

EAKAIN USER GUIDE

- INSTALLATION -

Please follow this users guide to install correctly EAKAIN SCALPER PRO.

1 Extract the file “**EAKAIN.zip**”, you'll get a windoe similar at this:

2 Open the Metatrader4 folder and enter inside “experts” folder;

3 Copy the file “**EAKAIN_XXXXXX**” (ex. For XXXXXX - USDJPY) inside the "experts" folder, as it's shown on the figure below:

4 Copy the file “**scalper.dll**” inside the “libraries” folder, as shown on the figure below:

5 Open MetaTrader4;

6 Open charts that you want (EAKAIN SCALPER works on: **EURCHF, EURUSD, USDCHF, USDJPY** – depend on what you have buy) on **Timeframe M15**.

7 Drag and Drop “**EAKAIN_XXXXXX**” on the charts you want and check if in the General Settings values are set as shown:

8 Below a description for each parameter:

- **AutoGMT_Offset**: Set Automatically the GMT Offset Calculating it using the windows system clock. *That's the why because it's important to have set correctly windows system clock.*

- **GMT_Offset**: If “AutoGMT_Offset” is “true”, this value will not be calculated.. Otherwise, if “AutoGMT_Offset” is “false” you'll need to set it manually. (GMT Offset is the difference between GMT Time and Broker Time).

- **Aggressive**: if it's “false” the EA will use only 1 strategy, that is the more conservative. If it's "true" EA will use other strategies more aggressive, so it will make more trades with higher potential profit but also with an higher risk.

- **NFA**: If your broker is NFA regulated, you need to activate this option. If you activate it, the EA will not put the takeprofit and will work only with 1 strategy even if you set Aggressive at true.

- **Risk**: It's a percentage value on the FREE Margin available. it set how much risk must work the expert advisor. For example, if it's at 10 with a starting capital 5000 dollars, EA will open 0,50 lots.

- **FixedLots**: If it's at 0, EA will calculate lots on the base of "Risk" Value. If you set a number, value "Risk" will not be used.

- **MaxUsedMargin**: It's a percentage. If, for example, it's set at 100, expert will use the 100% of the FREE Margin available. If it's set at 50, EA will use only 50% of the Margin, leaving free the other 50%.

- **MagicNumber**: EA need this value to identify the trades, it's very important that they will not be the same. For this 'cause we put different numbers for each strategy.

- **Slippage**: It's the max difference pips number where EA should close the trade at the price level he wants. The greater the number, the greater the possibility to close loosing trades.

- **Visible_Comments**: If it's set at “true” will be shown comments on the terminal.

NOTE

- EAKAIN SCALPER detect automatically 4 or 5 Digits;
- We suggest to set "AutoGMT_Offset" at "true" (be sure your windows system clock is set correctly);
- EA is totally automatic, we suggest to not close manually any trades;
