

INDICATOR GUIDE®

Welcome to the Unlimited Forex Wealth **Indicator Guide**

In this trading guide you will learn to use our state-of-the-art indicator to speed-up the trading of the Unlimited Forex Wealth strategy, and increase your efficiency.

You will learn to:

- 1.** Install the Indicator in MetaTrader ® platform.
- 2.** Interpret the Messages of the indicator.
- 3.** Change the settings of the indicator
- 4.** Set up sound and email alerts.

Installing the Unlimited Forex **Wealth** Indicator

Unlimited Forex **Wealth** requires the “MetaTrader 4” trading platform which is freely available here:

CLICK HERE TO DOWNLOAD METATRADER

Follow the instructions and open a demo or real account. We recommend trading the indicator on demo account before proceeding to real accounts

Once the file has been extracted you need to locate the folder where you installed MetaTrader on your computer.

As standard, MetaTrader is installed under the **Program Files** folder, which is usually under the C: hard drive:

C:\Program Files\MetaTrader Folder

Examples:

If you are using Interbank FX Trader, the folder will be at
C:\Program Files\Interbank FX Trader 4\experts\indicators

If you are using Alpari MetaTrader, the folder will be at
C:\Program Files\MetaTrader - Alpari\experts\indicators

If you are using FXDD, the folder will be at
C:\Program Files\FXDD - MetaTrader 4\experts\indicators

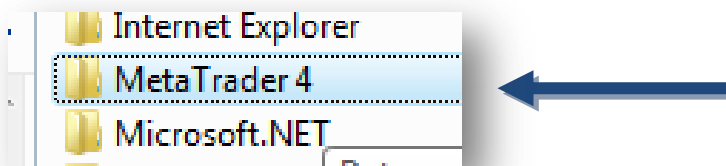

Unless you have deliberately chosen a different location, the **Primary Path** (C:\Program Files) will always remain constant. The only variation appears in the newer 64-bit (x64) versions of Windows where older, 32-

bit applications such as MetaTrader 4 are installed into the “C:\Program Files (x32)” folder.

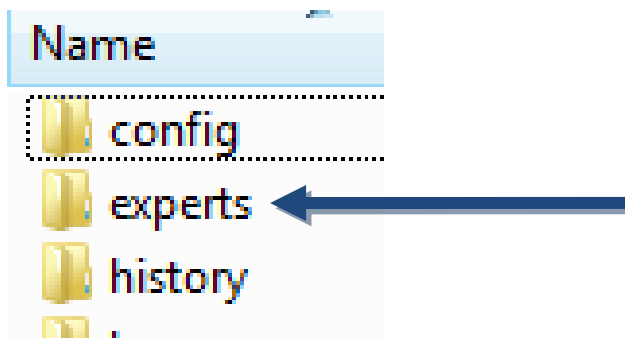

However, the **Application Folder** varies for every broker providing MetaTrader 4. But don't worry - if you are not certain where your installation is located then there's a simple way to find out:

Position your mouse cursor directly over (do **not** click!) the icon on your Windows Desktop that you use to start MetaTrader 4...

Once you have found your Metatrader4 folder open it

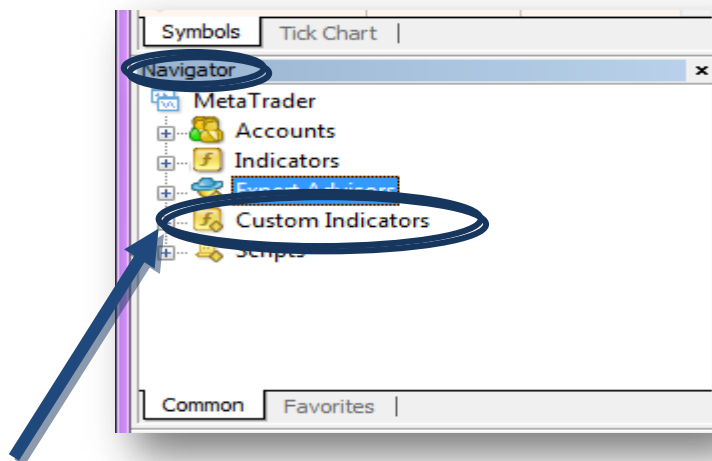

Open the **EXPERTS folder located inside the Meta trader folder**

Copy **UltimateForexWealthIndicator.mq4 and paste into the Experts folder**

If your MetaTrader is open, close it and then re-open.
Check the **Navigator** pane on the left side of the MetaTrader 4 window

You should see the **UltimateForexWealthIndicator** © at the Custom Indicators folder. Double click on the indicator and click OK to load it onto your chart.

Here is a **video** showing how to install indicators in MetaTrader platform:

Trading the Unlimited Forex **Wealth** Indicator

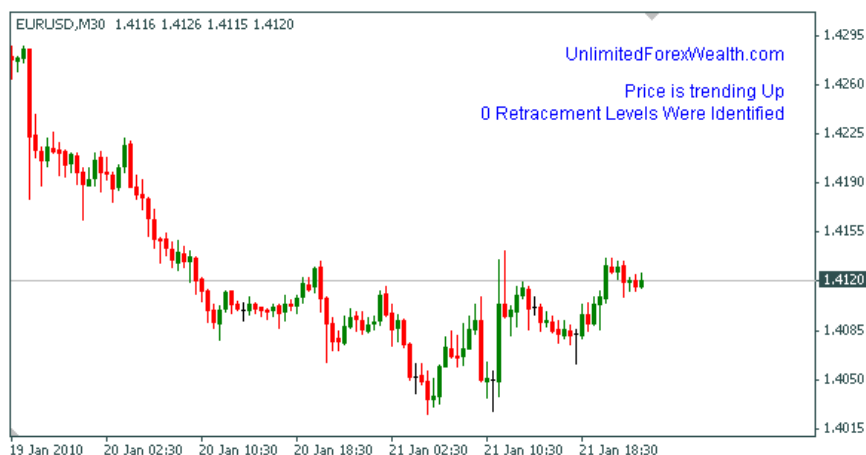

The Unlimited Forex Wealth indicator is designed to automatically identify the trading setups described at the strategy guide. It automatically identifies strong trends, filters out range periods, identify local highs and lows, and alerts you when price retraces to a local high\low so you can enter a trade.

However, it is important to note that despite its accuracy no indicator can replace a human being, and it is needed to confirm the signals manually before entering them, to make sure they fit the entry criteria. A human can also identify trades that the indicator would miss, due to its mechanical nature.

Interpreting the Messages of the indicator

After installation and attaching the indicator to the chart, you should see the indicator label 'UnlimitedForexWealth.com'.

The indicator also identifies trends and ranges, and will write whether the pair is trending up, down or in a range (flat trend with no momentum). If the pair is in range it is recommended not to take any trades.

Identifying Retracement Levels

The indicator automatically identifies levels which price has broken, which we will enter when price re-tests them.

These levels are marked on the chart by a horizontal, dotted line.

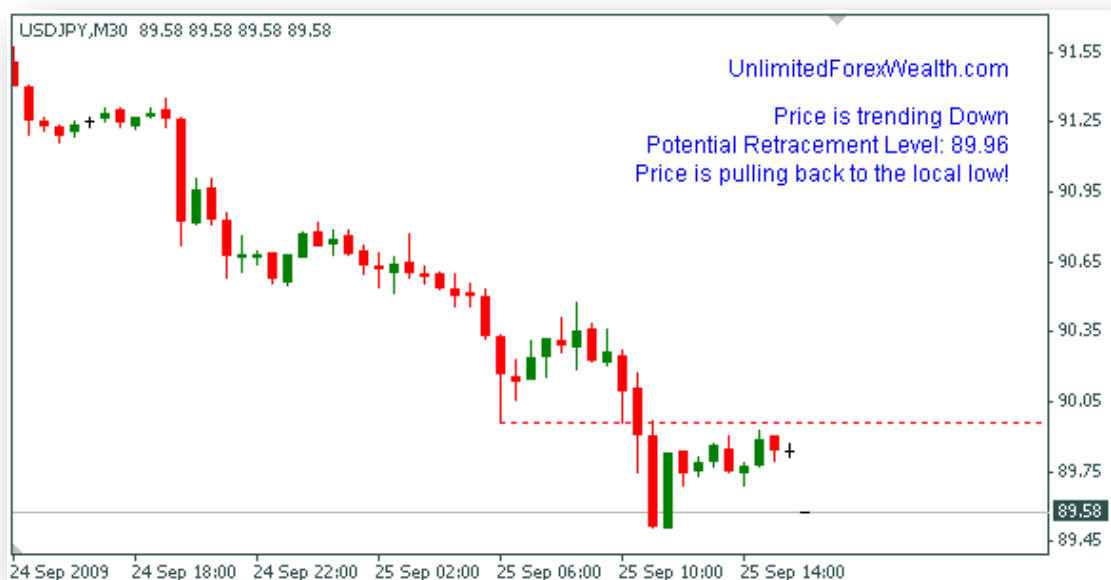

When price retraces to such level, you will see a message on the screen. For example: 'Price is re-testing a local high, prepare for Long

trade'. A sound alert will also be issued, to alert the user that a signal is taking place.

The Indicator identified a new high and alerted when price touched

Price retraced to a temporary low, touched it – and continued downwards. The indicator alerted the retracement early and allowed an early call of the downtrend.

Settings of the Indicator

There are several settings you can change in the indicator. You can reach the settings screen by clicking on the 'Inputs' tab when loading the indicator onto the chart:

- **LabelsColor** – handles the color of the labels that appear on the screen. Change to any color that you are comfortable with.
- **Font.Size** – Size of the font in the labels.
- **Sound.Alerts** – Set to 'True' If you wish to receive sound notifications, or 'False' otherwise.
- **Email.Alerts** – Set to 'True' if you wish to receive email notifications when a signal occurs. Read the next chapter to set the email settings properly.

Email Alerts

The UnlimitedForexWealth Indicator can send emails when it generates alerts. As a default this feature is turned off. To receive email when the UnlimitedForexWealth Indicator issues signals, do the following actions:

1. Enable Email Alerts. In the '**Inputs**' tab, set '**emailAlerts**' to True.
2. Click on '**Tools**' and '**Options**'.
3. Click on the '**Email**' tab.
4. Check the '**Enable**' checkbox.
5. Ask your Internet Service Provider (ISP) what are his email server details.
6. Click on '**Test**'. You should receive a test email to your inbox.

Tell us what you think!

If you have any suggestion or a feature you would like to have in the next version of Unlimited Forex Wealth, we would love to hear about it!
