

Installation

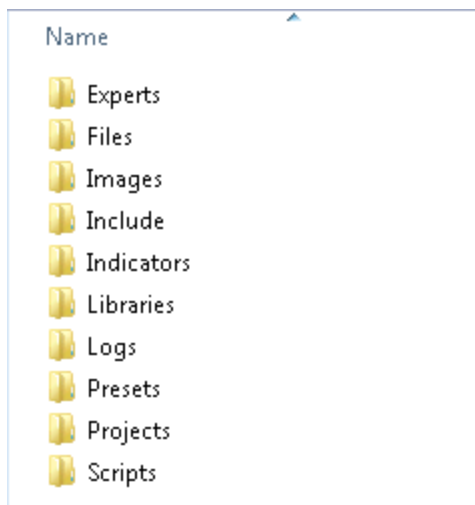

To install the indicator(s) in your mt4 you need to open the data folder of mt4 by clicking on “File -> Open Data Folder”:

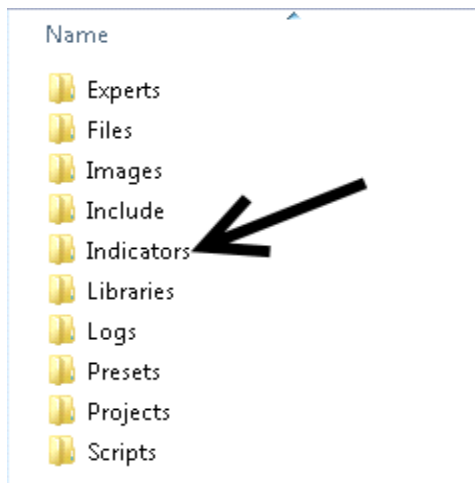

After that a windows explorer instance opens:

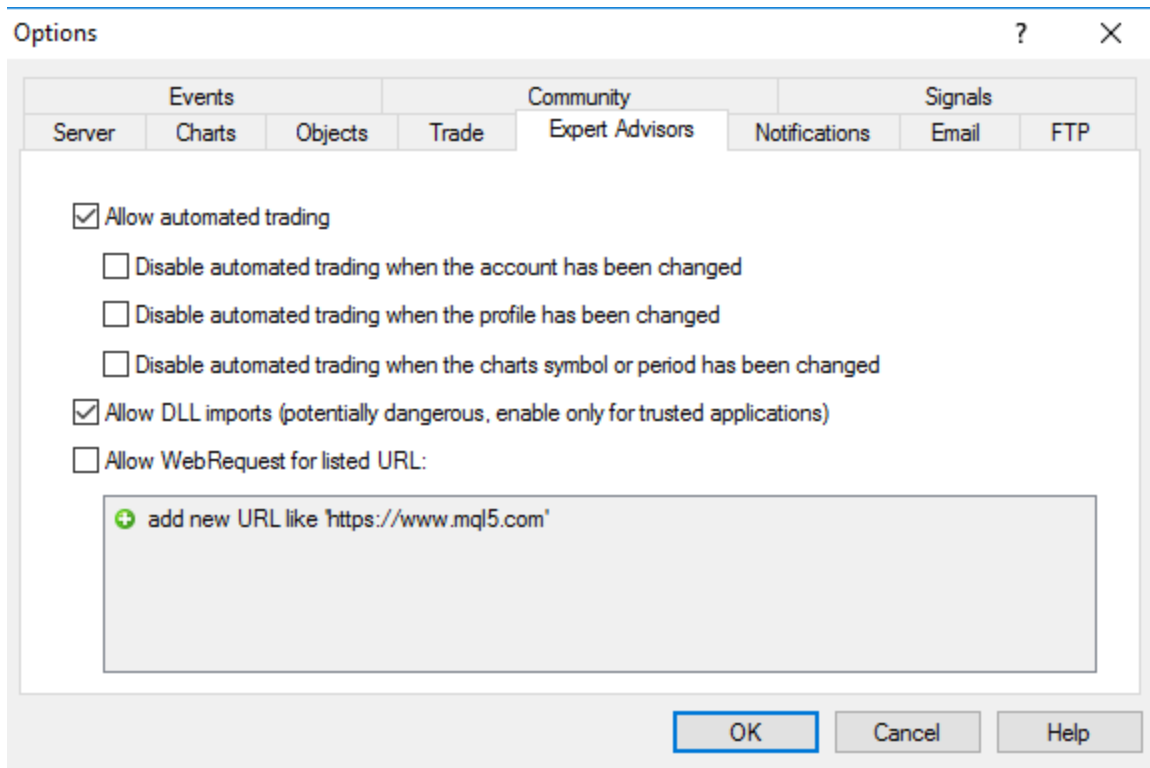

You need to navigate into the MQL4 folder. Then you will see following folder structure:

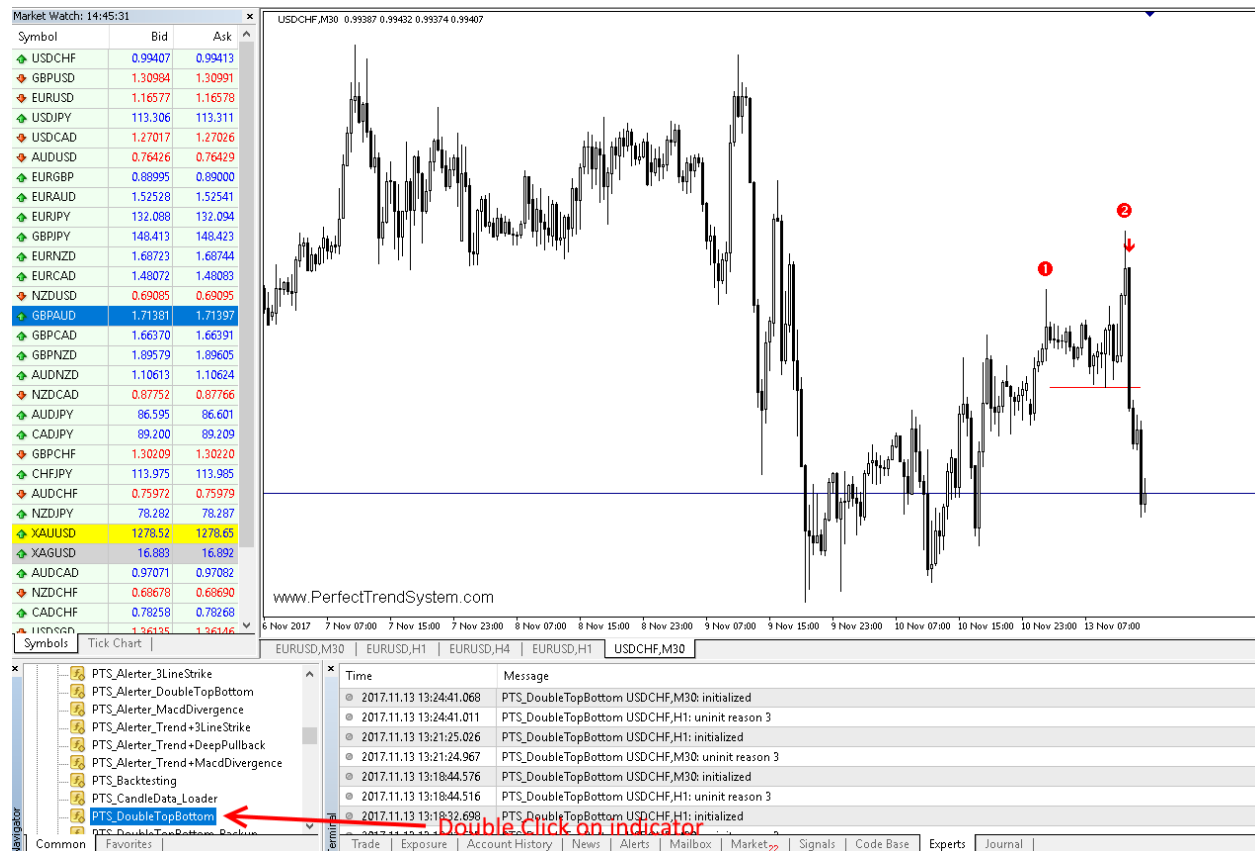

The indicator file(s) need to be copied into the “Indicators”-folder:

After that you need to allow DLL imports in MT4. Please navigate into the menu “Tools -> Options” and make following configuration in the card “Expert Advisors”:

And after that, of course you have to put the indicator on the chart:

The indicator can be used on different accounts but the indicator is bound to one account number per day until 0 GMT. At 0 GMT the account number is reset on the server side. After the reset you can use the indicator on a different account.

Example: Today you use the indicator on account 111. At 0 GMT the server resets the account. Tomorrow you can use it on any other account number e.g. 222

Cheers and Happy Trading 😊

Mike

Power Tip!!!

If you already use the [Double Top/Bottom Alerter](#) with which you will no longer miss the setups, even setups on lower timeframes like M5 and M15, then here is my best practice:

- place the alerter on one chart and configure it to alert all signals for the timeframes $\geq$ M30
- place the alerter on an additional chart and configure it for alerting only the timeframe M15
- and place the alerter on third chart and configure it for alerting only the timeframe M5

Then you will have 3 charts on which the alerter is running. Then alerter will give the signals for M5 and M15 a lot faster, because it will check for signals more often.

1 Parameter Added

To reduce the calculation time / computer resources I have added a parameter with name “candlesCalculated” which is set to 1000 by default.

Variable	Value
 PTS_DoubleTopBottom	Detects Double Tops/Bottoms :)
 candlesCalculated	1000

The value 1000 means that the indicator will only show double tops/bottoms on the newest 1000 candles of the chart. If you want to see the double tops/bottoms also on older candles then you must set a higher value.
