Or Try to follow this video guide: <https://www.youtube.com/watch?v=bATN4WRkfwk>

Trading Modes

System provides three different trading styles (templates) depending on your expectations, risk appetite and experience in trading.

GHOST1 (Standard)

Is the most universal mode, providing the most balanced signals. It provides stable signals with limited risk. This mode is recommended for beginners as well as experienced traders.

GHOST2 (Fast)

It's characterized by the fastest signals as well as the largest potential profit with increased risk. If you are familiar with scalping and catching the quick market movements, you should choose this trading mode.

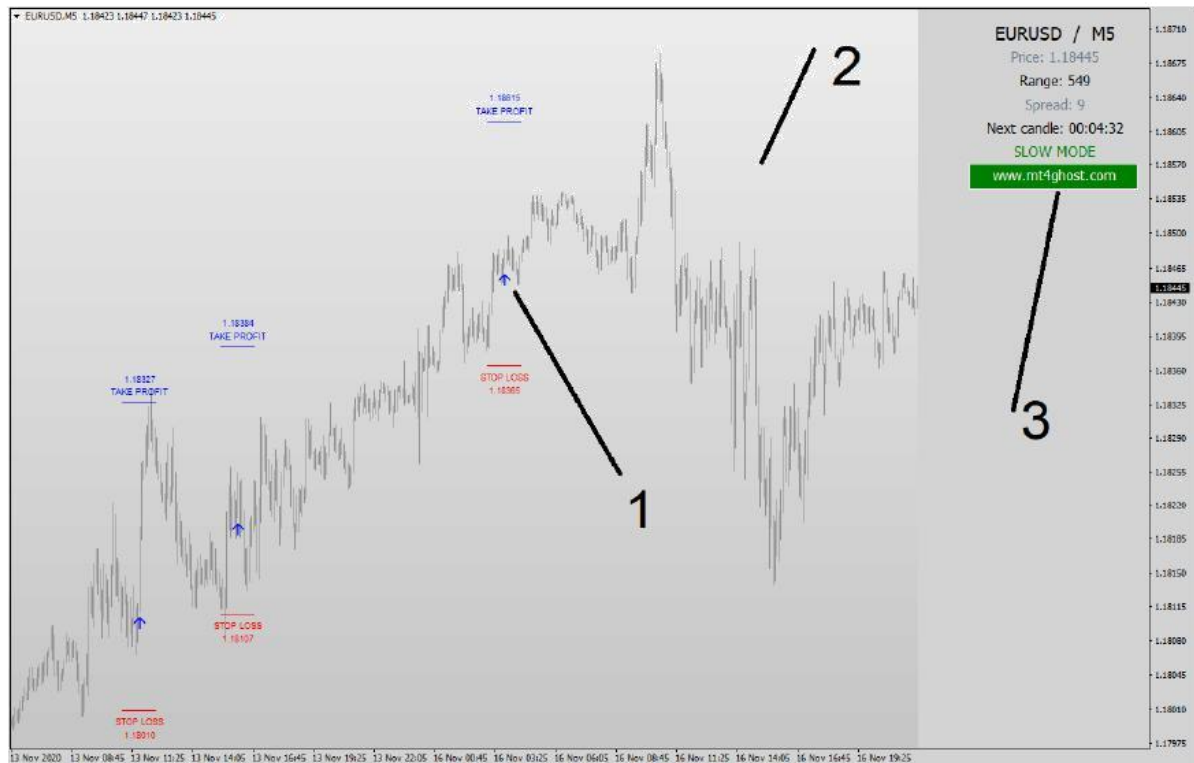

GHOST3 (Slow)

Provides the most secure signals, with less profit potential at the same time. Pick this mode if you want to spend the minimum amount of time in front of the computer. This mode is recommended for every type of trader.

System overview

System contains three indicators.

1. Entry/Exit Indicator.
2. Background.
3. Info panel.

HOW DOES IT WORK. Entry Examples.

Wait for a signal produced by the entry indicator.

System is very easy to use.

BUY ENTRY EXAMPLE: BLUE arrow shows up. It's a valid BUY signal.
You will be notified about Entry/TP and SL levels.

When a price hits TP or SL level, the system will look for another entry.

Handful of advice

- Before trading, always make sure that the market does not expect any important data. If something 'big' appears in the news calendar, it's better to wait for their announcement and later join to further movement
- Always try to trade on major sessions when the volatility is the greatest
- Try to not overtrade. Do not keep more than 2-3 trades at the same time
- Background indicator is for visual purpose only. You can of course turn it off
- You can change indicator colors in the settings
