PREPARATION NOTES

You must activate REV Trader PRO for your account regardless of whether it is a DEMO or LIVE account. You can only use one account per license at a time, but you can switch accounts whenever you would like to.

REV Trader PRO does not trade every day. It trades on average 200 to 300 times per year.

Please follow risk and / or lot size recommendations for safest results, but you can of course adjust it according to your risk appetite.

You will need to install Meta Trader 4 platform, which is absolutely free and provided by most Forex brokers. Consider checking out one of the recommended Forex brokers in members' area for best results.

Meta Trader 4 must be open and running 24 hours a day while the Forex market is trading. This means your computer must be on and not sleeping. Alternatively you can use a VPS, which is a virtual computer, and then this is not an issue. You can find recommendations in members' area.

TROUBLESHOOTING ISSUES

REV Trader PRO is fairly easy to setup. But one issue that rarely arises, which is quite minor, is the software not showing up in the Meta Trader 4 platform.

For now you can skip over this, unless you run into this issue. Here's how to fix it.

1. Run the REV Trader PRO installer and select Add MT4 folder when it prompts you to select where to install.
2. Select your Desktop folder, and then click OK. Now complete the installation.
3. Open Meta Trader 4 and click File, Open Data Folder, then double click MQL4.
4. Place the files from the Desktop into the respective folders, Experts -> .EX4
Libraries -> .DLL.
5. Now run Meta Trader 4 and problem solved.

RECOMMENDATIONS

You will need a few items before installing REV Trader PRO

- Pick a Forex broker... I have a few recommendations in members' area.
- Install Meta Trader 4 (provided by your broker free).
- Use a VPS (virtual computer). A recommendation, not urgent to utilize.

Forex Broker for US Traders: [Click Here To Sign Up](#)

Forex Broker for International Traders: [Click Here To Sign Up](#)

Recommended reliable VPS service: [Click Here for VPS](#)

Install Services (Have someone install REV Trader PRO): [Click Here](#)

HOW TO INSTALL REV TRADER PRO

STEP 1: Click on the REV Trader PRO EXE from the ZIP file.

STEP 2: Click NEXT until you reach the terms, and agree to the terms.

STEP 3: You will have the option to choose, which Broker Meta Trader 4 to install to. Check off, by clicking the box for the broker, to select to install to that Meta Trader 4, if there is no check mark. Uncheck the boxes to the Meta Trader 4's you do not want to install to. Click NEXT until complete.

STEP 4: Next click FINISH.

ACTIVATE REV TRADER PRO – FOR YOUR ACCOUNT

You will need to activate your login number, which is your Meta Trader 4 account number.

You can use only one account at a time for each license you own whether DEMO or LIVE. You can switch accounts anytime.

Go to <http://www.revtraderpro.com/activation.php> to activate your license.

You can now proceed to setup REV Trader PRO in Meta Trader 4, further instructions on the next page.

MAKE SURE META TRADER IS SETUP PROPERLY

Here's a few settings to check for in Meta Trader 4 to make sure everything is OKAY.

Click TOOLS, then OPTIONS, then click EXPERT ADVISORS

Make sure the check marks match that of shown below:

You will need to open 4 trading charts in Meta Trader 4. They look like the image below. To open a new chart please click FILE -> NEW CHART... and open:

EUR/USD, AUD/USD, GBP/USD, NZD/USD

Click on each chart that popped up and click **H1** at the TOP middle bar of MT4.
You must do that for each chart individually.

On the left screen you will see the following under the Navigator Box. Click the [+] next to Expert Advisors.

Look for REV Trader PRO in the list. Click REV Trader PRO and drag it to each chart on the right that you opened. **(Please read next part before completing this step)**

Make sure the check marks match the image below for the window for each chart (click Common):

Next, click Inputs. You will need to load settings for each pair. Click LOAD.

Once you click LOAD, a box will come up to search for the .SET files which hold the settings. They are in your ZIP file that you found this manual. Be sure to drag and drop the .set files onto your desktop from the ZIP file to easily find them. Then click Desktop right in this box. For the chart you are using for example EUR/USD make sure to Load the EUR/USD set.

After loading the set, please click OK. And the robot will activate and turn on. And it is then completely automated.

Please read the next page for settings descriptions and how to adjust risk after you have loaded the set file. Do NOT set risk until after loading set file (if you choose to change from default risk).

SETTINGS

I do not recommend changing any settings other than the risk / lot size settings unless you have trading experience. You can optimize this robot for its current pairs and for other pairs. I have given you access to almost all of the robots capabilities.

GENERAL SETTINGS

Enable Alert – Box opens notifying you of robot actions.

Enable Notification – Turns on sounds for alerts.

Enable E-mail – You can have the robot send you an e-mail when trades occur. You must set the e-mail you would like to use in Tools -> Options -> Email.

Corner – Select where you want the stats box to show on each trading chart.

TradeMagic – This is the unique magic number so the robot can identify its trades. You can leave this number the same for each pair. Just make sure it's not the same for other robots you may be using.

ECN Mode – If your broker is an ECN broker this must be true. It will open a trade, then set SL and TP.

Order2Distance - Number of pips to wait if drawdown occurs before entering another trade on same signal.

Order3Distance - Number of pips to wait if drawdown occurs before entering another trade on same signal. Stops at 3 trades max. You can of course turn this off and Order2 by increasing the number significantly.

SL – This is a hard safety stop loss.

MONEY MANAGEMENT SETTINGS

Money Management – When set to TRUE the robot will auto calculate lot size based on the percent risk you choose in the setting below this one. If FALSE, then you can use a set lot size using the Lots setting below this.

Percent_Risk – The percentage of risk you would like per trade.

Lots – The exact lot size to use for each trade.

Slippage – The maximum slippage you would like to allow for each trade. Lower number can cause missed trades on certain brokers if they have history of excessive slippage. But can protect you in many cases.

HIGH LOW INDICATOR SETTINGS

SignalGap – The number of pips to wait between trade signals.

MinChannelDistance – The distance between buy and sell signals in order to consider trading.

STOCHASTIC INDICATOR SETTINGS

UseStochFilter – Turn on and off Stochastic filter.

Other Settings – Only adjust if you are experienced.

MA INDICATOR SETTINGS

UseMAFilter – Turn on and off MA filter.

Other Settings – Only adjust if you are experienced.

TRAILING SETTINGS

TrailingStopStartPips - The number of pips in profit to start trailing stop system.

TrailingStopPips – The max number of pips to trail for.

TrailingStopStep – At each level of profit gained after trailing start stops, stop loss is moved up further to this number.

LAST CHECK CONFIRMATIONS

Make sure the Expert Advisors button is pushed in and GREEN.
And for each chart it should show H1 indented.

On the bottom of your screen you can check Journal tab and Expert tab for errors.

The robot will then load up and show the following message. If market is closed it will be stuck here until market opens. When market opens it will show more data. The padlock is normal and means your license is activated.
