

Algo Trading Group
Investment Fund

**Welcome to the “Algo Plus”
Artificial Intelligence**

support@algotradinggroup.net

Congratulations on purchasing Algo Plus Artificial Intelligence. We will you all the best and profitable year ahead. You will receive frequent updates and set files as we adapt this algorithm every month as market conditions change.

- **Pairs Recommended:** EURUSD, GBPUSD
- **Time Frame:** M1 (recommended) or M5. For more activity, run it on H1 time frame.
- **Other Pairs:** GBPJPY, USDCHF, EURCHF, USDJPY

Setting Explained!

- **Lots Per 1000:** This is the lot size Algo Plus will take per 1000 USD balance. As your balance increases by +1000, your lot size will be increased by + whatever lot size you set. We recommend to leave it as 0.3 per 1000.

- **Lot Size:** If above is set to 0, the lot size entered here will be taken
- **Stop Loss:** This is your SL when trade executes. This will also be your trailing stop. We highly recommend to leave it as default 3.
- **Minimum Lots:** This is the minimum lot size Algo Plus will take.
- **Maximum Lots:** This is the maximum lot size Algo Plus will take.
- **Maximum Spread:** This is the most important parameter. Leave this as default 1.2. You want Algo Plus to execute trades while the spread is at its lowest as this is a HFT based Algorithm. ECN and lowest spread accounts are highly recommended. 1.2 spread for EURUSD and for GBPUSD maximum spread 2.3. If spread is set higher, there are chances of loss as spread can trigger losses. Best to back test with different spread settings first before you run the algorithm. Our recommended brokers are best suitable for this algorithm as they offer our clients lowest spread possible.
- **Magic Number:** If you are running Algo Plus in 2 different charts, change this number to a different number in the second chart.
