

Atom Forex Expert Advisor User's Manual

Things you should know using EA Atom!

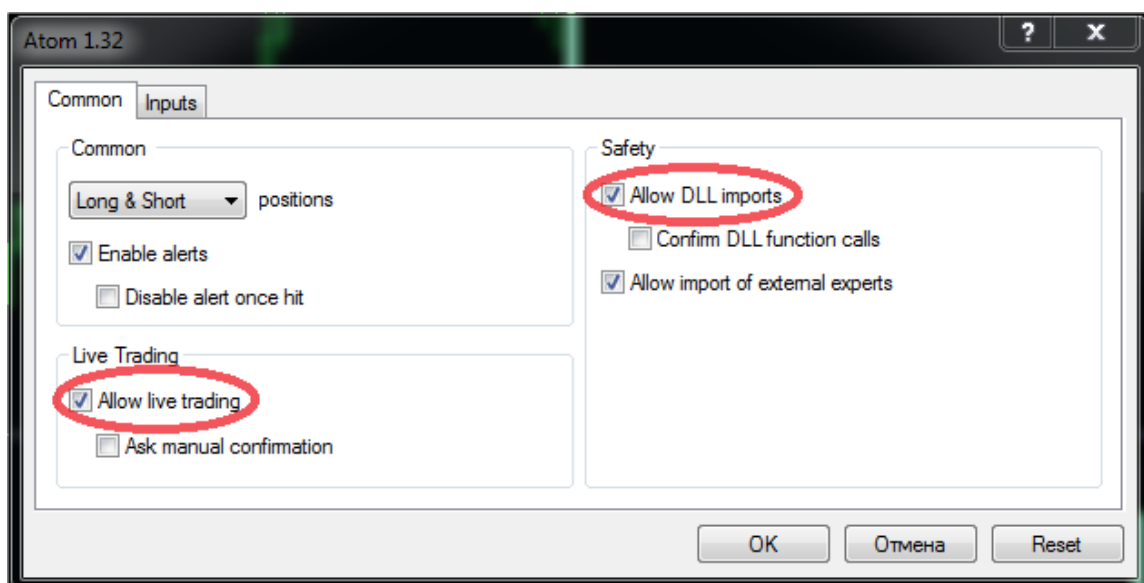

1. The main feature of EA Atom is that it trades every day and every day it will bring a stable income you have specified by yourself. For example, $150/21 = 7.14\%$, where "150" is your monthly income percent specified, and "21" is the average number of trading days in a month. As the result, you will consistently receive 7.14% per every day.
2. EA Atom includes 9 trading sessions. But for you not to be confused with the choice of appropriate session, we have created the intellectual system, which automatically determines which trading session should be used, taking into account the income percent you have specified in the beginning. EA Atom by itself selects the most reliable and suitable sessions. You can switch the auto selection off and manually specify which session you want to use.
3. Advisor is equipped with the error notification. Due to this function, the system will warn you if something goes wrong. It also automatically switches between five digit and four digit quotes.
4. The minimum deposit for a broker with lot 0.01 is 800\$.
The minimum deposit for a broker with lot 0.1 is 8 000\$.
The minimum deposit may vary from 100 \$ to 800 \$. It depends on the trading session you will use.
5. **Do not turn off the expert advisor when at least one order is open.** Advisor monitors all orders and takes the necessary steps, depending on market conditions. If the advisor is not active, it can break trading logic. Also make sure that you have stable internet connection.
6. **After the EA is installed, it may not immediately start trading. EA Atom trades only during certain hours, depending on the selected time zone and trading sessions.**
7. **Attention!!!** The advisor is protected by the special method, that's why any attempt to use crack advisor may bring loss of money! **This protection program doesn't allow you to make a backtest, but you can trade on a demo or real.** Backtest results and real trade can be found on the official site: www.forex-atom.com
8. This EA is designed for MetaTrader4 platform.

1. The Advisor preparation and usage, sets installation

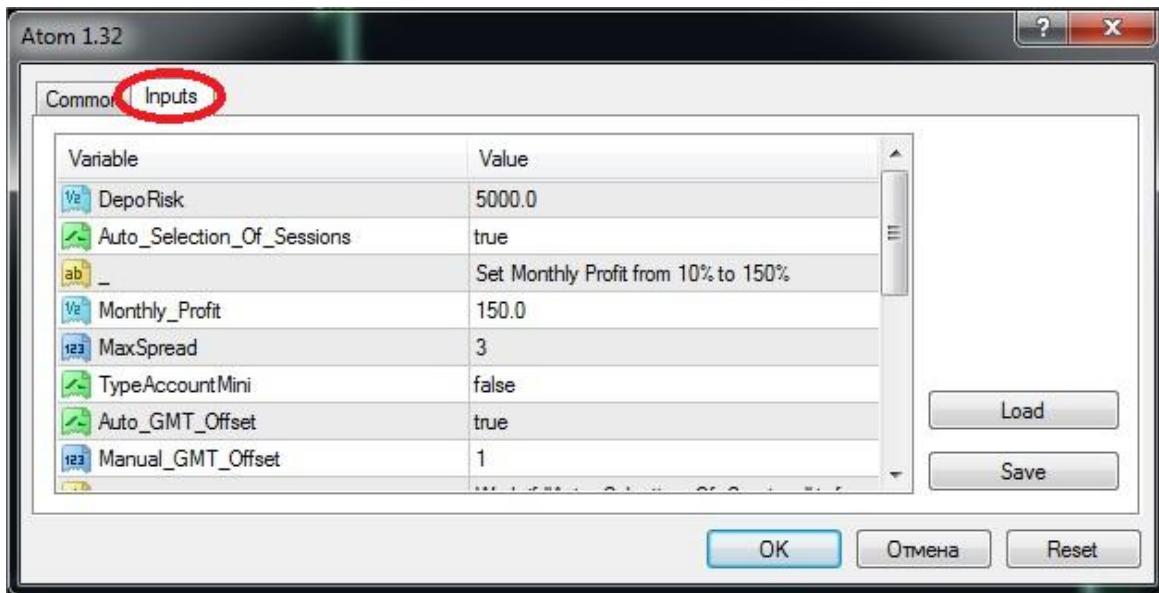

- 1.1 Open the archive that we send you and run the Installation File.
- 1.2 In the following window enter the path to your MetaTrader folder.
- 1.3 After finishing of installation, run the trading terminal (MetaTrader).
- 1.4 Open the EURUSD pair. Time Frame H1 (1 Hour).

- 1.5 In Navigator window click twice for Expert Advisors and Atom 1.32 then. The following window will appear.

- 1.6 Choose the check box "Allow live trading" and make sure the check box "Allow DLL imports" is also chosen.
- 1.7 Move to Inputs tab. The list of all possible parameters for the expert advisor is available here. Specify the settings according to your wishes and risks and press OK.

1.8 Make sure that the button "Expert Advisors" is enabled. Smiling FACE at up-right corner of a chart means that EA is set up and ready to trade. Comments in left part mean that EA is work. If button "Expert Advisors" is enabled and you have smiley face, but no comments in left part, you need to restart Meta Trader.

Be advised! The EA can make different results on different Brokers. It depends on their spreads, different quotes and other trading terms.

2. Parameters for user manipulation

DepoRisk - With this option you can set risks. Each trading session will use only the amount of money that you specify in this parameter.

Auto_Selection_Of_Sessions - If set true, the parameter **Monthly_Profit** works. If false, does not work.

Monthly_Profit - Set Monthly Profit from 10% to 150%. The profit is settled according to risk, which is specified in parameter **DepoRisk**. An example. You have 10 000\$, but you specified to **DepoRisk**=5000\$ and set **Monthly_Profit**= 50%. Calculation of interest is on the following formula: $5000\$ (\text{DepoRisk}) * 50\% (\text{Monthly_Profit}) / 100 = 2500$. Where 2500 is the monthly income you will receive.

MaxSpread- The maximum spread at which advisor will trade

TypeAccountMini - Set true, only if the type of your account is mini.

Auto_GMT_Offset - If set true, system will automatically determine GMT of your broker, compare it with Greenwich (**Recommended**). If set false, system use parameters from **Manual_GMT_broker**.

Manual_GMT_broker – Manual setting of time zone.

Here you can enable or disable the trading session, as you want. Works only if **Auto_Selection_Of_Sessions** is false.

Troubleshooting:

Messages that pop up or are written in the journal Expert:

"Cannot load library 'atmd.dll' (error 126)"

It means that you don't load DLL file to <MetaTrader folder>/experts/libraries.

"Can not load parameters from DLL . Restart your MetaTrader!"

If restart don't helped, try to change MetaTrader language in to English. Expert Atom not working with some of languages.

"Function 'IsDemoAccount' call from dll 'atmd.dll' critical error"

If you have such problem, please contact us : support@forex-atom.com
