You accept full responsibilities for your actions, trades, profit or loss, and agree to hold Forex Growth Bot and any authorized distributors of this information harmless in any and all ways.

Important Information Please Read First

1. Please be sure to activate your copy of Forex Invest Bot (instructions below).
2. Forex Invest Bot is designed for **EUR/USD** on the **M15** timeframe.
3. If you close trades manually, please restart mt4 as it can throw off the logic of Forex Invest Bot.
4. If you restart MT4 while a trade is open, Forex Invest Bot may lose control over that trade once you re-open it back up. (Fix Coming Soon)
5. You are allowed 1 account per license, that is DEMO or LIVE. You can switch accounts anytime using License Manager.
6. **LOT SIZE RECOMMENDATIONS: .1 Lots for every \$1,500, but recommend \$2,000 with every .1 Lots if possible. Safer settings are .05 lots for every \$1,000.**
7. You CANNOT activate Forex Invest Bot on weekends when market is closed.
8. DO NOT CHANGE SETTINGS WHILE TRADES ARE OPEN OR TIMEFRAME.

Some Extra Facts

1. Meta trader 4 must be open 24 hours a day 5 days a week (we recommend using a VPS).
2. Works with 4 and 5 digit brokers. No hedging, No grid, No martingale, FIFO supported. Please set FIFO = true if using a U.S based broker.
3. The robot trades 3 – 10 times per week. Some days it may not trade.
4. Important: Some antivirus software flags our software. Please make sure our software is exempt from your antivirus program, so it is not deleted or prevented from working.

Stuck On Verifying Or Other Possible Issue: This is most likely due to a Windows bug in user controls. This rarely occurs, but if it happens to you here is the solution:

Disable or Turn Off UAC (User Account Control) in Control Panel

1. In Control Panel to disable UAC in Windows 7, login to the system with the administrative account, go to Start Menu -> Control Panel -> User Accounts.
2. Click on Change User Account Control settings link.
3. Slide the slider bar to the lowest value (towards Never Notify me when)
4. Click OK to make the change effective.
5. Restart the computer to turn off User Access Control.

Pre-installation Instructions

Prior to installation of Forex Invest Bot please be sure you have done the following.

- Signed up with a Forex broker that provides Meta Trader 4.
- Meta Trader 4 completely installed.
- Your Meta Trader 4 account number.
- Optionally VPS setup, recommended, but not mandatory

Specific details below:

If you would like to have someone connect to your computer or VPS and install Forex Invest Bot for you please: [Click Here](#)

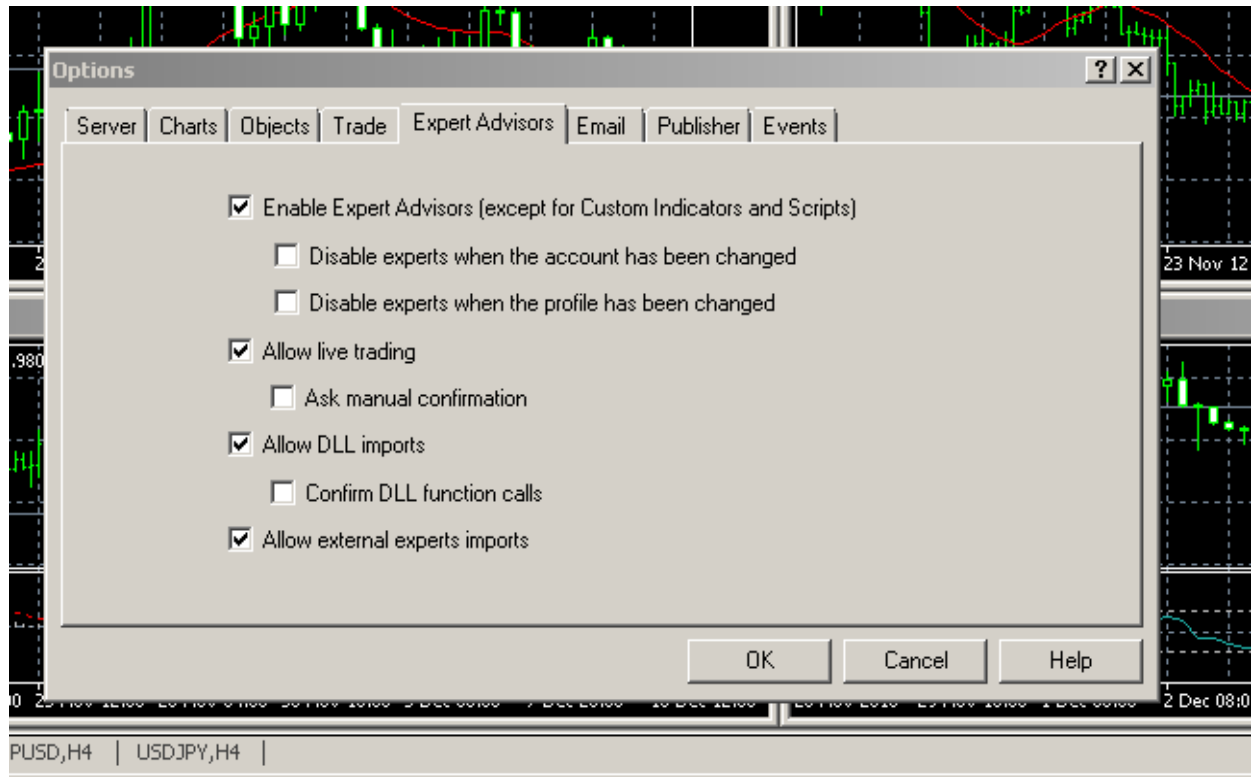

Setup Instructions for Meta Trader 4 Once Open

Now that Forex Invest Bot is installed and activated, please make sure the following settings are set in Meta Trader 4.

Click Tools, then Click Options.

The following screen will pop up, please click the Expert Advisors tab on top. Then make sure your check marks match the following, and then click OK.

Next the EURUSD chart is shown. If you do not have it up, click File, then New Chart, then EURUSD. **Next click on that chart, and click M15 on the top middle bar.**

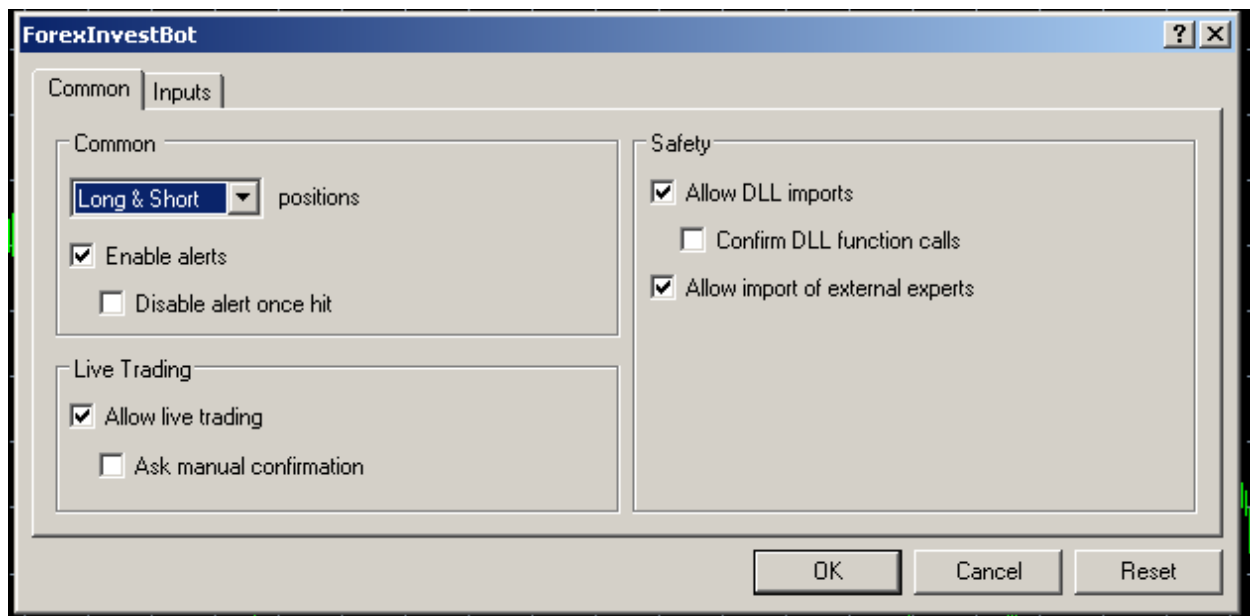

On the left screen you will see the following. Click The + next to Expert Advisors.

You will then see Forex Invest Bot on the left.

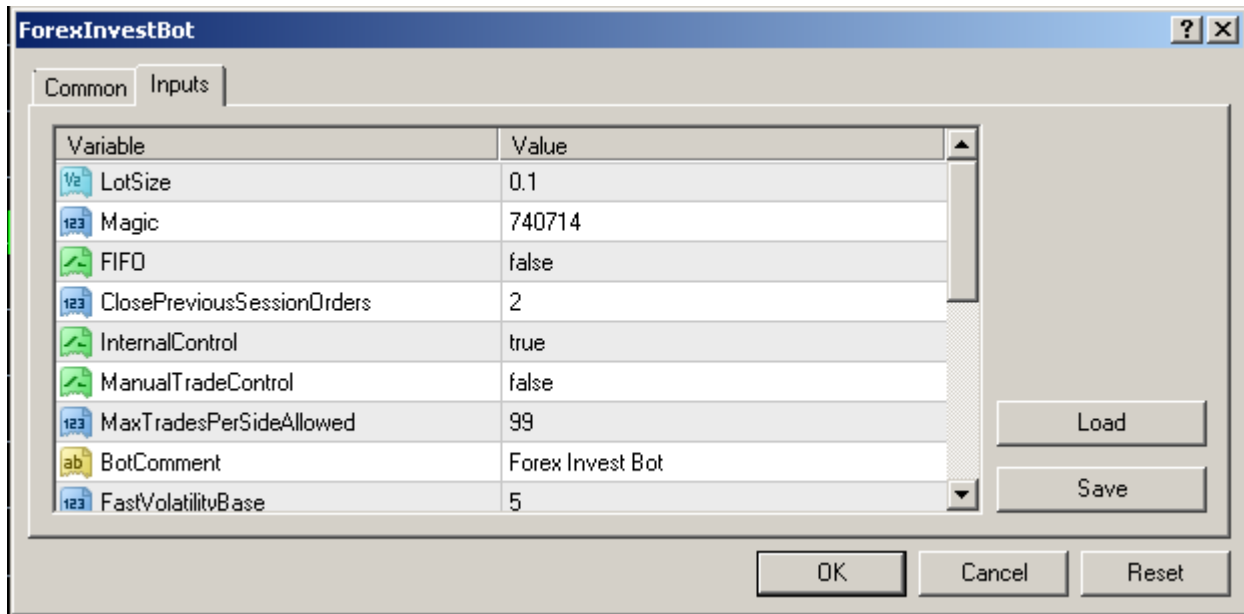

Next, drag the Forex Invest Bot name onto the EURUSD chart and a window will pop up as such:

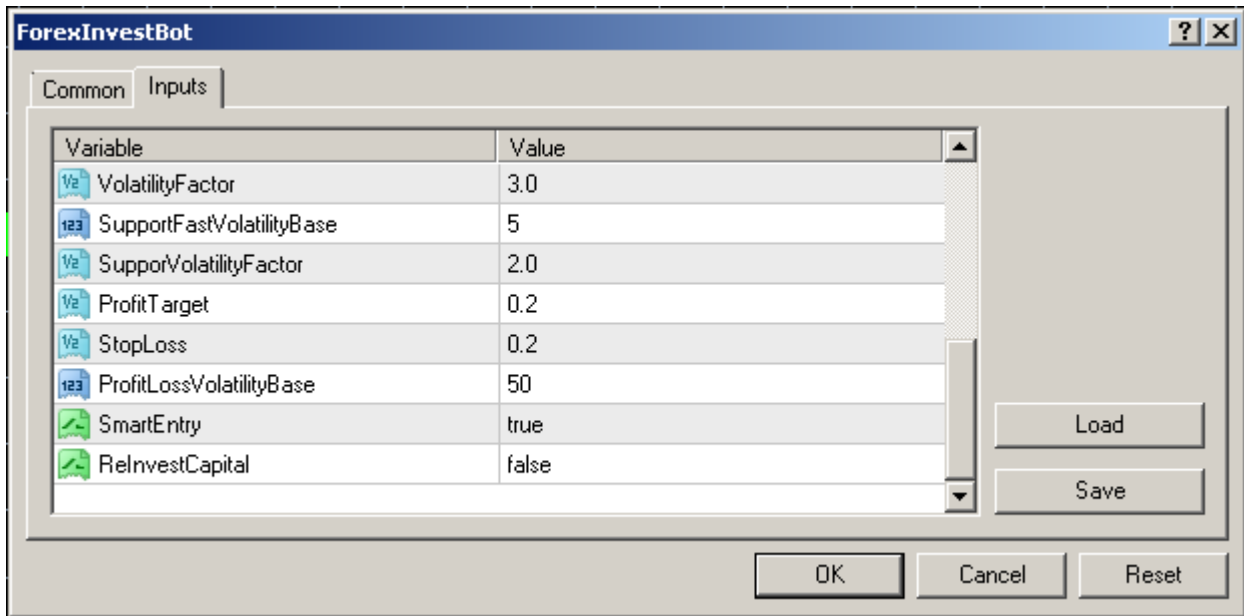

Make sure you have the same settings as shown above, and then click Inputs to change the settings of the robot itself.

If you click Inputs next, you will see all the settings you can adjust. An explanation of each setting is below.

The image shows the 'ForexInvestBot' window with the 'Inputs' tab selected. The 'Common' sub-tab is active, displaying a list of variables and their current values. The variables are: LotSize (0.1), Magic (740714), FIFO (false), ClosePreviousSessionOrders (2), InternalControl (true), ManualTradeControl (false), MaxTradesPerSideAllowed (99), BotComment (Forex Invest Bot), and FastVolatilityBase (5). To the right of the list are 'Load' and 'Save' buttons. At the bottom are 'OK', 'Cancel', and 'Reset' buttons.

Variable	Value
LotSize	0.1
Magic	740714
FIFO	false
ClosePreviousSessionOrders	2
InternalControl	true
ManualTradeControl	false
MaxTradesPerSideAllowed	99
BotComment	Forex Invest Bot
FastVolatilityBase	5

The image shows the 'ForexInvestBot' window with the 'Inputs' tab selected. The 'Common' sub-tab is active, displaying a list of variables and their current values. The variables are: VolatilityFactor (3.0), SupportFastVolatilityBase (5), SupportVolatilityFactor (2.0), ProfitTarget (0.2), StopLoss (0.2), ProfitLossVolatilityBase (50), SmartEntry (true), and ReinvestCapital (false). To the right of the list are 'Load' and 'Save' buttons. At the bottom are 'OK', 'Cancel', and 'Reset' buttons.

Variable	Value
VolatilityFactor	3.0
SupportFastVolatilityBase	5
SupportVolatilityFactor	2.0
ProfitTarget	0.2
StopLoss	0.2
ProfitLossVolatilityBase	50
SmartEntry	true
ReinvestCapital	false

Under input, generally we recommend default settings, but please adjust lot size based upon the following recommendations on the next page:

\$250 or below: .01 Lots

\$500: .02 to .03 Lots

\$1,000: .05 lots

\$1,500 to \$2,000: .1 Lots

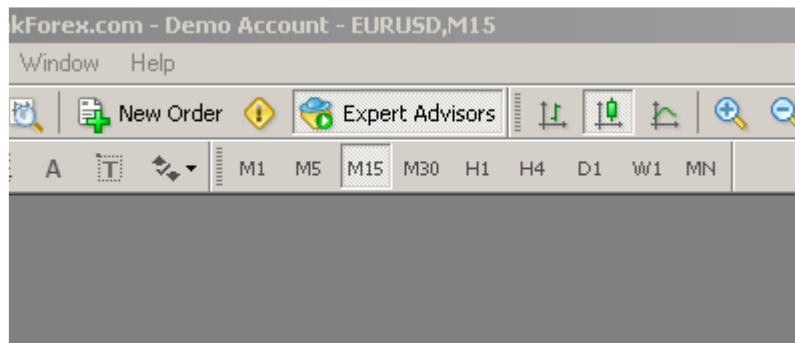

Keep in mind the lower the lots are the safer the risk, but least return. Higher the lots, the higher the risk.

If you would like to increase lot sizes to attempt to increase profits, feel free to increase lots at your own risk.

Next click OK when you have completed editing settings.

You are all setup!

Just make sure the Expert Advisors button is green as shown below:

Also, make sure you have a happy face on the top right of the chart and on the top left it should say ACTIVE.

On the bottom of your screen you can check Journal tab and expert tabs for errors. If any ever arise feel free to e-mail us and we will help resolve any issues.

Please turn to the next page for setting definitions.

Setting Definitions for Forex Invest Bot

LOT SIZE: This is where you put the lot size or contract size that you would like Forex Invest Bot to bet on each trade. Please use recommendations above.

MAGIC: This is the number used to track trades.

FIFO: If you are using a US Broker FIFO is required, please set it to true, otherwise set it to false. By default it will be false.

Close Previous Session Orders: This option will ask you to close out trades if MT4 restarts.

0 – Will not ask to close.

1 – Asked to confirm then close.

2 – Automatically close on restart.

Internal Controls: Will check constantly to make sure lot sizes and trades match that of the internal robot conditions. If you make change or if anything goes wrong, this will help rectify the issue.

If internal controls are OFF, then logic of EA can be thrown off if any adjustments are made to trades. If trades are closed manually please restart MT4 to make sure no issues arise.

Manual Trade Control: This will turn off the robots ability to close trades. Thus if you close out trades manually or use trailing stop EA it will not have issues, and you will not need to restart MT4. Do NOT change this setting while in open trade or trades will close or be lost control of.

Max Trades Per Side Allowed: This function allows you to put a limit on the number of trades opened at a time on buy and sell trades. No need to really touch this as max trades open usually are a small amount.

BotComment: Allows you to set the trade comments for each trade.

Fast Volatility Base: period in bars for Fast Volatility, this may not make sense as this is part of the strategy that remains a secret, but access to this lets you tweak the robot to test and improve performance.

Volatility Factor: Fast Volatility Base to Slow Volatility Base ratio. This is part of the strategy and thus may not make complete sense, but used for tweaking.

Support Fast Volatility Base: This is the same as Fast Volatility mentioned previously, but controls the trailing system for locking in profits.

Support Volatility Factor: This is the same as Volatility Factor, but also controls the trailing system for locking in profits.

Profit Target: Value of the profit target for each trade. This is a percentage the lower the percentage, the lower the take profit. Profit target is dynamic and hidden from the broker.

Stop Los: Value of the Stop Loss for each trade. The lower the stop loss percentage the lower the stop loss will be used. Stop loss is dynamic and hidden from the broker.

Profit Loss Volatility Base: Period in bars for calculation profit target & stop loss. EA calculates High and Low for Profit Loss Volatility Base with this number of bars and then use it as base for Profit Target & Stop Loss.

Smart Entry: Set TRUE by default a smart entry system that includes a cushion of safety to help filter out false signals.

Re-Invest Capital: This will increase the lot size as the account grows, essentially a method of Money Management.

THANK YOU AND GOOD LUCK!
