**SUPPLY AND DEMAND TRADING WITH MECHANICAL INDICATORS AND
OSCILLATORS IN THE FOREX MARKETS**

Governing Dynamics of Supply and Demand

A – Price support (demand) level

B – Rally in price tells us there are more buyers than sellers at price level "A" (demand exceeds supply at "A"). There can be no other reason for the price rally. Therefore, if and when price returns to "A", the astute buyer is offered a low risk / high reward buying opportunity.

C – Price revisits the support (demand) level for the first time. At "C", an ill-informed seller sells to an astute buyer. The buyer at "C" enjoys a low risk / high reward buying opportunity.

The educated trader typically gets paid from the trader who has no education, no plan, and who trades on emotion.

FOREX SWING TRADING, LOW RISK HIGH REWARD TRADING IN THE LARGEST

FXStreet Webinar

2008/06/19

UNDERSTANDING THE CREATION OF CANDLES IN FOREX TRADING

About the left pivot low: Prices rallied from that level because demand greatly exceeds supply. In fact, the imbalance is so strong that you only get a pivot there, there is no basing.

FXStreet Webinar

2008/07/10

SHORT TERM FOREX TRADING STRATEGIES, BREAKOUTS AND REVERSALS

About the left pivot low: Prices stay there for a very short period of time and then shoot up. The pivots are going to be much better than the bases because price only spends a very short period of time there because supply and demand are so out of balance. We want to be entering on the first pullback.

TRADE WHAT IS REAL, NOT WHAT YOU FEEL

Governing Dynamics of Supply and Demand

Bank (dealer)
Demand

Novice Seller

Objective Rule Based Analysis

- 1 - Selling after a decline in price = NOVICE selling
- 2 - Selling at demand = NOVICE selling

Buy from a novice seller

Governing Dynamics of Supply and Demand

Supply from Banks, Central Banks, and Institution

The novice buyer here is buying **AFTER** a rally in price and **INTO** a price level where supply exceeds demand.

The astute Forex speculator sells to the novice buyer.

Forex XLT: Day/Swing/Long Term

Long Entry: 1.7600

Target: 1.8600

Hi Sam,

I got out of GBPvUSD for 300 pips eventually. I got in again and made another 100 before I closed the position at just under 1.85 as it was getting into the resistance so 400 pips profit in total - GREAT.

J. Clarke - UK, 9/23/08

Risk: Low

Reward: 1000 pips (\$10,000 for a 1 lot)

PROFESSIONAL GAPS VS. NOVICE GAPS IN THE FOREX MARKETS

A gap is the ultimate picture of the S/D imbalance. A novice gap is a gap after a move in price in the direction of that move. This is the picture of a novice gap (buying into resistance).

A pro gap is a gap in price after a move in the opposite direction of that move. This is the picture of pro gaps. We want to join pro gaps and fade novice gaps.

**AN IMPORTANT RULE TO CONSIDER WHEN SCANNING FOR TRADING
OPPORTUNITIES IN FOREX**

This is an example of what is NOT A GOOD LEVEL.
Reasons: Profit margin is not good enough (shaded area) + price left the level gradually.

Same chart but level is higher up in the curve. This is A GOOD LEVEL because price tanked in a strong fashion and profit margin is higher (3:1 or better).

This is A GOOD LEVEL because the profit margin is very good + price blasted off from the level.

This is another example of what is NOT A GOOD SUPPLY LEVEL.
Reason: Profit margin is not good enough (shaded area).

Same chart but level is higher up in the curve. This is A GOOD LEVEL because price tanked in a strong fashion and profit margin is higher (3:1 or better).

This is A GOOD LEVEL because profit margin is very good + price blasted off from the level.

SUPPLY, DEMAND, AND BOLLINGER BANDS

Levels on top of levels: always take the more distant levels as it will take a bigger amount of demand to reach the key supply level due to the speed bumps of supply in the circled area, so there'll be less buyers when price gets there.

SUPPLY AND DEMAND STRATEGY APPLICATION

Price is at a weekly demand level, so feel comfortable taking very short TF demand levels.

If price revisits a level but barely touches it, not entering deep into the zone, and turns, this is a very good level and we could expect price to come back and bounce again. As a rule of thumb, once price penetrates 50% or more into the level, you probably want to stop taking it. .

FXStreet Webinar

2010/12/23

BREAKOUT TRADING IN FOREX

The picture of a very good quality level: RBD, level on top of level and a strong drop in price.

Price dropped and went thru the first couple of demand levels on its way down (circled areas). This tells us the origin of the price drop is *probably* a decent supply zone.

FXStreet Webinar

TRADING AND ANALYSIS

Example of a smaller TF supply level formed near larger TF supply. High probability trade.

The level below might not be a great level because of the wick to the upside. This tells us that the supply at the level might not be that great. Otherwise, price would not have been able to trade higher above the level.

Later on, price actually turned at the level.

SHORT TERM MARKET TIMING IN THE FOREX MARKET

The three essential factors for short term success:

- **Location** (big picture)
- **Structure** (quality of the smaller TF - odds enhancers)
- **Profit Margin**

The structure of the 2M supply level is good, but it is close to larger TF demand, so be careful.
