name@company.com

Account Type: forex Currency: USD

Leverage: 1:100 Deposit: 5000

☐ I agree to subscribe to your newsletters

When you click OK, your demo account will be registered and you will be signed in with the system with your demo account details.

Your account number is displayed on the left of the window title. If you see it there, it indicates that your account has been registered and you have logged in the system.

Step 4

Take a look at the Navigator panel on the left of the main window.

The Navigator panel displays all the accounts, indicators, expert advisors, custom indicators, and scripts available to you. Let's focus on **Custom Indicators** for now.

If you followed the simple instruction above, you should see **forex_infobot** under Custom Indicators.

If you don't see it there, please make sure you have placed the file **forex_infobot.ex4** in the correct folder, as described above. Relaunch MetaTrader 4 and check **Custom Indicators** again.

If **forex_infobot** is still not listed there, contact our technical support by sending an email to: support@ritalasker.com

Step 5

Open **EURUSD and GBPUSD charts, H1**.

ONLY these pairs and timeframe are recommended.

Drag and drop **forex_infobot** from the Navigator panel to the chart. Make **"Common"** tab settings the same as below.

Click **OK**

Open Inputs tab. Here you can adjust the following settings:

arrow_size – the size of the indicating arrows.

1 is the smallest size, 5 is the largest. Please choose the size within this 1-5 range.

font_size1 – font size of the upper line of the text alert on your chart (that appears in the right upper corner – see Sell! in the example below)

font_size2 – font size of TP and SL lines of the text alert on your chart.

UseAlert – disable or enable alerts.

Click **OK**

Signals

Once a day, in the beginning of a new trading day Forex InfoBOT would draw 4 lines right on your chart:

- BuyLine – a line that indicates the entry point for Buy order.
- BuyTPLine – a line that is a recommended Take Profit level for Buy order.
- SellLine - a line that indicates the entry point for Sell order.
- SellITPLine - a line that is a recommended Take Profit level for Sell order.

Stop Loss for Sell order should be placed at BuyLine.

Stop Loss for Buy order should be placed at SellLine.

If you know how to set pending orders, you may place 2 such orders as soon as you get the information from FX InfoBOT and you will have no need to watch its further signals for that day. It is very convenient.

If you have any difficulties with pending orders set up, you may just follow the signals. For example, when price reaches the BuyLine, you will get notified by:

- **A colored arrow** (blue for BUY, points UP)

und alarm

stem window alert with Buy or Sell direction and Take Profit and Loss levels recommendations

xt alert with Buy or Sell direction and TP/SL levels recommendation upper corner of your chart

A so

Asy

A to

- If you set up email notifications, you will also get **an email**

How to set up Email notification correctly is described in the **E-mail notification settings** section.

As soon as you receive such a signal, OPEN order.

To do this click New Order button that can be found in the Toolbar.

In the opened window please check that the pair and Lot Size are correct.

Enter Stop Loss, Take Profit.

As about **SELL** signals, the notifications would work the same. As soon as you get a Sell signal, open Sell.

Closing signals

Orders should be closed by SL or TP. If you need, you may close them manually.

Notifications set up

Sound alarms

When the signals are formed you will hear sound alarms. If you don't hear any alarms, please check if you have turned on the sound of your PC and check the settings in MetaTrader4 – **Tools – Options - Events:**

You need to check the box **Enable**. Apart from it if you see that the events in the list are red-crossed as in the picture above, it means the sound is muted for them. Choose the events you need and double-click on the yellow bell icon for enabling the sound. After you enable the sounds, the settings appear like this:

Email notification settings

To make you never miss a single signal even being away from your computer we inbuilt the function of Email alerts. After getting an email alert you might be able to reach your computer and place the orders. Though to make Email alerts be sent from your MetaTrader, you need to set it up correctly.

Email alerts can be tricky to set up but it's the most valuable and useful tool.

To start, it's important to know that the platform itself doesn't have the ability to send messages. It needs to log in to an email account to be able to send emails. This service is called **SMTP**.

Free email services like GOOGLE, YAHOO and HOTMAIL will not work as they use SSL protocol that is not supported by MetaTrader4.

Thus, there are **2 methods** to receive Email notifications:

- Using the email, provided by your ISP (Internet service provider)
- Using other SMTP resources like SMTP2Go

Method №1 is ISP SMTP

Internet service providers usually give an email address to their customers, and these email addresses typically offer SMTP service.

In your platform go to **Tools - Options** and select the **Email** tab from the top.

We'll see there boxes to enter your e-mail account information with examples in red. **If you don't know what the SMTP server address is**, contact your ISP (Internet service provider) customer service, and they'll tell you.

Options

Server Charts Objects Trade Expert Advisors **Email** Publisher Events

☒ Enable

SMTP server: smtp.company.com:25

SMTP login: name@company.com

SMTP password:

From: Your Name, name@company.com

To: Your Name, name@company.com

Test

The SMTP login and password fields are **your e-mail address and the password you use to access it.**

Options

Server Charts Objects Trade Expert Advisors **Email** Publisher Events

☒ Enable

SMTP server: smtp.company.com:25

SMTP login: name@company.com

SMTP password:

From: Your Name, name@company.com

To: Your Name, name@company.com

Test

The „**From**“ field is the same as your e-mail address, and the „**To**“ field is where you want your email to be sent to.

Options

Server Charts Objects Trade Expert Advisors **Email** Publisher Events

☒ Enable

SMTP server: smtp.company.com:25

SMTP login: name@company.com

SMTP password:

From: Your Name, name@company.com

To: Your Name, name@company.com

Test

Www.ForexWinners.Net

After you fill out all the fields you can test it. Press the **Test** button, and you will get a test message to the address that you wrote in the "To" field.

If you didn't get the test message at your email please check your messages in the Journal. And if you find there a message like this one:

Please contact your ISP (Internet service provider) customer service.

If you got a test message at the specified email address, then the e-mail notifications service is set up correctly and you will be able to get email signals.

Method №2 - SMTP2Go

Please follow the link www.smtp2go.com to register a new account. To evaluate this system it will be enough to choose Free Trial Plan – 10 Emails per day. If you like the way SMTP2GO works, you may later purchase Standard Plan – 50 Emails per day.

When the account registration is completed, you will be provided with SMTP server. In the section above there are described the settings of MetaTrader that you will need to fill out with the information you received from SMTP2GO.

How to increase your profit and PREVENT losses

The principle of trading with InfoBOT is to place the orders manually following the special conditions. If you don't want to lose your profit at the price reversals, we can recommend that you use Trailing Stop. In this case if price doesn't reach the set fixed TP value, Trailingator would still trail it and close the order in profit. So, basically, Trailingator will turn a loss-making order into a profit or at least would make it to close at break even.

It is the HANDS-FREE Stop Loss trailing tool for any pairs and any timeframe. It can set SL and TP automatically, trail your profit and much more. It is an intelligent Trailing Stop tool, responding to each and every order opened by you... It can control the trades placed by robot as well. On its own, it will set a Trailing Stop and keep a close watch on your order in a fully automated mode.

MAIN trading KEYS with Trailingator:

It allows to increase the **profit up to 40-50%**

It helps to reduce the losses up **to 30-60%**

Additional information you can find at Trailingator web-site. Please also note that it is on a sale now and you can get it on very special terms.

Good luck with your trading!

We will do our best to help you.
